# Table of Contents

Terms of Use.....	1
Overview.....	29
Intended Audience .....	29
Consensus Guidance .....	29
Typographical Conventions .....	30
Assessment Status .....	30
Profile Definitions.....	31
Acknowledgements.....	33
Recommendations.....	34
1 Account Policies .....	34
1.1 Password Policy .....	34
1.1.1 (L1) Ensure 'Enforce password history' is set to '24 or more passwords' (Automated) .....	34
1.1.2 (L1) Ensure 'Maximum password age' is set to '60 or fewer days, but not 0' (Automated) .....	38
1.1.3 (L1) Ensure 'Minimum password age' is set to '1 or more day(s)' (Automated) .....	42
1.1.4 (L1) Ensure 'Minimum password length' is set to '14 or more characters' (Automated) .....	46
1.1.5 (L1) Ensure 'Password must meet complexity requirements' is set to 'Numbers, lowercase, uppercase and special characters required' (Automated) ..	50
1.2 Account Lockout Policy .....	54
2 Local Policies .....	54
2.1 Audit Policy .....	54
2.2 User Rights Assignment .....	55
2.2.1 (L1) Ensure 'Access Credential Manager as a trusted caller' is set to 'No One' (Automated) .....	55
2.2.2 (L1) Ensure 'Access this computer from the network' is set to 'Administrators, Remote Desktop Users' (Automated) .....	59

2.2.3 (L1) Ensure 'Act as part of the operating system' is set to 'No One' (Automated) .....	63
2.2.4 (L1) Ensure 'Allow log on locally' is set to 'Administrators, Users' (Automated) .....	67
2.2.5 (L1) Ensure 'Back up files and directories' is set to 'Administrators' (Automated) .....	71
2.2.6 (L1) Ensure 'Change the system time' is set to 'Administrators, LOCAL SERVICE' (Automated) .....	75
2.2.7 (L1) Ensure 'Create a pagefile' is set to 'Administrators' (Automated) .....	79
2.2.8 (L1) Ensure 'Create a token object' is set to 'No One' (Automated) .....	83
2.2.9 (L1) Ensure 'Create global objects' is set to 'Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE' (Automated) .....	87
2.2.10 (L1) Ensure 'Create permanent shared objects' is set to 'No One' (Automated) .....	91
2.2.11 (L1) Configure 'Create symbolic links' is set to 'Administrators' (Automated) .....	95
2.2.12 (L1) Ensure 'Debug programs' is set to 'Administrators' (Automated) .....	99
2.2.13 (L1) Ensure 'Deny access to this computer from the network' to include 'Guests, Local account' (Automated) .....	103
2.2.14 (L1) Ensure 'Deny log on locally' to include 'Guests' (Automated) .....	107
2.2.15 (L1) Ensure 'Deny log on through Remote Desktop Services' to include 'Guests, Local account' (Automated) .....	111
2.2.16 (L1) Ensure 'Enable computer and user accounts to be trusted for delegation' is set to 'No One' (Automated) .....	115
2.2.17 (L1) Ensure 'Force shutdown from a remote system' is set to 'Administrators' (Automated) .....	119
2.2.18 (L1) Ensure 'Generate security audits' is set to 'LOCAL SERVICE, NETWORK SERVICE' (Automated) .....	123
2.2.19 (L1) Ensure 'Impersonate a client after authentication' is set to 'Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE' (Automated) .....	127
2.2.20 (L1) Ensure 'Increase scheduling priority' is set to 'Administrators, Window Manager\Window Manager Group' (Automated) .....	131
2.2.21 (L1) Ensure 'Load and unload device drivers' is set to 'Administrators' (Automated) .....	135

2.2.22 (L1) Ensure 'Lock pages in memory' is set to 'No One' (Automated) .....	139
2.2.23 (L1) Ensure 'Manage auditing and security log' is set to 'Administrators' (Automated) .....	143
2.2.24 (L1) Ensure 'Modify an object label' is set to 'No One' (Automated) .....	147
2.2.25 (L1) Ensure 'Modify firmware environment values' is set to 'Administrators' (Automated) .....	151
2.2.26 (L1) Ensure 'Perform volume maintenance tasks' is set to 'Administrators' (Automated) .....	155
2.2.27 (L1) Ensure 'Profile single process' is set to 'Administrators' (Automated) .....	159
2.2.28 (L1) Ensure 'Restore files and directories' is set to 'Administrators' (Automated) .....	163
2.2.29 (L1) Ensure 'Take ownership of files or other objects' is set to 'Administrators' (Automated) .....	167
<b>2.3 Security Options.....</b>	<b>171</b>
<b>2.3.1 Accounts.....</b>	<b>171</b>
2.3.1.1 (L1) Ensure 'Accounts: Administrator account status' is set to 'Disabled' (Automated) .....	171
2.3.1.2 (L1) Ensure 'Accounts: Block Microsoft accounts' is set to 'Users can't add or log on with Microsoft accounts' (Automated) .....	174
2.3.1.3 (L1) Ensure 'Accounts: Guest account status' is set to 'Disabled' (Automated) .....	177
2.3.1.4 (L1) Ensure 'Accounts: Limit local account use of blank passwords to console logon only' is set to 'Enabled' (Automated) .....	181
2.3.1.5 (L1) Configure 'Accounts: Rename administrator account' (Automated) .....	184
2.3.1.6 (L1) Configure 'Accounts: Rename guest account' (Automated) .....	187
<b>2.3.2 Audit .....</b>	<b>189</b>
<b>2.3.3 DCOM.....</b>	<b>189</b>
<b>2.3.4 Devices.....</b>	<b>190</b>
2.3.4.1 (L1) Ensure 'Devices: Allowed to format and eject removable media' is set to 'Administrators and Interactive Users' (Automated) .....	190
2.3.4.2 (L2) Ensure 'Devices: Prevent users from installing printer drivers' is set to 'Enabled' (Automated) .....	194

2.3.5 Domain controller .....	197
2.3.6 Domain member .....	197
2.3.7 Interactive logon .....	198
2.3.7.1 (L1) Ensure 'Interactive logon: Do not require CTRL+ALT+DEL' is set to 'Disabled' (Automated) .....	198
2.3.7.2 (L1) Ensure 'Interactive logon: Don't display last signed-in' is set to 'Enabled' (Automated) .....	202
2.3.7.3 (L1) Ensure 'Interactive logon: Machine inactivity limit' is set to '900 or fewer second(s), but not 0' (Automated) .....	205
2.3.7.4 (L1) Configure 'Interactive logon: Message text for users attempting to log on' (Automated) .....	208
2.3.7.5 (L1) Configure 'Interactive logon: Message title for users attempting to log on' (Automated) .....	211
2.3.8 Microsoft network client.....	214
2.3.8.1 (L1) Ensure 'Microsoft network client: Digitally sign communications (always)' is set to 'Enabled' (Automated) .....	214
2.3.8.2 (L1) Ensure 'Microsoft network client: Digitally sign communications (if server agrees)' is set to 'Enabled' (Automated) .....	218
2.3.8.3 (L1) Ensure 'Microsoft network client: Send unencrypted password to third-party SMB servers' is set to 'Disabled' (Automated) .....	222
2.3.9 Microsoft network server.....	225
2.3.9.1 (L1) Ensure 'Microsoft network server: Digitally sign communications (always)' is set to 'Enabled' (Automated) .....	225
2.3.9.2 (L1) Ensure 'Microsoft network server: Digitally sign communications (if client agrees)' is set to 'Enabled' (Automated) .....	229
2.3.10 Network access .....	233
2.3.10.1 (L1) Ensure 'Network access: Do not allow anonymous enumeration of SAM accounts' is set to 'Enabled' (Automated) .....	233
2.3.10.2 (L1) Ensure 'Network access: Do not allow anonymous enumeration of SAM accounts and shares' is set to 'Enabled' (Automated) .....	236
2.3.10.3 (L1) Ensure 'Network access: Restrict anonymous access to Named Pipes and Shares' is set to 'Enabled' (Automated) .....	239
2.3.10.4 (L1) Ensure 'Network access: Restrict clients allowed to make remote calls to SAM' is set to 'Administrators: Remote Access: Allow' (Automated) .....	243

2.3.10.5 (L1) Ensure 'Network access: Shares that can be accessed anonymously' is set to 'None' (Automated) .....	246
2.3.11 Network security .....	249
2.3.11.1 (L1) Ensure 'Network security: Allow Local System to use computer identity for NTLM' is set to 'Enabled' (Automated) .....	249
2.3.11.2 (L1) Ensure 'Network Security: Allow PKU2U authentication requests to this computer to use online identities' is set to 'Disabled' (Automated) .....	252
2.3.11.3 (L1) Ensure 'Network security: Do not store LAN Manager hash value on next password change' is set to 'Enabled' (Automated) .....	255
2.3.11.4 (L1) Ensure 'Network security: LAN Manager authentication level' is set to 'Send NTLMv2 response only. Refuse LM & NTLM' (Automated) .....	258
2.3.11.5 (L1) Ensure 'Network security: Minimum session security for NTLM SSP based (including secure RPC) clients' is set to 'Require NTLMv2 session security, Require 128-bit encryption' (Automated).....	262
2.3.12 Recovery console .....	265
2.3.13 Shutdown.....	265
2.3.14 System cryptography .....	265
2.3.15 System objects.....	265
2.3.16 System settings .....	265
2.3.17 User Account Control .....	266
2.3.17.1 (L1) Ensure 'User Account Control: Admin Approval Mode for the Built-in Administrator account' is set to 'Enabled' (Automated) .....	266
2.3.17.2 (L1) Ensure 'User Account Control: Behavior of the elevation prompt for administrators in Admin Approval Mode' is set to 'Prompt for consent on the secure desktop' (Automated).....	269
2.3.17.3 (L1) Ensure 'User Account Control: Behavior of the elevation prompt for standard users' is set to 'Automatically deny elevation requests' (Automated) .	273
2.3.17.4 (L1) Ensure 'User Account Control: Detect application installations and prompt for elevation' is set to 'Enabled' (Automated) .....	277
2.3.17.5 (L1) Ensure 'User Account Control: Only elevate UIAccess applications that are installed in secure locations' is set to 'Enabled' (Automated) .....	280
2.3.17.6 (L1) Ensure 'User Account Control: Run all administrators in Admin Approval Mode' is set to 'Enabled' (Automated) .....	283

2.3.17.7 (L1) Ensure 'User Account Control: Switch to the secure desktop when prompting for elevation' is set to 'Enabled' (Automated) .....	287
2.3.17.8 (L1) Ensure 'User Account Control: Virtualize file and registry write failures to per-user locations' is set to 'Enabled' (Automated) .....	290
3 Event Log.....	293
4 Restricted Groups .....	293
5 System Services.....	294
5.1 (L1) Ensure 'Xbox Accessory Management Service (XboxGipSvc)' is set to 'Disabled' (Automated) .....	294
5.2 (L1) Ensure 'Xbox Live Auth Manager (XblAuthManager)' is set to 'Disabled' (Automated) .....	297
5.3 (L1) Ensure 'Xbox Live Game Save (XblGameSave)' is set to 'Disabled' (Automated) .....	300
5.4 (L1) Ensure 'Xbox Live Networking Service (XboxNetApiSvc)' is set to 'Disabled' (Automated) .....	302
6 Registry .....	304
7 File System .....	304
8 Wired Network (IEEE 802.3) Policies.....	304
9 Windows Firewall with Advanced Security .....	305
9.1 Domain Profile.....	305
9.1.1 (L1) Ensure 'Windows Firewall: Domain: Firewall state' is set to 'Enabled' (Automated) .....	305
9.1.2 (L1) Ensure 'Windows Firewall: Domain: Inbound connections' is set to 'Block' (Automated) .....	307
9.1.3 (L1) Ensure 'Windows Firewall: Domain: Outbound connections' is set to 'Allow' (Automated) .....	310
9.1.4 (L1) Ensure 'Windows Firewall: Domain: Settings: Display a notification' is set to 'Block' (Automated) .....	313
9.2 Private Profile .....	316
9.2.1 (L1) Ensure 'Windows Firewall: Private: Firewall state' is set to 'Enabled' (Automated) .....	316
9.2.2 (L1) Ensure 'Windows Firewall: Private: Inbound connections' is set to 'Block' (Automated) .....	318

9.2.3 (L1) Ensure 'Windows Firewall: Private: Outbound connections' is set to 'Allow' (Automated) .....	321
9.2.4 (L1) Ensure 'Windows Firewall: Private: Settings: Display a notification' is set to 'Block' (Automated) .....	324
9.3 Public Profile .....	327
9.3.1 (L1) Ensure 'Windows Firewall: Public: Firewall state' is set to 'Enabled' (Automated) .....	327
9.3.2 (L1) Ensure 'Windows Firewall: Public: Inbound connections' is set to 'Block' (Automated) .....	330
9.3.3 (L1) Ensure 'Windows Firewall: Public: Outbound connections' is set to 'Allow' (Automated) .....	333
9.3.4 (L1) Ensure 'Windows Firewall: Public: Settings: Display a notification' is set to 'Block' (Automated) .....	336
10 Network List Manager Policies .....	338
11 Wireless Network (IEEE 802.11) Policies .....	338
12 Public Key Policies .....	338
13 Software Restriction Policies.....	338
14 Network Access Protection NAP Client Configuration.....	338
15 Application Control Policies.....	339
16 IP Security Policies .....	339
17 Advanced Audit Policy Configuration.....	340
17.1 Account Logon .....	340
17.1.1 (L1) Ensure 'Audit Credential Validation' is set to 'Success and Failure' (Automated) .....	340
17.2 Account Management .....	343
17.2.1 (L1) Ensure 'Audit Application Group Management' is set to 'Success and Failure' (Automated) .....	343
17.2.2 (L1) Ensure 'Audit Security Group Management' is set to include 'Success' (Automated) .....	346
17.2.3 (L1) Ensure 'Audit User Account Management' is set to 'Success and Failure' (Automated) .....	349
17.3 Detailed Tracking .....	352
17.3.1 (L1) Ensure 'Audit PNP Activity' is set to include 'Success' (Automated)	352

17.3.2 (L1) Ensure 'Audit Process Creation' is set to include 'Success' (Automated) .....	355
17.4 DS Access .....	358
17.5 Logon/Logoff .....	359
17.5.1 (L1) Ensure 'Audit Account Lockout' is set to include 'Failure' (Automated) .....	359
17.5.2 (L1) Ensure 'Audit Group Membership' is set to include 'Success' (Automated) .....	362
17.5.3 (L1) Ensure 'Audit Logoff' is set to include 'Success' (Automated) .....	365
17.5.4 (L1) Ensure 'Audit Logon' is set to 'Success and Failure' (Automated) ....	368
17.5.5 (L1) Ensure 'Audit Other Logon/Logoff Events' is set to 'Success and Failure' (Automated) .....	371
17.5.6 (L1) Ensure 'Audit Special Logon' is set to include 'Success' (Automated) .....	374
17.6 Object Access .....	377
17.6.1 (L1) Ensure 'Audit Detailed File Share' is set to include 'Failure' (Automated) .....	377
17.6.2 (L1) Ensure 'Audit File Share' is set to 'Success and Failure' (Automated) .....	381
17.6.3 (L1) Ensure 'Audit Other Object Access Events' is set to 'Success and Failure' (Automated) .....	385
17.6.4 (L1) Ensure 'Audit Removable Storage' is set to 'Success and Failure' (Automated) .....	388
17.7 Policy Change .....	391
17.7.1 (L1) Ensure 'Audit Audit Policy Change' is set to include 'Success' (Automated) .....	391
17.7.2 (L1) Ensure 'Audit Authentication Policy Change' is set to include 'Success' (Automated) .....	394
17.7.3 (L1) Ensure 'Audit Authorization Policy Change' is set to include 'Success' (Automated) .....	397
17.7.4 (L1) Ensure 'Audit MPSSVC Rule-Level Policy Change' is set to 'Success and Failure' (Automated) .....	400
17.7.5 (L1) Ensure 'Audit Other Policy Change Events' is set to include 'Failure' (Automated) .....	403

17.8 Privilege Use .....	406
17.8.1 (L1) Ensure 'Audit Sensitive Privilege Use' is set to 'Success and Failure' (Automated) .....	406
17.9 System.....	409
17.9.1 (L1) Ensure 'Audit IPsec Driver' is set to 'Success and Failure' (Automated) .....	409
17.9.2 (L1) Ensure 'Audit Other System Events' is set to 'Success and Failure' (Automated) .....	413
17.9.3 (L1) Ensure 'Audit Security State Change' is set to include 'Success' (Automated) .....	416
17.9.4 (L1) Ensure 'Audit Security System Extension' is set to include 'Success' (Automated) .....	419
17.9.5 (L1) Ensure 'Audit System Integrity' is set to 'Success and Failure' (Automated) .....	422
18 Administrative Templates (Computer) .....	425
18.1 Control Panel .....	425
18.1.1 Personalization .....	425
18.1.1.1 (L1) Ensure 'Prevent enabling lock screen camera' is set to 'Enabled' (Automated) .....	425
18.1.1.2 (L1) Ensure 'Prevent enabling lock screen slide show' is set to 'Enabled' (Automated) .....	428
18.1.2 Regional and Language Options .....	431
18.1.2.2 (L1) Ensure 'Allow users to enable online speech recognition services' is set to 'Disabled' (Automated) .....	432
18.1.3 (L2) Ensure 'Allow Online Tips' is set to 'Disabled' (Automated) .....	435
18.2 LAPS .....	437
18.3 MS Security Guide.....	438
18.3.1 (L1) Ensure 'Apply UAC restrictions to local accounts on network logons' is set to 'Enabled' (Automated) .....	438
18.3.2 (L1) Ensure 'Configure SMB v1 client driver' is set to 'Enabled: Disable driver (recommended)' (Automated) .....	441
18.3.3 (L1) Ensure 'Configure SMB v1 server' is set to 'Disabled' (Automated)..	445

18.3.4 (L1) Ensure 'Enable Structured Exception Handling Overwrite Protection (SEHOP)' is set to 'Enabled' (Automated) .....	448
18.3.5 (L1) Ensure 'WDigest Authentication' is set to 'Disabled' (Automated) ...	451
18.4 MSS (Legacy).....	454
18.4.1 (L1) Ensure 'MSS: (DisableIPSourceRouting IPv6) IP source routing protection level (protects against packet spoofing)' is set to 'Enabled: Highest protection, source routing is completely disabled' (Automated) .....	454
18.4.2 (L1) Ensure 'MSS: (DisableIPSourceRouting) IP source routing protection level (protects against packet spoofing)' is set to 'Enabled: Highest protection, source routing is completely disabled' (Automated) .....	457
18.4.3 (L1) Ensure 'MSS: (EnableICMPRedirect) Allow ICMP redirects to override OSPF generated routes' is set to 'Disabled' (Automated).....	460
18.4.4 (L1) Ensure 'MSS: (NoNameReleaseOnDemand) Allow the computer to ignore NetBIOS name release requests except from WINS servers' is set to 'Enabled' (Automated) .....	463
18.5 Network .....	466
18.5.1 Background Intelligent Transfer Service (BITS) .....	466
18.5.2 BranchCache .....	466
18.5.3 DirectAccess Client Experience Settings .....	466
18.5.4 DNS Client.....	466
18.5.5 Fonts .....	467
18.5.5.1 (L2) Ensure 'Enable Font Providers' is set to 'Disabled' (Automated) ...	467
18.5.6 Hotspot Authentication .....	470
18.5.7 Lanman Server .....	470
18.5.8 Lanman Workstation .....	471
18.5.8.1 (L1) Ensure 'Enable insecure guest logons' is set to 'Disabled' (Automated) .....	471
18.5.9 Link-Layer Topology Discovery.....	474
18.5.10 Microsoft Peer-to-Peer Networking Services.....	474
18.5.11 Network Connections .....	475
18.5.11.2 (L1) Ensure 'Prohibit installation and configuration of Network Bridge on your DNS domain network' is set to 'Enabled' (Automated) .....	475

18.5.11.3 (L1) Ensure 'Prohibit use of Internet Connection Sharing on your DNS domain network' is set to 'Enabled' (Automated) .....	478
18.5.12 Network Connectivity Status Indicator .....	480
18.5.13 Network Isolation .....	480
18.5.14 Network Provider .....	481
18.5.14.1 (L1) Ensure 'Hardened UNC Paths' is set to 'Enabled, with "Require Mutual Authentication" and "Require Integrity" set for all NETLOGON and SYSVOL shares' (Automated) .....	481
18.5.15 Offline Files .....	485
18.5.16 QoS Packet Scheduler.....	485
18.5.17 SNMP .....	485
18.5.18 SSL Configuration Settings .....	485
18.5.19 TCPIP Settings .....	486
18.5.20 Windows Connect Now .....	486
18.5.21 Windows Connection Manager .....	487
18.5.21.1 (L1) Ensure 'Prohibit connection to non-domain networks when connected to domain authenticated network' is set to 'Enabled' (Automated) ...	487
18.5.22 Wireless Display .....	490
18.5.23 WLAN Service .....	490
18.5.23.2.1 (L1) Ensure 'Allow Windows to automatically connect to suggested open hotspots, to networks shared by contacts, and to hotspots offering paid services' is set to 'Disabled' (Automated) .....	491
18.6 Printers.....	494
18.7 Start Menu and Taskbar .....	495
18.7.1 Notifications .....	495
18.7.1.1 (L2) Ensure 'Turn off notifications network usage' is set to 'Enabled' (Automated) .....	495
18.8 System.....	498
18.8.1 Access-Denied Assistance.....	498
18.8.2 App-V .....	498
18.8.3 Audit Process Creation.....	498
18.8.4 Credentials Delegation .....	499

18.8.4.1 (L1) Ensure 'Remote host allows delegation of non-exportable credentials' is set to 'Enabled' (Automated) .....	499
<b>18.8.5 Device Guard .....</b>	<b>502</b>
18.8.5.1 (NG) Ensure 'Turn On Virtualization Based Security' is set to 'Enabled' (Automated) .....	502
18.8.5.2 (NG) Ensure 'Turn On Virtualization Based Security: Select Platform Security Level' is set to 'Secure Boot and DMA Protection' (Automated) .....	505
18.8.5.3 (NG) Ensure 'Turn On Virtualization Based Security: Credential Guard Configuration' is set to 'Enabled with UEFI lock' (Automated) .....	508
18.8.5.4 (NG) Ensure 'Turn On Virtualization Based Security: Secure Launch Configuration' is set to 'Enabled' (Automated) .....	511
<b>18.8.6 Device Health Attestation Service .....</b>	<b>514</b>
<b>18.8.7 Device Installation.....</b>	<b>515</b>
18.8.7.1.1 (BL) Ensure 'Prevent installation of devices that match any of these device IDs' is set to 'Enabled' (Automated) .....	515
18.8.7.1.2 (BL) Ensure 'Prevent installation of devices that match any of these device IDs: Prevent installation of devices that match any of these device IDs' is set to 'PCI\CC_0C0A' (Automated) .....	519
18.8.7.1.3 (BL) Ensure 'Prevent installation of devices that match any of these device IDs: Also apply to matching devices that are already installed.' is set to 'True' (checked) (Automated) .....	523
18.8.7.1.4 (BL) Ensure 'Prevent installation of devices using drivers that match these device setup classes' is set to 'Enabled' (Automated) .....	528
18.8.7.1.5 (BL) Ensure 'Prevent installation of devices using drivers that match these device setup classes: Also apply to matching devices that are already installed.' is set to 'True' (checked) (Automated) .....	531
<b>18.8.8 Device Redirection .....</b>	<b>534</b>
<b>18.8.9 Disk NV Cache .....</b>	<b>534</b>
<b>18.8.10 Disk Quotas .....</b>	<b>534</b>
<b>18.8.11 Display .....</b>	<b>534</b>
<b>18.8.12 Distributed COM .....</b>	<b>535</b>
<b>18.8.13 Driver Installation .....</b>	<b>535</b>
<b>18.8.14 Early Launch Antimalware.....</b>	<b>536</b>

18.8.14.1 (L1) Ensure 'Boot-Start Driver Initialization Policy' is set to 'Enabled: Good, unknown and bad but critical' (Automated) .....	536
18.8.15 Enhanced Storage Access .....	539
18.8.16 File Classification Infrastructure .....	539
18.8.17 File Share Shadow Copy Agent .....	539
18.8.18 File Share Shadow Copy Provider .....	539
18.8.19 Filesystem (formerly NTFS Filesystem) .....	540
18.8.20 Folder Redirection.....	540
18.8.21 Group Policy .....	540
18.8.22 Internet Communication Management .....	541
18.8.22.1.1 (L1) Ensure 'Turn off downloading of print drivers over HTTP' is set to 'Enabled' (Automated) .....	541
18.8.22.1.2 (L1) Ensure 'Turn off Internet download for Web publishing and online ordering wizards' is set to 'Enabled' (Automated) .....	544
18.8.22.1.3 (L2) Ensure 'Turn off printing over HTTP' is set to 'Enabled' (Automated) .....	547
18.8.22.1.4 (L2) Ensure 'Turn off Windows Error Reporting' is set to 'Enabled' (Automated) .....	550
18.8.23 iSCSI .....	553
18.8.24 KDC .....	553
18.8.25 Kerberos .....	553
18.8.26 Kernel DMA Protection .....	554
18.8.26.1 (BL) Ensure 'Enumeration policy for external devices incompatible with Kernel DMA Protection' is set to 'Enabled: Block All' (Automated) .....	554
18.8.27 Locale Services .....	557
18.8.28 Logon .....	558
18.8.28.1 (L1) Ensure 'Do not display network selection UI' is set to 'Enabled' (Automated) .....	558
18.8.28.2 (L1) Ensure 'Enumerate local users on domain-joined computers' is set to 'Disabled' (Automated) .....	561
18.8.28.3 (L1) Ensure 'Turn off app notifications on the lock screen' is set to 'Enabled' (Automated) .....	564

18.8.28.4 (L1) Ensure 'Turn off picture password sign-in' is set to 'Enabled' (Automated) .....	567
18.8.28.5 (L1) Ensure 'Turn on convenience PIN sign-in' is set to 'Disabled' (Automated) .....	570
18.8.29 Mitigation Options .....	573
18.8.30 Net Logon.....	573
18.8.31 OS Policies .....	574
18.8.31.1 (L2) Ensure 'Allow Clipboard synchronization across devices' is set to 'Disabled' (Automated) .....	574
18.8.31.2 (L2) Ensure 'Allow upload of User Activities' is set to 'Disabled' (Automated) .....	577
18.8.32 Performance Control Panel .....	580
18.8.33 PIN Complexity .....	580
18.8.34 Power Management .....	580
18.8.34.6.1 (BL) Ensure 'Allow standby states (S1-S3) when sleeping (on battery)' is set to 'Disabled' (Automated) .....	582
18.8.34.6.2 (BL) Ensure 'Allow standby states (S1-S3) when sleeping (plugged in)' is set to 'Disabled' (Automated) .....	585
18.8.34.6.3 (L1) Ensure 'Require a password when a computer wakes (on battery)' is set to 'Enabled' (Automated) .....	588
18.8.34.6.4 (L1) Ensure 'Require a password when a computer wakes (plugged in)' is set to 'Enabled' (Automated) .....	591
18.8.35 Recovery.....	594
18.8.36 Remote Assistance.....	595
18.8.36.1 (L1) Ensure 'Configure Offer Remote Assistance' is set to 'Disabled' (Automated) .....	595
18.8.36.2 (L1) Ensure 'Configure Solicited Remote Assistance' is set to 'Disabled' (Automated) .....	598
18.8.37 Remote Procedure Call.....	601
18.8.37.1 (L1) Ensure 'Enable RPC Endpoint Mapper Client Authentication' is set to 'Enabled' (Automated) .....	601
18.8.37.2 (L1) Ensure 'Restrict Unauthenticated RPC clients' is set to 'Enabled: Authenticated' (Automated) .....	604

18.8.38 Removable Storage Access .....	607
18.8.39 Scripts .....	607
18.8.40 Server Manager.....	607
18.8.41 Service Control Manager Settings .....	607
18.8.42 Shutdown .....	608
18.8.43 Shutdown Options .....	608
18.8.44 Storage Health .....	608
18.8.45 Storage Sense .....	608
18.8.46 System Restore.....	609
18.8.47 Troubleshooting and Diagnostics .....	609
18.8.48 Trusted Platform Module Services .....	609
18.8.49 User Profiles .....	610
18.8.49.1 (L2) Ensure 'Turn off the advertising ID' is set to 'Enabled' (Automated) .....	610
18.8.50 Windows File Protection .....	613
18.8.51 Windows HotStart .....	613
18.8.52 Windows Time Service.....	613
18.9 Windows Components .....	614
18.9.1 Active Directory Federation Services .....	614
18.9.2 ActiveX Installer Service.....	614
18.9.3 Add features to Windows 8 / 8.1 / 10 (formerly Windows Anytime Upgrade) .....	614
18.9.4 App Package Deployment .....	615
18.9.4.1 (L2) Ensure 'Allow a Windows app to share application data between users' is set to 'Disabled' (Automated) .....	615
18.9.5 App Privacy.....	618
18.9.5.1 (L1) Ensure 'Let Windows apps activate with voice while the system is locked' is set to 'Disabled' (Automated) .....	618
18.9.6 App runtime .....	621
18.9.6.1 (L1) Ensure 'Allow Microsoft accounts to be optional' is set to 'Enabled' (Automated) .....	621
18.9.7 Application Compatibility .....	624

18.9.8 AutoPlay Policies.....	625
18.9.8.1 (L1) Ensure 'Disallow Autoplay for non-volume devices' is set to 'Enabled' (Automated) .....	625
18.9.8.2 (L1) Ensure 'Set the default behavior for AutoRun' is set to 'Enabled: Do not execute any autorun commands' (Automated) .....	628
18.9.8.3 (L1) Ensure 'Turn off Autoplay' is set to 'Enabled: All drives' (Automated) .....	631
18.9.9 Backup.....	634
18.9.10 Biometrics .....	634
18.9.11 BitLocker Drive Encryption .....	635
18.9.11.1.1 (BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered' is set to 'Enabled' (Automated) .....	635
18.9.11.1.2 (BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Allow data recovery agent' is set to 'Enabled: True' (Automated) ....	639
18.9.11.1.3 (BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Recovery Password' is set to 'Enabled: Allow 48-digit recovery password' (Automated) .....	642
18.9.11.1.4 (BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Omit recovery options from the BitLocker setup wizard' is set to 'Enabled: True' (Automated).....	645
18.9.11.1.5 (BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Save BitLocker recovery information to AD DS for fixed data drives' is set to 'Enabled: False' (Automated) .....	648
18.9.11.1.6 (BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Configure storage of BitLocker recovery information to AD DS' is set to 'Enabled: Backup recovery passwords and key packages' (Automated) .....	651
18.9.11.1.7 (BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Do not enable BitLocker until recovery information is stored to AD DS for fixed data drives' is set to 'Enabled: False' (Automated) .....	654
18.9.11.2.1 (BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered' is set to 'Enabled' (Automated) .....	657
18.9.11.2.2 (BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Allow data recovery agent' is set to 'Enabled: False' (Automated) .....	662

18.9.11.2.3 (BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Recovery Password' is set to 'Enabled: Require 48-digit recovery password' (Automated) .....	665
18.9.11.2.4 (BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Recovery Key' is set to 'Enabled: Do not allow 256-bit recovery key' (Automated) .....	668
18.9.11.2.5 (BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Omit recovery options from the BitLocker setup wizard' is set to 'Enabled: True' (Automated) .....	671
18.9.11.2.6 (BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Save BitLocker recovery information to AD DS for operating system drives' is set to 'Enabled: True' (Automated) .....	674
18.9.11.2.7 (BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Configure storage of BitLocker recovery information to AD DS.' is set to 'Enabled: Store recovery passwords and key packages' (Automated) .....	677
18.9.11.2.8 (BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Do not enable BitLocker until recovery information is stored to AD DS for operating system drives' is set to 'Enabled: True' (Automated) .....	680
18.9.11.2.9 (BL) Ensure 'Require additional authentication at startup' is set to 'Enabled' (Automated) .....	684
18.9.11.2.10 (BL) Ensure 'Require additional authentication at startup: Allow BitLocker without a compatible TPM' is set to 'Enabled: False' (Automated) .....	687
18.9.11.3.1 (BL) Ensure 'Deny write access to removable drives not protected by BitLocker' is set to 'Enabled' (Automated) .....	691
18.9.11.3.2 (BL) Ensure 'Deny write access to removable drives not protected by BitLocker: Do not allow write access to devices configured in another organization' is set to 'Enabled: False' (Automated) .....	695
18.9.12 Camera .....	699
18.9.12.1 (L2) Ensure 'Allow Use of Camera' is set to 'Disabled' (Automated) ....	699
18.9.13 Cloud Content .....	702
18.9.13.1 (L1) Ensure 'Turn off Microsoft consumer experiences' is set to 'Enabled' (Automated) .....	702
18.9.14 Connect .....	705

18.9.14.1 (L1) Ensure 'Require pin for pairing' is set to 'Enabled: First Time' OR 'Enabled: Always' (Automated) .....	705
18.9.15 Credential User Interface .....	708
18.9.15.1 (L1) Ensure 'Do not display the password reveal button' is set to 'Enabled' (Automated) .....	708
18.9.15.2 (L1) Ensure 'Enumerate administrator accounts on elevation' is set to 'Disabled' (Automated) .....	711
18.9.16 Data Collection and Preview Builds .....	714
18.9.16.1 (L1) Ensure 'Allow Telemetry' is set to 'Enabled: 0 - Security [Enterprise Only]' or 'Enabled: 1 - Basic' (Automated) .....	714
18.9.16.2 (L2) Ensure 'Configure Authenticated Proxy usage for the Connected User Experience and Telemetry service' is set to 'Enabled: Disable Authenticated Proxy usage' (Automated) .....	717
18.9.16.3 (L1) Ensure 'Do not show feedback notifications' is set to 'Enabled' (Automated) .....	720
18.9.16.4 (L1) Ensure 'Toggle user control over Insider builds' is set to 'Disabled' (Manual) .....	722
18.9.17 Delivery Optimization.....	725
18.9.17.1 (L1) Ensure 'Download Mode' is NOT set to 'Enabled: Internet' (Automated) .....	725
18.9.18 Desktop Gadgets .....	728
18.9.19 Desktop Window Manager .....	728
18.9.20 Device and Driver Compatibility .....	728
18.9.21 Device Registration (formerly Workplace Join).....	728
18.9.22 Digital Locker .....	729
18.9.23 Edge UI .....	729
18.9.24 EMET .....	729
18.9.25 Event Forwarding .....	730
18.9.26 Event Log Service.....	731
18.9.26.1.1 (L1) Ensure 'Application: Control Event Log behavior when the log file reaches its maximum size' is set to 'Disabled' (Automated).....	731
18.9.26.1.2 (L1) Ensure 'Application: Specify the maximum log file size (KB)' is set to 'Enabled: 32,768 or greater' (Automated) .....	734

18.9.26.2.1 (L1) Ensure 'Security: Specify the maximum log file size (KB)' is set to 'Enabled: 196,608 or greater' (Automated) .....	737
18.9.26.4.1 (L1) Ensure 'System: Specify the maximum log file size (KB)' is set to 'Enabled: 32,768 or greater' (Automated) .....	741
18.9.27 Event Logging .....	744
18.9.28 Event Viewer .....	744
18.9.29 Family Safety (formerly Parental Controls) .....	744
18.9.30 File Explorer (formerly Windows Explorer) .....	745
18.9.30.2 (L1) Ensure 'Turn off Data Execution Prevention for Explorer' is set to 'Disabled' (Automated) .....	745
18.9.30.3 (L1) Ensure 'Turn off heap termination on corruption' is set to 'Disabled' (Automated) .....	748
18.9.31 File History .....	751
18.9.32 Find My Device .....	751
18.9.33 Game Explorer .....	751
18.9.34 Handwriting .....	751
18.9.35 HomeGroup .....	752
18.9.36 Import Video .....	752
18.9.37 Internet Explorer .....	752
18.9.38 Internet Information Services .....	752
18.9.39 Location and Sensors .....	753
18.9.39.1 (L2) Ensure 'Turn off location' is set to 'Enabled' (Automated) .....	753
18.9.40 Maintenance Scheduler .....	756
18.9.41 Maps .....	756
18.9.42 MDM .....	756
18.9.43 Messaging .....	757
18.9.43.1 (L2) Ensure 'Allow Message Service Cloud Sync' is set to 'Disabled' (Automated) .....	757
18.9.44 Microsoft account .....	760
18.9.45 Microsoft Defender Antivirus (formerly Windows Defender and Windows Defender Antivirus) .....	760

18.9.45.4.1.1 (L1) Ensure 'Configure Attack Surface Reduction rules' is set to 'Enabled' (Manual) .....	762
18.9.45.4.1.2 (L1) Ensure 'Configure Attack Surface Reduction rules: Set the state for each ASR rule' is 'configured' (Automated) .....	764
18.9.45.4.3.1 (L1) Ensure 'Prevent users and apps from accessing dangerous websites' is set to 'Enabled: Block' (Automated) .....	769
18.9.45.8.1 (L1) Ensure 'Turn on behavior monitoring' is set to 'Enabled' (Automated) .....	773
18.9.45.11.1 (L1) Ensure 'Scan removable drives' is set to 'Enabled' (Automated) .....	777
18.9.45.11.2 (L1) Ensure 'Turn on e-mail scanning' is set to 'Enabled' (Automated) .....	780
18.9.45.14 (L1) Ensure 'Configure detection for potentially unwanted applications' is set to 'Enabled: Block' (Automated) .....	784
18.9.45.15 (L1) Ensure 'Turn off Microsoft Defender AntiVirus' is set to 'Disabled' (Automated) .....	787
18.9.46 Microsoft Defender Application Guard (formerly Windows Defender Application Guard) .....	790
18.9.47 Microsoft Defender Exploit Guard (formerly Windows Defender Exploit Guard) .....	790
18.9.48 Microsoft Edge .....	791
18.9.48.1 (L1) Ensure 'Prevent bypassing Windows Defender SmartScreen prompts for files' is set to 'Enabled' (Automated) .....	791
18.9.49 Microsoft FIDO Authentication .....	794
18.9.50 Microsoft Secondary Authentication Factor .....	794
18.9.51 Microsoft User Experience Virtualization .....	794
18.9.52 NetMeeting .....	794
18.9.53 Network Access Protection .....	795
18.9.54 Network Projector .....	795
18.9.55 OneDrive (formerly SkyDrive) .....	796
18.9.55.1 (L1) Ensure 'Prevent the usage of OneDrive for file storage' is set to 'Enabled' (Automated) .....	796
18.9.56 Online Assistance .....	800

18.9.57 OOBE .....	800
18.9.58 Password Synchronization.....	800
18.9.59 Portable Operating System .....	800
18.9.60 Presentation Settings .....	801
18.9.61 Push To Install .....	802
18.9.62 Remote Desktop Services (formerly Terminal Services) .....	802
18.9.62.2.2 (L1) Ensure 'Do not allow passwords to be saved' is set to 'Enabled' (Automated) .....	804
18.9.62.3.2.1 (L2) Ensure 'Allow users to connect remotely by using Remote Desktop Services' is set to 'Disabled' (Automated) .....	808
18.9.62.3.3.1 (L1) Ensure 'Do not allow drive redirection' is set to 'Enabled' (Automated) .....	812
18.9.62.3.9.1 (L1) Ensure 'Always prompt for password upon connection' is set to 'Enabled' (Automated) .....	817
18.9.62.3.9.2 (L1) Ensure 'Require secure RPC communication' is set to 'Enabled' (Automated) .....	820
18.9.62.3.9.3 (L1) Ensure 'Set client connection encryption level' is set to 'Enabled: High Level' (Automated) .....	823
18.9.63 RSS Feeds .....	827
18.9.63.1 (L1) Ensure 'Prevent downloading of enclosures' is set to 'Enabled' (Automated) .....	827
18.9.64 Search .....	830
18.9.64.2 (L2) Ensure 'Allow Cloud Search' is set to 'Enabled: Disable Cloud Search' (Automated) .....	831
18.9.64.3 (L1) Ensure 'Allow Cortana' is set to 'Disabled' (Automated) .....	833
18.9.64.4 (L1) Ensure 'Allow Cortana above lock screen' is set to 'Blocked' (Automated) .....	836
18.9.64.5 (L1) Ensure 'Allow indexing of encrypted files' is set to 'Disabled' (Automated) .....	838
18.9.64.6 (L1) Ensure 'Allow search and Cortana to use location' is set to 'Disabled' (Automated) .....	841
18.9.65 Security Center.....	844
18.9.66 Server for NIS.....	844

18.9.67 Shutdown Options .....	844
18.9.68 Smart Card.....	844
18.9.69 Software Protection Platform .....	845
18.9.69.1 (L2) Ensure 'Turn off KMS Client Online AVS Validation' is set to 'Enabled' (Automated) .....	845
18.9.70 Sound Recorder .....	848
18.9.71 Speech.....	848
18.9.72 Store .....	849
18.9.72.1 (L2) Ensure 'Disable all apps from Microsoft Store' is set to 'Disabled' (Automated) .....	849
18.9.72.2 (L1) Ensure 'Only display the private store within the Microsoft Store' is set to 'Enabled' (Automated) .....	852
18.9.72.3 (L1) Ensure 'Turn off Automatic Download and Install of updates' is set to 'Disabled' (Automated).....	855
18.9.73 Sync your settings.....	858
18.9.74 Tablet PC .....	858
18.9.75 Task Scheduler .....	858
18.9.76 Text Input .....	858
18.9.77 Windows Calendar .....	858
18.9.78 Windows Color System .....	859
18.9.79 Windows Customer Experience Improvement Program .....	859
18.9.80 Windows Defender SmartScreen .....	860
18.9.80.1.1 (L1) Ensure 'Configure Windows Defender SmartScreen' is set to 'Enabled: Warn and prevent bypass' (Automated) .....	860
18.9.80.2.1 (L1) Ensure 'Configure Windows Defender SmartScreen' is set to 'Enabled' (Automated) .....	863
18.9.80.2.2 (L1) Ensure 'Prevent bypassing Windows Defender SmartScreen prompts for sites' is set to 'Enabled' (Automated) .....	866
18.9.81 Windows Error Reporting .....	869
18.9.82 Windows Game Recording and Broadcasting.....	870
18.9.82.1 (L1) Ensure 'Enables or disables Windows Game Recording and Broadcasting' is set to 'Disabled' (Automated) .....	870

18.9.83 Windows Hello for Business (formerly Microsoft Passport for Work) .....	873
18.9.84 Windows Ink Workspace .....	874
18.9.84.1 (L2) Ensure 'Allow suggested apps in Windows Ink Workspace' is set to 'Disabled' (Automated) .....	874
18.9.84.2 (L1) Ensure 'Allow Windows Ink Workspace' is set to 'Enabled: On, but disallow access above lock' OR 'Disabled' but not 'Enabled: On' (Automated) ....	877
18.9.85 Windows Installer .....	880
18.9.85.1 (L1) Ensure 'Allow user control over installs' is set to 'Disabled' (Automated) .....	880
18.9.85.2 (L1) Ensure 'Always install with elevated privileges' is set to 'Disabled' (Automated) .....	883
18.9.86 Windows Logon Options .....	887
18.9.86.1 (L1) Ensure 'Sign-in and lock last interactive user automatically after a restart' is set to 'Disabled' (Automated) .....	887
18.9.87 Windows Mail .....	890
18.9.88 Windows Media Center .....	890
18.9.89 Windows Media Digital Rights Management.....	890
18.9.90 Windows Media Player .....	890
18.9.91 Windows Meeting Space.....	891
18.9.92 Windows Messenger .....	891
18.9.93 Windows Mobility Center .....	891
18.9.94 Windows Movie Maker .....	891
18.9.95 Windows PowerShell .....	892
18.9.95.1 (L1) Ensure 'Turn on PowerShell Script Block Logging' is set to 'Disabled' (Automated) .....	892
18.9.96 Windows Reliability Analysis.....	895
18.9.97 Windows Remote Management (WinRM) .....	896
18.9.97.1.1 (L1) Ensure 'Allow Basic authentication' is set to 'Disabled' (Automated) .....	896
18.9.97.1.2 (L1) Ensure 'Allow unencrypted traffic' is set to 'Disabled' (Automated) .....	899
18.9.97.1.3 (L1) Ensure 'Disallow Digest authentication' is set to 'Enabled' (Automated) .....	902

18.9.97.2.1 (L1) Ensure 'Allow Basic authentication' is set to 'Disabled' (Automated) .....	905
18.9.97.2.2 (L2) Ensure 'Allow remote server management through WinRM' is set to 'Disabled' (Automated) .....	908
18.9.97.2.3 (L1) Ensure 'Allow unencrypted traffic' is set to 'Disabled' (Automated) .....	911
18.9.97.2.4 (L1) Ensure 'Disallow WinRM from storing RunAs credentials' is set to 'Enabled' (Automated) .....	914
18.9.98 Windows Remote Shell .....	917
18.9.98.1 (L2) Ensure 'Allow Remote Shell Access' is set to 'Disabled' (Automated) .....	917
18.9.99 Windows Security (formerly Windows Defender Security Center) .....	920
18.9.99.2.1 (L1) Ensure 'Prevent users from modifying settings' is set to 'Enabled' (Automated) .....	921
18.9.100 Windows SideShow .....	924
18.9.101 Windows System Resource Manager .....	924
18.9.102 Windows Update .....	925
18.9.102.1.1 (L1) Ensure 'Manage preview builds' is set to 'Enabled: Disable preview builds' (Automated) .....	925
18.9.102.1.2 (L1) Ensure 'Select when Quality Updates are received' is set to 'Enabled: 0 days' (Automated) .....	928
18.9.102.2 (L1) Ensure 'Configure Automatic Updates' is set to 'Enabled' (Automated) .....	931
18.9.102.3 (L1) Ensure 'Configure Automatic Updates: Scheduled install day' is set to '0 - Every day' (Automated) .....	934
18.9.102.4 (L1) Ensure 'Remove access to "Pause updates" feature' is set to 'Enabled' (Automated) .....	937
19 Administrative Templates (User) .....	939
19.1 Control Panel .....	939
19.1.1 Add or Remove Programs .....	939
19.1.2 Display .....	939
19.1.3 Personalization (formerly Desktop Themes) .....	939
19.2 Desktop .....	940

19.3 Network .....	940
19.4 Shared Folders .....	940
19.5 Start Menu and Taskbar .....	941
19.5.1 Notifications .....	941
19.5.1.1 (L1) Ensure 'Turn off toast notifications on the lock screen' is set to 'Blocked' (Automated).....	941
19.6 System.....	944
19.6.1 Ctrl+Alt+Del Options .....	944
19.6.2 Display .....	944
19.6.3 Driver Installation .....	944
19.6.4 Folder Redirection .....	944
19.6.5 Group Policy.....	945
19.6.6 Internet Communication Management.....	945
19.7 Windows Components .....	945
19.7.1 Add features to Windows 8 / 8.1 / 10 (formerly Windows Anytime Upgrade) .....	945
19.7.2 App runtime .....	946
19.7.3 Application Compatibility .....	946
19.7.4 Attachment Manager.....	947
19.7.4.1 (L1) Ensure 'Do not preserve zone information in file attachments' is set to 'Disabled' (Automated).....	947
19.7.4.2 (L1) Ensure 'Notify antivirus programs when opening attachments' is set to 'Enabled' (Automated) .....	950
19.7.5 AutoPlay Policies.....	953
19.7.6 Backup.....	953
19.7.7 Calculator.....	953
19.7.8 Cloud Content .....	954
19.7.8.1 (L1) Ensure 'Configure Windows spotlight on lock screen' is set to 'Disabled' (Automated) .....	954
19.7.8.2 (L1) Ensure 'Do not suggest third-party content in Windows spotlight' is set to 'Enabled' (Automated) .....	957
19.7.9 Credential User Interface .....	960

19.7.10 Data Collection and Preview Builds .....	960
19.7.11 Desktop Gadgets .....	960
19.7.12 Desktop Window Manager .....	960
19.7.13 Digital Locker .....	961
19.7.14 Edge UI .....	961
19.7.15 File Explorer (formerly Windows Explorer) .....	961
19.7.16 File Revocation.....	961
19.7.17 IME .....	962
19.7.18 Import Video .....	962
19.7.19 Instant Search .....	962
19.7.20 Internet Explorer .....	962
19.7.21 Location and Sensors .....	962
19.7.22 Microsoft Edge.....	963
19.7.23 Microsoft Management Console .....	963
19.7.24 Microsoft User Experience Virtualization .....	963
19.7.25 NetMeeting.....	963
19.7.26 Network Projector.....	963
19.7.27 Network Sharing .....	964
19.7.28 OOBE .....	964
19.7.29 Presentation Settings .....	964
19.7.30 Remote Desktop Services (formerly Terminal Services) .....	964

# Overview

This document provides prescriptive guidance for establishing a secure configuration posture for Microsoft Intune for Windows 10 Benchmark. This guide was tested against Microsoft Windows 10 Release 2004 Enterprise edition. Please note that Intune is continually updating to support settings that are backed by group policy. This benchmark is based off of settings that were available natively within Intune at the time of publication. To obtain the latest version of this guide, please visit <https://www.cisecurity.org/cis-benchmarks/>. If you have questions, comments, or have identified ways to improve this guide, please write us at [feedback@cisecurity.org](mailto:feedback@cisecurity.org).

## Intended Audience

The Windows CIS Benchmarks are written for Intune-joined systems using Configuration Profile, not standalone/workgroup systems. Adjustments/tailoring to some recommendations will be needed to maintain functionality if attempting to implement CIS hardening on standalone systems or a system running in the cloud.

## Consensus Guidance

This benchmark was created using a consensus review process comprised of subject matter experts. Consensus participants provide perspective from a diverse set of backgrounds including consulting, software development, audit and compliance, security research, operations, government, and legal.

Each CIS benchmark undergoes two phases of consensus review. The first phase occurs during initial benchmark development. During this phase, subject matter experts convene to discuss, create, and test working drafts of the benchmark. This discussion occurs until consensus has been reached on benchmark recommendations. The second phase begins after the benchmark has been published. During this phase, all feedback provided by the Internet community is reviewed by the consensus team for incorporation in the benchmark. If you are interested in participating in the consensus process, please visit <https://workbench.cisecurity.org/>.

# Typographical Conventions

The following typographical conventions are used throughout this guide:

Convention	Meaning
<code>Stylized Monospace font</code>	Used for blocks of code, command, and script examples. Text should be interpreted exactly as presented.
<code>Monospace font</code>	Used for inline code, commands, or examples. Text should be interpreted exactly as presented.
<i>&lt;italic font in brackets&gt;</i>	Italic texts set in angle brackets denote a variable requiring substitution for a real value.
<i>Italic font</i>	Used to denote the title of a book, article, or other publication.
<b>Note</b>	Additional information or caveats

## Assessment Status

An assessment status is included for every recommendation. The assessment status indicates whether the given recommendation can be automated or requires manual steps to implement. Both statuses are equally important and are determined and supported as defined below:

### Automated

Represents recommendations for which assessment of a technical control can be fully automated and validated to a pass/fail state. Recommendations will include the necessary information to implement automation.

### Manual

Represents recommendations for which assessment of a technical control cannot be fully automated and requires all or some manual steps to validate that the configured state is set as expected. The expected state can vary depending on the environment.

# Profile Definitions

The following configuration profiles are defined by this Benchmark:

- **Level 1 (L1) - Corporate/Enterprise Environment (general use)**

Items in this profile intend to:

- be the starting baseline for most organizations;
- be practical and prudent;
- provide a clear security benefit; and
- not inhibit the utility of the technology beyond acceptable means.

- **Level 1 (L1) + BitLocker (BL)**

This profile extends the "Level 1 (L1)" profile and includes BitLocker-related recommendations.

- **Level 1 (L1) + Next Generation Windows Security (NG)**

This profile extends the "Level 1 (L1)" profile and includes Next Generation Windows Security-related recommendations.

- **Level 1 (L1) + BitLocker (BL) + Next Generation Windows Security (NG)**

This profile extends the "Level 1 (L1)" profile and includes BitLocker and Next Generation Windows Security-related recommendations.

- **Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)**

This profile extends the "Level 1 (L1)" profile. Items in this profile exhibit one or more of the following characteristics:

- are intended for environments or use cases where security is more critical than manageability and usability;
- may negatively inhibit the utility or performance of the technology; and
- limit the ability of remote management/access.

**Note:** Implementation of Level 2 requires that **both** Level 1 and Level 2 settings are applied.

- **Level 2 (L2) + BitLocker (BL)**

This profile extends the "Level 2 (L2)" profile and includes BitLocker-related recommendations.

- **Level 2 (L2) + Next Generation Windows Security (NG)**

This profile extends the "Level 2 (L2)" profile and includes Next Generation Windows Security-related recommendations.

- **Level 2 (L2) + BitLocker (BL) + Next Generation Windows Security (NG)**

This profile extends the "Level 2 (L2)" profile and includes BitLocker and Next Generation Windows Security-related recommendations.

- **BitLocker (BL) - optional add-on for when BitLocker is deployed**

This profile contains BitLocker-related recommendations, if your organization chooses to use it. It is intended be an optional "add-on" to the Level 1 (L1) or Level 2 (L2) profiles.

- **Next Generation Windows Security (NG) - optional add-on for use in the newest hardware and configuration environments**

This profile contains advanced Windows security features that have specific configuration dependencies, and may not be compatible with all systems. It therefore requires special attention to detail and testing before implementation. If your environment supports these features, they are highly recommended as they have tangible security benefits. This profile is intended to be an optional "add-on" to the Level 1 (L1) or Level 2 (L2) profiles.

# Acknowledgements

This benchmark exemplifies the great things a community of users, vendors, and subject matter experts can accomplish through consensus collaboration. The CIS community thanks the entire consensus team with special recognition to the following individuals who contributed greatly to the creation of this guide:

The Center for Internet Security extends special recognition and thanks to Rick Munck from Microsoft, as well as Mike Harris from General Dynamics Information Technology for their collaboration developing the configuration recommendations contained in this document.

# Recommendations

## **1 Account Policies**

This section contains recommendations for account policies.

### **1.1 Password Policy**

This section contains recommendations for password policy.

#### ***1.1.1 (L1) Ensure 'Enforce password history' is set to '24 or more passwords' (Automated)***

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

This policy setting determines the number of renewed, unique passwords that have to be associated with a user account before you can reuse an old password. The value for this policy setting must be between 0 and 24 passwords. The default value for Windows Vista is 0 passwords, but the default setting in a domain is 24 passwords. To maintain the effectiveness of this policy setting, use the Minimum password age setting to prevent users from repeatedly changing their password.

The recommended state for this setting is: 24 or more passwords.

##### **Rationale:**

The longer a user uses the same password, the greater the chance that an attacker can determine the password through brute force attacks. Also, any accounts that may have been compromised will remain exploitable for as long as the password is left unchanged. If password changes are required but password reuse is not prevented, or if users continually reuse a small number of passwords, the effectiveness of a good password policy is greatly reduced.

If you specify a low number for this policy setting, users will be able to use the same small number of passwords repeatedly. If you do not also configure the Minimum password age setting, users might repeatedly change their passwords until they can reuse their original password.

## **Impact:**

The major impact of this configuration is that users must create a new password every time they are required to change their old one. If users are required to change their passwords to new unique values, there is an increased risk of users who write their passwords somewhere so that they do not forget them. Another risk is that users may create passwords that change incrementally (for example, password01, password02, and so on) to facilitate memorization but make them easier to guess. Also, an excessively low value for the Minimum password age setting will likely increase administrative overhead, because users who forget their passwords might ask the help desk to reset them frequently.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeviceLock  
:DevicePasswordHistory_ProviderSet
```

## **To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 24 or more passwords.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\DeviceLock:DevicePasswordHistory
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Required and 24 or more passwords:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Device restrictions)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Device restrictions/Password
Setting Name:	Password
Configuration:	Required

*AND*

Path:	Device restrictions/Password
Setting Name:	Prevent reuse of previous passwords
Configuration:	24

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This setting can also be created via a *Custom Configuration Profile* using the following OMA-URI:

./Device/Vendor/MSFT/Policy/Config/DeviceLock/DevicePasswordHistory
---

## **Default Value:**

24 passwords remembered on domain members. 0 passwords remembered on stand-alone workstations.

**References:**

1. <https://docs.microsoft.com/en-us/windows/client-management/mdm/policy-csp-devicelock#devicelock-devicepasswordhistory>

**CIS Controls:**

Version 7

**16.2 Configure Centralized Point of Authentication**

Configure access for all accounts through as few centralized points of authentication as possible, including network, security, and cloud systems.

### **1.1.2 (L1) Ensure 'Maximum password age' is set to '60 or fewer days, but not 0' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting defines how long a user can use their password before it expires.

Values for this policy setting range from 0 to 999 days. If you set the value to 0, the password will never expire.

Because attackers can crack passwords, the more frequently you change the password the less opportunity an attacker has to use a cracked password. However, the lower this value is set, the higher the potential for an increase in calls to help desk support due to users having to change their password or forgetting which password is current.

The recommended state for this setting is 60 or fewer days, but not 0.

#### **Rationale:**

The longer a password exists the higher the likelihood that it will be compromised by a brute force attack, by an attacker gaining general knowledge about the user, or by the user sharing the password. Configuring the Maximum password age setting to 0 so that users are never required to change their passwords is a major security risk because that allows a compromised password to be used by the malicious user for as long as the valid user has authorized access.

#### **Impact:**

If the Maximum password age setting is too low, users are required to change their passwords very often. Such a configuration can reduce security in the organization, because users might write their passwords in an insecure location or lose them. If the value for this policy setting is too high, the level of security within an organization is reduced because it allows potential attackers more time in which to discover user passwords or to use compromised accounts.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeviceLock  
:DevicePasswordExpiration_ProviderSet
```

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 60 or fewer days, but not 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\DeviceLock:DevicePasswordExpiration
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Required and 60 or fewer days, but not 0:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Device restrictions)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Device restrictions/Password
Setting Name:	Password
Configuration:	Required

*AND*

Path:	Device restrictions/Password
Setting Name:	Password expiration (days)
Configuration:	60

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This setting can also be created via a *Custom Configuration Profile* using the following OMA-URI:

./Device/Vendor/MSFT/Policy/Config/DeviceLock/DevicePasswordExpiration
--

## **Default Value:**

42 days.

**References:**

1. <https://docs.microsoft.com/en-us/windows/client-management/mdm/policy-csp-devicelock#devicelock-enforcelockscreensandlogonimage>

**CIS Controls:**

Version 7

**16.10 Ensure All Accounts Have An Expiration Date**

Ensure that all accounts have an expiration date that is monitored and enforced.

### **1.1.3 (L1) Ensure 'Minimum password age' is set to '1 or more day(s)' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting determines the number of days that you must use a password before you can change it. The range of values for this policy setting is between 1 and 999 days. (You may also set the value to 0 to allow immediate password changes.) The default value for this setting is 0 days.

The recommended state for this setting is: 1 or more day(s).

#### **Rationale:**

Users may have favorite passwords that they like to use because they are easy to remember and they believe that their password choice is secure from compromise. Unfortunately, passwords are compromised and if an attacker is targeting a specific individual's user account, with foreknowledge of data about that user, reuse of old passwords can cause a security breach. To address password reuse a combination of security settings is required. Using this policy setting with the Enforce password history setting prevents the easy reuse of old passwords. For example, if you configure the Enforce password history setting to ensure that users cannot reuse any of their last 12 passwords, they could change their password 13 times in a few minutes and reuse the password they started with, unless you also configure the Minimum password age setting to a number that is greater than 0. You must configure this policy setting to a number that is greater than 0 for the Enforce password history setting to be effective.

#### **Impact:**

If an administrator sets a password for a user but wants that user to change the password when the user first logs on, the administrator must select the User must change password at next logon check box, or the user will not be able to change the password until the next day.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeviceLock  
:MinimumPasswordAge\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1 or more day(s).

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\  
Device\DeviceLock:MinimumPasswordAge

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to 1 or more day(s):

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/DeviceLock/MinimumPasswordAge
Data type:	Integer
Value:	1 or more day(s)

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This setting can also be created via a *Custom Configuration Profile* using the following OMA-URI:

./Device/Vendor/MSFT/Policy/Config/DeviceLock/MinimumPasswordAge
--

## **Default Value:**

1 day on domain members. 0 days on stand-alone workstations.

## **References:**

1. <https://docs.microsoft.com/en-us/windows/client-management/mdm/policy-csp-devicelock#devicelock-enforcelockscreensandlogonimage>

**CIS Controls:**

Version 7

**16.10 Ensure All Accounts Have An Expiration Date**

Ensure that all accounts have an expiration date that is monitored and enforced.

### **1.1.4 (L1) Ensure 'Minimum password length' is set to '14 or more characters' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting determines the least number of characters that make up a password for a user account. There are many different theories about how to determine the best password length for an organization, but perhaps "passphrase" is a better term than "password." In Microsoft Windows 2000 and newer, passphrases can be quite long and can include spaces. Therefore, a phrase such as "I want to drink a \$5 milkshake" is a valid passphrase; it is a considerably stronger password than an 8 or 10 character string of random numbers and letters, and yet is easier to remember. Users must be educated about the proper selection and maintenance of passwords, especially with regard to password length. In enterprise environments, the ideal value for the Minimum password length setting is 14 characters, however you should adjust this value to meet your organization's business requirements.

The recommended state for this setting is: 14 or more characters.

#### **Rationale:**

Types of password attacks include dictionary attacks (which attempt to use common words and phrases) and brute force attacks (which try every possible combination of characters). Also, attackers sometimes try to obtain the account database so they can use tools to discover the accounts and passwords.

#### **Impact:**

Requirements for extremely long passwords can actually decrease the security of an organization, because users might leave the information in an insecure location or lose it. If very long passwords are required, mistyped passwords could cause account lockouts and increase the volume of help desk calls. If your organization has issues with forgotten passwords due to password length requirements, consider teaching your users about passphrases, which are often easier to remember and, due to the larger number of character combinations, much harder to discover.

**Note:** Older versions of Windows such as Windows 98 and Windows NT 4.0 do not support passwords that are longer than 14 characters. Computers that run these older operating

systems are unable to authenticate with computers or domains that use accounts that require long passwords.

#### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeviceLock  
:MinDevicePasswordLength\_ProviderSet

#### **To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 14 or more characters.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\  
Device\DeviceLock:MinDevicePasswordLength

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Required and 14 or more characters:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Device restrictions)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Device restrictions/Password
Setting Name:	Password
Configuration:	Required

*AND*

Path:	Device restrictions/Password
Setting Name:	Minimum password length
Configuration:	14

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This setting can also be created via a *Custom Configuration Profile* using the following OMA-URI:

./Device/Vendor/MSFT/Policy/Config/DeviceLock/MinDevicePasswordLength
---

## **Default Value:**

7 characters on domain members. 0 characters on stand-alone servers.

**CIS Controls:**

Version 7

**16.10 Ensure All Accounts Have An Expiration Date**

Ensure that all accounts have an expiration date that is monitored and enforced.

**1.1.5 (L1) Ensure 'Password must meet complexity requirements' is set to 'Numbers, lowercase, uppercase and special characters required' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting checks all new passwords to ensure that they meet basic requirements for strong passwords.

When this policy is enabled, passwords must meet the following minimum requirements:

- Not contain the user's account name or parts of the user's full name that exceed two consecutive characters
- Be at least six characters in length
- Contain characters from three of the following categories:
  - English uppercase characters (A through Z)
  - English lowercase characters (a through z)
  - Base 10 digits (0 through 9)
  - Non-alphabetic characters (for example, !, \$, #, %)
  - A catch-all category of any Unicode character that does not fall under the previous four categories. This fifth category can be regionally specific.

Each additional character in a password increases its complexity exponentially. For instance, a seven-character, all lower-case alphabetic password would have 267 (approximately  $8 \times 10^9$  or 8 billion) possible combinations. At 1,000,000 attempts per second (a capability of many password-cracking utilities), it would only take 133 minutes to crack. A seven-character alphabetic password with case sensitivity has 527 combinations. A seven-character case-sensitive alphanumeric password without punctuation has 627 combinations. An eight-character password has 268 (or  $2 \times 10^{11}$ ) possible combinations. Although this might seem to be a large number, at 1,000,000 attempts per second it would take only 59 hours to try all possible passwords. Remember, these times will significantly increase for passwords that use ALT characters and other special keyboard characters such as "!" or "@". Proper use of the password settings can help make it difficult to mount a brute force attack.

The recommended state for this setting is: Numbers, lowercase, uppercase and special characters required.

**Rationale:**

Passwords that contain only alphanumeric characters are extremely easy to discover with several publicly available tools.

**Impact:**

If the default password complexity configuration is retained, additional help desk calls for locked-out accounts could occur because users might not be accustomed to passwords that contain non-alphabetic characters. However, all users should be able to comply with the complexity requirement with minimal difficulty.

If your organization has more stringent security requirements, you can create a custom version of the Passfilt.dll file that allows the use of arbitrarily complex password strength rules. For example, a custom password filter might require the use of non-upper row characters. (Upper row characters are those that require you to hold down the SHIFT key and press any of the digits between 1 and 0.) A custom password filter might also perform a dictionary check to verify that the proposed password does not contain common dictionary words or fragments.

Also, the use of ALT key character combinations can greatly enhance the complexity of a password. However, such stringent password requirements can result in unhappy users and an extremely busy help desk. Alternatively, your organization could consider a requirement for all administrator passwords to use ALT characters in the 0128 - 0159 range. (ALT characters outside of this range can represent standard alphanumeric characters that would not add additional complexity to the password.)

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeviceLock  
:MinDevicePasswordComplexCharacters_ProviderSet
```

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 2.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
DeviceLock:MinDevicePasswordComplexCharacters
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Numbers, lowercase, uppercase and special characters required:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/DeviceLock/PasswordComplexity
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled on domain members. Disabled on stand-alone workstations.

## **CIS Controls:**

Version 7

### **4.4 Use Unique Passwords**

Where multi-factor authentication is not supported (such as local administrator, root, or service accounts), accounts will use passwords that are unique to that system.

#### **16.2 Configure Centralized Point of Authentication**

Configure access for all accounts through as few centralized points of authentication as possible, including network, security, and cloud systems.

## ***1.2 Account Lockout Policy***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

## ***2 Local Policies***

This section contains recommendations for local policies.

### ***2.1 Audit Policy***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

## **2.2 User Rights Assignment**

This section contains recommendations for user rights assignments.

### **2.2.1 (L1) Ensure 'Access Credential Manager as a trusted caller' is set to 'No One' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This security setting is used by Credential Manager during Backup and Restore. No accounts should have this user right, as it is only assigned to Winlogon. Users' saved credentials might be compromised if this user right is assigned to other entities.

The recommended state for this setting is: No One.

#### **Rationale:**

If an account is given this right the user of the account may create an application that calls into Credential Manager and is returned the credentials for another user.

#### **Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:AccessCredentialManagerAsTrustedCaller_ProviderSet
```

**Note:** If there is a registry key that ends with *\_Dirty* in the above registry location, an issue with the Custom Configuration Profile *Value* has been detected. In the case of a recommendation that does not have a value assigned (ex: No one), a *\_Dirty* registry key will be present, but there are no issues with the configuration.

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to No one.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:AccessCredentialManagerAsTrustedCaller
```

**Note #2:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to No one

```
Security Settings\Local Policies\User Rights Assignment\Access Credential  
Manager as a trusted caller
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to No one:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/
          AccessCredentialManagerAsTrustedCaller
Data type: String
Value: No one
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](https://docs.microsoft.com/en-us/windows/client-management/policy-csp-userrights-windows-client-management)

**Default Value:**

No one.

**CIS Controls:**

Version 7

**4.8 Log and Alert on Changes to Administrative Group Membership**

Configure systems to issue a log entry and alert when an account is added to or removed from any group assigned administrative privileges.

## **2.2.2 (L1) Ensure 'Access this computer from the network' is set to 'Administrators, Remote Desktop Users' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting allows other users on the network to connect to the computer and is required by various network protocols that include Server Message Block (SMB)-based protocols, NetBIOS, Common Internet File System (CIFS), and Component Object Model Plus (COM+).

The recommended state for this setting is: Administrators, Remote Desktop Users.

### **Rationale:**

Users who can connect from their computer to the network can access resources on target computers for which they have permission. For example, the **Access this computer from the network** user right is required for users to connect to shared printers and folders. If this user right is assigned to the Everyone group, then anyone will be able to read the files in those shared folders. However, this situation is unlikely for new installations of Windows Server 2003 with Service Pack 1 (SP1), because the default share and NTFS permissions in Windows Server 2003 do not include the Everyone group. This vulnerability may have a higher level of risk for computers that you upgrade from Windows NT 4.0 or Windows 2000, because the default permissions for these operating systems are not as restrictive as the default permissions in Windows Server 2003.

### **Impact:**

If you remove the **Access this computer from the network** user right on Domain Controllers for all users, no one will be able to log on to the domain or use network resources. If you remove this user right on Member Servers, users will not be able to connect to those servers through the network. Successful negotiation of IPsec connections requires that the initiating machine has this right, therefore if using IPsec, it is recommended that it be assigned to the **Authenticated Users** group. If you have installed optional components such as ASP.NET or Internet Information Services (IIS), you may need to assign this user right to additional accounts that are required by those components. It is important to verify that authorized users are assigned this user right for the computers they need to access the network.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:AccessFromNetwork_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators, Remote Desktop Users.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:AccessFromNetwork
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators, Remote Desktop Users

```
Security Settings\Local Policies\User Rights Assignment\Access this computer  
from the network
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators, Remote Desktop Users:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/AccessFromNetwork
Data type: String
Value: Administrators, Remote Desktop Users
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](#)

**Default Value:**

Administrators, Backup Operators, Everyone, Users.

**CIS Controls:**

Version 7

**9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## *2.2.3 (L1) Ensure 'Act as part of the operating system' is set to 'No One' (Automated)*

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting allows a process to assume the identity of any user and thus gain access to the resources that the user is authorized to access.

The recommended state for this setting is: No One.

**Note:** This user right is considered a "sensitive privilege" for the purposes of auditing.

### **Rationale:**

The **Act as part of the operating system** user right is extremely powerful. Anyone with this user right can take complete control of the computer and erase evidence of their activities.

### **Impact:**

There should be little or no impact because the **Act as part of the operating system** user right is rarely needed by any accounts other than the Local System account, which implicitly has this right.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:ActAsPartOfTheOperatingSystem_ProviderSet
```

**Note:** If there is a registry key that ends with *\_Dirty* in the above registry location, an issue with the Custom Configuration Profile *Value* has been detected. In the case of a recommendation that does not have a value assigned (ex: No one), a *\_Dirty* registry key will be present, but there are no issues with the configuration.

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to No one.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:ActAsPartOfTheOperatingSystem
```

**Note #2:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to No one

```
Security Settings\Local Policies\User Rights Assignment\Act as part of the  
operating system
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to No one:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/
          ActAsPartOfTheOperatingSystem
Data type: String
Value: No one
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](https://docs.microsoft.com/en-us/windows/client-management/policy-csp-userrights-windows-client-management)

**Default Value:**

No one.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.2.4 (L1) Ensure 'Allow log on locally' is set to 'Administrators, Users' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting determines which users can interactively log on to computers in your environment. Logons that are initiated by pressing the CTRL+ALT+DEL key sequence on the client computer keyboard require this user right. Users who attempt to log on through Terminal Services / Remote Desktop Services or IIS also require this user right.

The recommended state for this setting is: Administrators, Users.

**Note:** The Guest account is also assigned this user right by default. Although this account is disabled by default, it's recommended that you configure this setting through Group Policy. However, this user right should generally be restricted to the Administrators and Users groups. Assign this user right to the Backup Operators group if your organization requires that they have this capability.

### **Rationale:**

Any account with the **Allow log on locally** user right can log on at the console of the computer. If you do not restrict this user right to legitimate users who need to be able to log on to the console of the computer, unauthorized users could download and run malicious software to elevate their privileges.

### **Impact:**

If you remove these default groups, you could limit the abilities of users who are assigned to specific administrative roles in your environment. You should confirm that delegated activities will not be adversely affected by any changes that you make to the **Allow log on locally** user right.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:AllowLocalLogOn_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators, Users.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:AllowLocalLogOn
```

**Note #2:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators, Users

```
Security Settings\Local Policies\User Rights Assignment\Allow log on locally
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators, Users:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/AllowLocalLogOn
Data type: String
Value: Administrators, Users
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](#)

**Default Value:**

Administrators, Backup Operators, Guest, Users.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.2.5 (L1) Ensure 'Back up files and directories' is set to 'Administrators' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting allows users to circumvent file and directory permissions to back up the system. This user right is enabled only when an application (such as NTBACKUP) attempts to access a file or directory through the NTFS file system backup application programming interface (API). Otherwise, the assigned file and directory permissions apply.

The recommended state for this setting is: Administrators.

**Note:** This user right is considered a "sensitive privilege" for the purposes of auditing.

### **Rationale:**

Users who are able to back up data from a computer could take the backup media to a non-domain computer on which they have administrative privileges and restore the data. They could take ownership of the files and view any unencrypted data that is contained within the backup set.

### **Impact:**

Changes in the membership of the groups that have the **Back up files and directories** user right could limit the abilities of users who are assigned to specific administrative roles in your environment. You should confirm that authorized backup administrators are still able to perform backup operations.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:BackupFilesAndDirectories_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:BackupFilesAndDirectories
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators

```
Security Settings\Local Policies\User Rights Assignment\Back up files and  
directories
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/
          BackupFilesAndDirectories
Data type: String
Value: Administrators
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](https://docs.microsoft.com/en-us/windows/client-management/policy-csp-userrights-windows-client-management)

**Default Value:**

Administrators, Backup Operators.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.2.6 (L1) Ensure 'Change the system time' is set to 'Administrators, LOCAL SERVICE' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting determines which users and groups can change the time and date on the internal clock of the computers in your environment. Users who are assigned this user right can affect the appearance of event logs. When a computer's time setting is changed, logged events reflect the new time, not the actual time that the events occurred.

The recommended state for this setting is: Administrators, LOCAL SERVICE.

**Note:** Discrepancies between the time on the local computer and on the Domain Controllers in your environment may cause problems for the Kerberos authentication protocol, which could make it impossible for users to log on to the domain or obtain authorization to access domain resources after they are logged on. Also, problems will occur when Group Policy is applied to client computers if the system time is not synchronized with the Domain Controllers.

### **Rationale:**

Users who can change the time on a computer could cause several problems. For example, time stamps on event log entries could be made inaccurate, time stamps on files and folders that are created or modified could be incorrect, and computers that belong to a domain may not be able to authenticate themselves or users who try to log on to the domain from them. Also, because the Kerberos authentication protocol requires that the requestor and authenticator have their clocks synchronized within an administrator-defined skew period, an attacker who changes a computer's time may cause that computer to be unable to obtain or grant Kerberos tickets.

The risk from these types of events is mitigated on most Domain Controllers, Member Servers, and end-user computers because the Windows Time service automatically synchronizes time with Domain Controllers in the following ways:

- All client desktop computers and Member Servers use the authenticating Domain Controller as their inbound time partner.
- All Domain Controllers in a domain nominate the Primary Domain Controller (PDC) Emulator operations master as their inbound time partner.

- All PDC Emulator operations masters follow the hierarchy of domains in the selection of their inbound time partner.
- The PDC Emulator operations master at the root of the domain is authoritative for the organization. Therefore it is recommended that you configure this computer to synchronize with a reliable external time server.

This vulnerability becomes much more serious if an attacker is able to change the system time and then stop the Windows Time service or reconfigure it to synchronize with a time server that is not accurate.

### **Impact:**

There should be no impact, because time synchronization for most organizations should be fully automated for all computers that belong to the domain. Computers that do not belong to the domain should be configured to synchronize with an external source.

### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights :ChangeSystemTime_ProviderSet
```

### **To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators, LOCAL SERVICE.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\UserRights:ChangeSystemTime
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators, LOCAL SERVICE

```
Security Settings\Local Policies\User Rights Assignment\Change the system time
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators, LOCAL SERVICE:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/ChangeSystemTime
Data type: String
Value: Administrators, LOCAL SERVICE
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](#)

**Default Value:**

Administrators, LOCAL SERVICE.

**CIS Controls:**

Version 7

**4.3 Ensure the Use of Dedicated Administrative Accounts**

Ensure that all users with administrative account access use a dedicated or secondary account for elevated activities. This account should only be used for administrative activities and not internet browsing, email, or similar activities.

## **2.2.7 (L1) Ensure 'Create a pagefile' is set to 'Administrators' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting allows users to change the size of the pagefile. By making the pagefile extremely large or extremely small, an attacker could easily affect the performance of a compromised computer.

The recommended state for this setting is: Administrators.

### **Rationale:**

Users who can change the page file size could make it extremely small or move the file to a highly fragmented storage volume, which could cause reduced computer performance.

### **Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:CreatePageFile_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:CreatePageFile
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators

```
Security Settings\Local Policies\User Rights Assignment\Create a pagefile
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/CreatePageFile
Data type: String
Value: Administrators
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](#)

**Default Value:**

Administrators.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.2.8 (L1) Ensure 'Create a token object' is set to 'No One' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting allows a process to create an access token, which may provide elevated rights to access sensitive data.

The recommended state for this setting is: No One.

**Note:** This user right is considered a "sensitive privilege" for the purposes of auditing.

### **Rationale:**

A user account that is given this user right has complete control over the system and can lead to the system being compromised. It is highly recommended that you do not assign any user accounts this right.

The operating system examines a user's access token to determine the level of the user's privileges. Access tokens are built when users log on to the local computer or connect to a remote computer over a network. When you revoke a privilege, the change is immediately recorded, but the change is not reflected in the user's access token until the next time the user logs on or connects. Users with the ability to create or modify tokens can change the level of access for any currently logged on account. They could escalate their own privileges or create a DoS condition.

### **Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:CreateToken_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to No one.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:CreateToken
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to No one

```
Security Settings\Local Policies\User Rights Assignment\Create a token object
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to No one:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/UserRights/CreateToken
Data type:	String
Value:	No one

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](#)

**Default Value:**

No one.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.2.9 (L1) Ensure 'Create global objects' is set to 'Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting determines whether users can create global objects that are available to all sessions. Users can still create objects that are specific to their own session if they do not have this user right.

Users who can create global objects could affect processes that run under other users' sessions. This capability could lead to a variety of problems, such as application failure or data corruption.

The recommended state for this setting is: Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE.

### **Rationale:**

Users who can create global objects could affect Windows services and processes that run under other user or system accounts. This capability could lead to a variety of problems, such as application failure, data corruption and elevation of privilege.

### **Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:CreateGlobalObjects_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:CreateGlobalObjects
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE

```
Security Settings\Local Policies\User Rights Assignment>Create global objects
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/
          CreateGlobalObjects
Data type: String
Value: Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](https://docs.microsoft.com/en-us/windows/client-management/policy-csp-userrights-windows-client-management)

**Default Value:**

Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.2.10 (L1) Ensure 'Create permanent shared objects' is set to 'No One' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This user right is useful to kernel-mode components that extend the object namespace. However, components that run in kernel mode have this user right inherently. Therefore, it is typically not necessary to specifically assign this user right.

The recommended state for this setting is: No One.

### **Rationale:**

Users who have the **Create permanent shared objects** user right could create new shared objects and expose sensitive data to the network.

### **Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:CreatePermanentSharedObjects_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to No one.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:CreatePermanentSharedObjects
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to No one

```
Security Settings\Local Policies\User Rights Assignment\Create permanent  
shared objects
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to No one:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/
          CreatePermanentSharedObjects
Data type: String
Value: No one
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](https://docs.microsoft.com/en-us/windows/client-management/policy-csp-userrights-windows-client-management)

**Default Value:**

No one.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.2.11 (L1) Configure 'Create symbolic links' is set to 'Administrators' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting determines which users can create symbolic links. In Windows Vista, existing NTFS file system objects, such as files and folders, can be accessed by referring to a new kind of file system object called a symbolic link. A symbolic link is a pointer (much like a shortcut or .lnk file) to another file system object, which can be a file, folder, shortcut or another symbolic link. The difference between a shortcut and a symbolic link is that a shortcut only works from within the Windows shell. To other programs and applications, shortcuts are just another file, whereas with symbolic links, the concept of a shortcut is implemented as a feature of the NTFS file system.

Symbolic links can potentially expose security vulnerabilities in applications that are not designed to use them. For this reason, the privilege for creating symbolic links should only be assigned to trusted users. By default, only Administrators can create symbolic links.

The recommended state for this setting is: Administrators and (when the Hyper-V feature is installed) NT VIRTUAL MACHINE\Virtual Machines.

### **Rationale:**

Users who have the **Create symbolic links** user right could inadvertently or maliciously expose your system to symbolic link attacks. Symbolic link attacks can be used to change the permissions on a file, to corrupt data, to destroy data, or as a Denial of Service attack.

### **Impact:**

In most cases there will be no impact because this is the default configuration. However, on Windows Workstations with the Hyper-V feature installed, this user right should also be granted to the special group NT VIRTUAL MACHINE\Virtual Machines - otherwise you will not be able to create new virtual machines.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:CreateSymbolicLinks_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:CreateSymbolicLinks
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators

```
Security Settings\Local Policies\User Rights Assignment>Create symbolic links
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/
          CreateSymbolicLinks
Data type: String
Value: Administrators
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](https://docs.microsoft.com/en-us/windows/client-management/policy-csp-userrights-windows-client-management)

**Default Value:**

Administrators.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.2.12 (L1) Ensure 'Debug programs' is set to 'Administrators'** **(Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting determines which user accounts will have the right to attach a debugger to any process or to the kernel, which provides complete access to sensitive and critical operating system components. Developers who are debugging their own applications do not need to be assigned this user right; however, developers who are debugging new system components will need it.

The recommended state for this setting is: Administrators.

**Note:** This user right is considered a "sensitive privilege" for the purposes of auditing.

### **Rationale:**

The **Debug programs** user right can be exploited to capture sensitive computer information from system memory, or to access and modify kernel or application structures. Some attack tools exploit this user right to extract hashed passwords and other private security information, or to insert rootkit code. By default, the **Debug programs** user right is assigned only to administrators, which helps to mitigate the risk from this vulnerability.

### **Impact:**

If you revoke this user right, no one will be able to debug programs. However, typical circumstances rarely require this capability on production computers. If a problem arises that requires an application to be debugged on a production server, you can move the server to a different OU temporarily and assign the **Debug programs** user right to a separate Group Policy for that OU.

The service account that is used for the cluster service needs the **Debug programs** user right; if it does not have it, Windows Clustering will fail.

Tools that are used to manage processes will be unable to affect processes that are not owned by the person who runs the tools. For example, the Windows Server 2003 Resource Kit tool `Kill.exe` requires this user right for administrators to terminate processes that they did not start.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:DebugPrograms_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:DebugPrograms
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators

```
Security Settings\Local Policies\User Rights Assignment\Debug programs
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/DebugPrograms
Data type: String
Value: Administrators
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](#)

**Default Value:**

Administrators.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.2.13 (L1) Ensure 'Deny access to this computer from the network' to include 'Guests, Local account' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting prohibits users from connecting to a computer from across the network, which would allow users to access and potentially modify data remotely. In high security environments, there should be no need for remote users to access data on a computer. Instead, file sharing should be accomplished through the use of network servers. This user right supersedes the **Access this computer from the network** user right if an account is subject to both policies.

The recommended state for this setting is to include: Guests, Local account.

**Caution:** Configuring a standalone (non-domain-joined) workstation as described above may result in an inability to remotely administer the workstation.

**Note:** The security identifier Local account is not available in Windows 7 and Windows 8.0 unless [MSKB 2871997](#) has been installed.

### **Rationale:**

Users who can log on to the computer over the network can enumerate lists of account names, group names, and shared resources. Users with permission to access shared folders and files can connect over the network and possibly view or modify data.

### **Impact:**

If you configure the **Deny access to this computer from the network** user right for other groups, you could limit the abilities of users who are assigned to specific administrative roles in your environment. You should verify that delegated tasks will not be negatively affected.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:DenyAccessFromNetwork_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Guests, Local account.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:DenyAccessFromNetwork
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to include Guests, Local account

```
Security Settings\Local Policies\User Rights Assignment\Deny access to this  
computer from the network
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Guests, Local account:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/UserRights/ DenyAccessFromNetwork
Data type:	String
Value:	Guests, Local account

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](https://docs.microsoft.com/en-us/windows/client-management/policy-csp-userrights-windows-client-management)

**Default Value:**

Guest.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## *2.2.14 (L1) Ensure 'Deny log on locally' to include 'Guests' (Automated)*

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This security setting determines which users are prevented from logging on at the computer. This policy setting supersedes the **Allow log on locally** policy setting if an account is subject to both policies.

The recommended state for this setting is to include: Guests.

**Important:** If you apply this security policy to the Everyone group, no one will be able to log on locally.

### **Rationale:**

Any account with the ability to log on locally could be used to log on at the console of the computer. If this user right is not restricted to legitimate users who need to log on to the console of the computer, unauthorized users might download and run malicious software that elevates their privileges.

### **Impact:**

If you assign the **Deny log on locally** user right to additional accounts, you could limit the abilities of users who are assigned to specific roles in your environment. However, this user right should explicitly be assigned to the ASPNET account on computers that run IIS 6.0. You should confirm that delegated activities will not be adversely affected.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:DenyLocalLogOn_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Guests.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:DenyLocalLogOn
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to include Guests

```
Security Settings\Local Policies\User Rights Assignment\Deny log on locally
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Guests:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/DenyLocalLogOn
Data type: String
Value: Guests
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](#)

**Default Value:**

Guest.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.2.15 (L1) Ensure 'Deny log on through Remote Desktop Services' to include 'Guests, Local account' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting determines whether users can log on as Remote Desktop clients. After the baseline workstation is joined to a domain environment, there is no need to use local accounts to access the workstation from the network. Domain accounts can access the workstation for administration and end-user processing. This user right supersedes the **Allow log on through Remote Desktop Services** user right if an account is subject to both policies.

The recommended state for this setting is to include: Guests, Local account.

**Caution:** Configuring a standalone (non-domain-joined) workstation as described above may result in an inability to remotely administer the workstation.

**Note:** The security identifier Local account is not available in Windows 7 and Windows 8.0 unless [MSKB 2871997](#) has been installed.

**Note #2:** In all versions of Windows prior to Windows 7, **Remote Desktop Services** was known as **Terminal Services**, so you should substitute the older term if comparing against an older OS.

### **Rationale:**

Any account with the right to log on through Remote Desktop Services could be used to log on to the remote console of the computer. If this user right is not restricted to legitimate users who need to log on to the console of the computer, unauthorized users might download and run malicious software that elevates their privileges.

## **Impact:**

If you assign the **Deny log on through Remote Desktop Services** user right to other groups, you could limit the abilities of users who are assigned to specific administrative roles in your environment. Accounts that have this user right will be unable to connect to the computer through either Remote Desktop Services or Remote Assistance. You should confirm that delegated tasks will not be negatively impacted.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:DenyRemoteDesktopServicesLogOn_ProviderSet
```

### **To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Guests, Local account.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:DenyRemoteDesktopServicesLogOn
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to include Guests, Local account

```
Security Settings\Local Policies\User Rights Assignment\Deny log on through  
Remote Desktop Services
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Guests, Local account:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/
          DenyRemoteDesktopServicesLogOn
Data type: String
Value: Guests, Local account
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](https://docs.microsoft.com/en-us/windows/client-management/policy-csp-userrights-windows-client-management)

**Default Value:**

No one.

**CIS Controls:**

Version 7

**18.2 Ensure Explicit Error Checking is Performed for All In-house Developed Software**

For in-house developed software, ensure that explicit error checking is performed and documented for all input, including for size, data type, and acceptable ranges or formats.

**2.2.16 (L1) Ensure 'Enable computer and user accounts to be trusted for delegation' is set to 'No One' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting allows users to change the Trusted for Delegation setting on a computer object in Active Directory. Abuse of this privilege could allow unauthorized users to impersonate other users on the network.

The recommended state for this setting is: No One.

**Note:** This user right is considered a "sensitive privilege" for the purposes of auditing.

**Rationale:**

Misuse of the **Enable computer and user accounts to be trusted for delegation** user right could allow unauthorized users to impersonate other users on the network. An attacker could exploit this privilege to gain access to network resources and make it difficult to determine what has happened after a security incident.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights :EnableDelegation\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to No one.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\ UserRights:EnableDelegation

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to No one

Security Settings\Local Policies\User Rights Assignment\Enable computer and user accounts to be trusted for delegation

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to No one:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/EnableDelegation
Data type: String
Value: No one
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](#)

**Default Value:**

No one.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**2.2.17 (L1) Ensure 'Force shutdown from a remote system' is set to 'Administrators' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting allows users to shut down Windows Vista-based and newer computers from remote locations on the network. Anyone who has been assigned this user right can cause a denial of service (DoS) condition, which would make the computer unavailable to service user requests. Therefore, it is recommended that only highly trusted administrators be assigned this user right.

The recommended state for this setting is: Administrators.

**Rationale:**

Any user who can shut down a computer could cause a DoS condition to occur. Therefore, this user right should be tightly restricted.

**Impact:**

If you remove the **Force shutdown from a remote system** user right from the Server Operators group you could limit the abilities of users who are assigned to specific administrative roles in your environment. You should confirm that delegated activities will not be adversely affected.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:RemoteShutdown_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:RemoteShutdown
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators

```
Security Settings\Local Policies\User Rights Assignment\Force shutdown from a  
remote system
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/RemoteShutdown
Data type: String
Value: Administrators
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](#)

**Default Value:**

None - this is the default behavior.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.2.18 (L1) Ensure 'Generate security audits' is set to 'LOCAL SERVICE, NETWORK SERVICE' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting determines which users or processes can generate audit records in the Security log.

The recommended state for this setting is: LOCAL SERVICE, NETWORK SERVICE.

**Note:** This user right is considered a "sensitive privilege" for the purposes of auditing.

### **Rationale:**

An attacker could use this capability to create a large number of audited events, which would make it more difficult for a system administrator to locate any illicit activity. Also, if the event log is configured to overwrite events as needed, any evidence of unauthorized activities could be overwritten by a large number of unrelated events.

### **Impact:**

On most computers, this is the default configuration and there will be no negative impact. However, if you have installed *Web Server (IIS)*, you will need to allow the IIS application pool(s) to be granted this user right.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:GenerateSecurityAudits_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to LOCAL SERVICE, NETWORK SERVICE.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:GenerateSecurityAudits
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to LOCAL SERVICE, NETWORK SERVICE

```
Security Settings\Local Policies\User Rights Assignment\Generate security  
audits
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to LOCAL SERVICE, NETWORK SERVICE:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/
GenerateSecurityAudits
Data type: String
Value: LOCAL SERVICE, NETWORK SERVICE
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](https://docs.microsoft.com/en-us/windows/client-management/policy-csp-userrights-windows-client-management)

**Default Value:**

LOCAL SERVICE, NETWORK SERVICE.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**2.2.19 (L1) Ensure 'Impersonate a client after authentication' is set to 'Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE'**  
**(Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

The policy setting allows programs that run on behalf of a user to impersonate that user (or another specified account) so that they can act on behalf of the user. If this user right is required for this kind of impersonation, an unauthorized user will not be able to convince a client to connect—for example, by remote procedure call (RPC) or named pipes—to a service that they have created to impersonate that client, which could elevate the unauthorized user's permissions to administrative or system levels.

Services that are started by the Service Control Manager have the built-in Service group added by default to their access tokens. COM servers that are started by the COM infrastructure and configured to run under a specific account also have the Service group added to their access tokens. As a result, these processes are assigned this user right when they are started.

Also, a user can impersonate an access token if any of the following conditions exist:

- The access token that is being impersonated is for this user.
- The user, in this logon session, logged on to the network with explicit credentials to create the access token.
- The requested level is less than Impersonate, such as Anonymous or Identify.

An attacker with the **Impersonate a client after authentication** user right could create a service, trick a client to make them connect to the service, and then impersonate that client to elevate the attacker's level of access to that of the client.

The recommended state for this setting is: Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE.

**Note:** This user right is considered a "sensitive privilege" for the purposes of auditing.

## Rationale:

An attacker with the **Impersonate a client after authentication** user right could create a service, trick a client to make them connect to the service, and then impersonate that client to elevate the attacker's level of access to that of the client.

## Impact:

In most cases this configuration will have no impact. If you have installed *Web Server (IIS)*, you will need to also assign the user right to `IIS_IUSRS`.

## Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:ImpersonateClient_ProviderSet
```

### To confirm that the policy was properly applied to the system, check one of the following locations:

Navigate to the following registry location and confirm it is set to Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:ImpersonateClient
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE

```
Security Settings\Local Policies\User Rights Assignment\Impersonate a client  
after authentication
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/ImpersonateClient
Data type: String
Value: Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](https://docs.microsoft.com/en-us/windows/client-management/policy-csp-userrights-windows-client-management)

**Default Value:**

Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.2.20 (L1) Ensure 'Increase scheduling priority' is set to 'Administrators, Window Manager\Window Manager Group' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting determines whether users can increase the base priority class of a process. (It is not a privileged operation to increase relative priority within a priority class.) This user right is not required by administrative tools that are supplied with the operating system but might be required by software development tools.

The recommended state for this setting is: Administrators, Window Manager\Window Manager Group.

### **Rationale:**

A user who is assigned this user right could increase the scheduling priority of a process to Real-Time, which would leave little processing time for all other processes and could lead to a DoS condition.

### **Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:IncreaseSchedulingPriority_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators, Window Manager\Window Manager Group.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:IncreaseSchedulingPriority
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators, Window Manager\Window Manager Group

```
Security Settings\Local Policies\User Rights Assignment\Increase scheduling  
priority
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators, Window Manager\Window Manager Group:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/
IncreaseSchedulingPriority
Data type: String
Value: Administrators, Window Manager\Window Manager Group
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](https://docs.microsoft.com/en-us/windows/client-management/policy-csp-userrights-windows-client-management)

**Default Value:**

On Windows 10 R1607 or older: Administrators.

On Windows 10 R1703 or newer: Administrators, Window Manager\Window Manager Group.

**CIS Controls:**

Version 7

5.1 Establish Secure Configurations

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.2.21 (L1) Ensure 'Load and unload device drivers' is set to 'Administrators' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting allows users to dynamically load a new device driver on a system. An attacker could potentially use this capability to install malicious code that appears to be a device driver. This user right is required for users to add local printers or printer drivers in Windows Vista.

The recommended state for this setting is: Administrators.

**Note:** This user right is considered a "sensitive privilege" for the purposes of auditing.

### **Rationale:**

Device drivers run as highly privileged code. A user who has the **Load and unload device drivers** user right could unintentionally install malicious code that masquerades as a device driver. Administrators should exercise greater care and install only drivers with verified digital signatures.

### **Impact:**

If you remove the **Load and unload device drivers** user right from the Print Operators group or other accounts you could limit the abilities of users who are assigned to specific administrative roles in your environment. You should ensure that delegated tasks will not be negatively affected.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:LoadUnloadDeviceDrivers_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:LoadUnloadDeviceDrivers
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators

```
Security Settings\Local Policies\User Rights Assignment\Load and unload  
device drivers
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/
          LoadUnloadDeviceDrivers
Data type: String
Value: Administrators
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](https://docs.microsoft.com/en-us/windows/client-management/policy-csp-userrights-windows-client-management)

**Default Value:**

Administrators.

**CIS Controls:**

Version 7

**4.1 Maintain Inventory of Administrative Accounts**

Use automated tools to inventory all administrative accounts, including domain and local accounts, to ensure that only authorized individuals have elevated privileges.

## **2.2.22 (L1) Ensure 'Lock pages in memory' is set to 'No One' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting allows a process to keep data in physical memory, which prevents the system from paging the data to virtual memory on disk. If this user right is assigned, significant degradation of system performance can occur.

The recommended state for this setting is: No One.

### **Rationale:**

Users with the **Lock pages in memory** user right could assign physical memory to several processes, which could leave little or no RAM for other processes and result in a DoS condition.

### **Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:LockMemory_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to No One.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:LockMemory
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to No one

```
Security Settings\Local Policies\User Rights Assignment\Lock pages in memory
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to No One:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/UserRights/LockMemory
Data type:	String
Value:	No One

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](#)

**Default Value:**

No one.

**CIS Controls:**

Version 7

**4.1 Maintain Inventory of Administrative Accounts**

Use automated tools to inventory all administrative accounts, including domain and local accounts, to ensure that only authorized individuals have elevated privileges.

**2.2.23 (L1) Ensure 'Manage auditing and security log' is set to 'Administrators' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting determines which users can change the auditing options for files and directories and clear the Security log.

The recommended state for this setting is: Administrators.

**Note:** This user right is considered a "sensitive privilege" for the purposes of auditing.

**Rationale:**

The ability to manage the Security event log is a powerful user right and it should be closely guarded. Anyone with this user right can clear the Security log to erase important evidence of unauthorized activity.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:ManageAuditingAndSecurityLog_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:ManageAuditingAndSecurityLog
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators

```
Security Settings\Local Policies\User Rights Assignment\Manage auditing and  
security log
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/
          ManageAuditingAndSecurityLog
Data type: String
Value: Administrators
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](https://docs.microsoft.com/en-us/windows/client-management/policy-csp-userrights-windows-client-management)

**Default Value:**

Administrators.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.2.24 (L1) Ensure 'Modify an object label' is set to 'No One' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This privilege determines which user accounts can modify the integrity label of objects, such as files, registry keys, or processes owned by other users. Processes running under a user account can modify the label of an object owned by that user to a lower level without this privilege.

The recommended state for this setting is: No One.

### **Rationale:**

By modifying the integrity label of an object owned by another user a malicious user may cause them to execute code at a higher level of privilege than intended.

### **Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:ModifyObjectLabel_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to No One.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:ModifyObjectLabel
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to No one

```
Security Settings\Local Policies\User Rights Assignment\Modify an object  
label
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to No One:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/ModifyObjectLabel
Data type: String
Value: No One
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](#)

**Default Value:**

No one.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**2.2.25 (L1) Ensure 'Modify firmware environment values' is set to 'Administrators' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting allows users to configure the system-wide environment variables that affect hardware configuration. This information is typically stored in the Last Known Good Configuration. Modification of these values could lead to a hardware failure that would result in a denial of service condition.

The recommended state for this setting is: Administrators.

**Note:** This user right is considered a "sensitive privilege" for the purposes of auditing.

**Rationale:**

Anyone who is assigned the **Modify firmware environment values** user right could configure the settings of a hardware component to cause it to fail, which could lead to data corruption or a DoS condition.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:ModifyFirmwareEnvironment_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:ModifyFirmwareEnvironment
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators

```
Security Settings\Local Policies\User Rights Assignment\Modify firmware  
environment values
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/
          ModifyFirmwareEnvironment
Data type: String
Value: Administrators
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](https://docs.microsoft.com/en-us/windows/client-management/policy-csp-userrights-windows-client-management)

**Default Value:**

Administrators.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**2.2.26 (L1) Ensure 'Perform volume maintenance tasks' is set to 'Administrators' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting allows users to manage the system's volume or disk configuration, which could allow a user to delete a volume and cause data loss as well as a denial-of-service condition.

The recommended state for this setting is: Administrators.

**Rationale:**

A user who is assigned the **Perform volume maintenance tasks** user right could delete a volume, which could result in the loss of data or a DoS condition.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:ManageVolume_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:ManageVolume
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators

```
Security Settings\Local Policies\User Rights Assignment\Perform volume  
maintenance tasks
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/ManageVolume
Data type: String
Value: Administrators
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](#)

**Default Value:**

Administrators.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## *2.2.27 (L1) Ensure 'Profile single process' is set to 'Administrators' (Automated)*

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting determines which users can use tools to monitor the performance of non-system processes. Typically, you do not need to configure this user right to use the Microsoft Management Console (MMC) Performance snap-in. However, you do need this user right if System Monitor is configured to collect data using Windows Management Instrumentation (WMI). Restricting the **Profile single process** user right prevents intruders from gaining additional information that could be used to mount an attack on the system.

The recommended state for this setting is: Administrators.

### **Rationale:**

The **Profile single process** user right presents a moderate vulnerability. An attacker with this user right could monitor a computer's performance to help identify critical processes that they might wish to attack directly. The attacker may also be able to determine what processes run on the computer so that they could identify countermeasures that they may need to avoid, such as antivirus software, an intrusion-detection system, or which other users are logged on to a computer.

### **Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:ProfileSingleProcess_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
UserRights:ProfileSingleProcess
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators

```
Security Settings\Local Policies\User Rights Assignment\Profile single  
process
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/
          ProfileSingleProcess
Data type: String
Value: Administrators
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](https://docs.microsoft.com/en-us/windows/client-management/policy-csp-userrights-windows-client-management)

**Default Value:**

Administrators.

**CIS Controls:**

Version 7

**9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **2.2.28 (L1) Ensure 'Restore files and directories' is set to 'Administrators' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting determines which users can bypass file, directory, registry, and other persistent object permissions when restoring backed up files and directories on computers that run Windows Vista (or newer) in your environment. This user right also determines which users can set valid security principals as object owners; it is similar to the **Backup files and directories** user right.

The recommended state for this setting is: Administrators.

**Note:** This user right is considered a "sensitive privilege" for the purposes of auditing.

### **Rationale:**

An attacker with the **Restore files and directories** user right could restore sensitive data to a computer and overwrite data that is more recent, which could lead to loss of important data, data corruption, or a denial of service. Attackers could overwrite executable files that are used by legitimate administrators or system services with versions that include malicious software to grant themselves elevated privileges, compromise data, or install backdoors for continued access to the computer.

**Note:** Even if the following countermeasure is configured, an attacker could still restore data to a computer in a domain that is controlled by the attacker. Therefore, it is critical that organizations carefully protect the media that is used to back up data.

### **Impact:**

If you remove the **Restore files and directories** user right from the **Backup Operators** group and other accounts you could make it impossible for users who have been delegated specific tasks to perform those tasks. You should verify that this change won't negatively affect the ability of your organization's personnel to do their jobs.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:RestoreFilesAndDirectories_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\  
Device\UserRights:RestoreFilesAndDirectories
```

**Note #2:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators

```
Security Settings\Local Policies\User Rights Assignment\Restore files and  
directories
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/
          RestoreFilesAndDirectories
Data type: String
Value: Administrators
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (□). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](https://docs.microsoft.com/en-us/windows/client-management/policy-csp-userrights-windows-client-management)

**Default Value:**

Administrators, Backup Operators.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**2.2.29 (L1) Ensure 'Take ownership of files or other objects' is set to 'Administrators' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting allows users to take ownership of files, folders, registry keys, processes, or threads. This user right bypasses any permissions that are in place to protect objects to give ownership to the specified user.

The recommended state for this setting is: Administrators.

**Note:** This user right is considered a "sensitive privilege" for the purposes of auditing.

**Rationale:**

Any users with the **Take ownership of files or other objects** user right can take control of any object, regardless of the permissions on that object, and then make any changes they wish to that object. Such changes could result in exposure of data, corruption of data, or a DoS condition.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\UserRights  
:TakeOwnership_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to Administrators.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\  
Device\UserRights:TakeOwnership
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators

```
Security Settings\Local Policies\User Rights Assignment\Take ownership of  
files or other objects
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/UserRights/TakeOwnership
Data type: String
Value: Administrators
```

**Note:** When there is more than one value that needs to be entered (ex: Guests, Administrator), the XML value of &#61440 will need to be converted to US-ASCII to separate the values in the *Value* field of the *Custom Device Configuration Policy*. This value should convert to a square with a question mark in it (). Please note that when copied from the converter to Intune a square will appear, but the value will still work. Also note that this value cannot be copied from sources like Microsoft Word. We recommend that the value be copied and used directly from the converter.

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note #2:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #3:** The following link is an alternative way to set the "User Rights Assignment" section. [Policy CSP - UserRights - Windows Client Management | Microsoft Docs](#)

**Default Value:**

Administrators.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.3 Security Options**

This section contains recommendations for security options.

### **2.3.1 Accounts**

This section contains recommendations related to default accounts.

#### ***2.3.1.1 (L1) Ensure 'Accounts: Administrator account status' is set to 'Disabled' (Automated)***

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

This policy setting enables or disables the Administrator account during normal operation. When a computer is booted into safe mode, the Administrator account is always enabled, regardless of how this setting is configured. Note that this setting will have no impact when applied to the Domain Controllers organizational unit via group policy because Domain Controllers have no local account database. It can be configured at the domain level via group policy, similar to account lockout and password policy settings.

The recommended state for this setting is: Disabled.

##### **Rationale:**

In some organizations, it can be a daunting management challenge to maintain a regular schedule for periodic password changes for local accounts. Therefore, you may want to disable the built-in Administrator account instead of relying on regular password changes to protect it from attack. Another reason to disable this built-in account is that it cannot be locked out no matter how many failed logons it accrues, which makes it a prime target for brute force attacks that attempt to guess passwords. Also, this account has a well-known security identifier (SID) and there are third-party tools that allow authentication by using the SID rather than the account name. This capability means that even if you rename the Administrator account, an attacker could launch a brute force attack by using the SID to log on.

### **Impact:**

Maintenance issues can arise under certain circumstances if you disable the Administrator account. For example, if the secure channel between a member computer and the Domain Controller fails in a domain environment for any reason and there is no other local Administrator account, you must restart in safe mode to fix the problem that broke the secure channel.

If the current Administrator password does not meet the password requirements, you will not be able to re-enable the Administrator account after it is disabled. If this situation occurs, another member of the Administrators group must set the password on the Administrator account with the Local Users and Groups tool.

### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:Accounts\_EnableAdministratorAccountStatus\_ProviderSet

### **To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following **Local Security Policy** location and confirm it is set to **Disabled**.

Computer Configuration\Policies\Windows Settings\Security Settings\Local Policies\Security Options\Accounts: Administrator account status

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          Accounts_EnableAdministratorAccountStatus
Data type: Integer
Value: 0
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Accounts* settings.

## **Default Value:**

Disabled.

## **CIS Controls:**

Version 7

### **16.8 Disable Any Unassociated Accounts**

Disable any account that cannot be associated with a business process or business owner.

### *2.3.1.2 (L1) Ensure 'Accounts: Block Microsoft accounts' is set to 'Users can't add or log on with Microsoft accounts' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting prevents users from adding new Microsoft accounts on this computer.

The recommended state for this setting is: Users can't add or log on with Microsoft accounts.

#### **Rationale:**

Organizations that want to effectively implement identity management policies and maintain firm control of what accounts are used to log onto their computers will probably want to block Microsoft accounts. Organizations may also need to block Microsoft accounts in order to meet the requirements of compliance standards that apply to their information systems.

#### **Impact:**

Users will not be able to log onto the computer with their Microsoft account.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPolicies\SecurityOptions:Accounts_BlockMicrosoftAccounts_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following **Local Security Policy** location and confirm it is set to **Users can't add or log on with Microsoft accounts**

```
Computer Configuration\Policies\Windows Settings\Security Settings\Local Policies\Security Options: Accounts: Block Microsoft accounts
```

*OR*

Navigate to the following registry location and confirm it is set to 3.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:NoConnectedUser
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Users can't add or log on with Microsoft accounts:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          Accounts_BlockMicrosoftAccounts
Data type: Integer
Value: 3
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Accounts* settings.

## **Default Value:**

Users are able to use Microsoft accounts with Windows.

## **CIS Controls:**

Version 7

### **16.2 Configure Centralized Point of Authentication**

Configure access for all accounts through as few centralized points of authentication as possible, including network, security, and cloud systems.

### **2.3.1.3 (L1) Ensure 'Accounts: Guest account status' is set to 'Disabled' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting determines whether the Guest account is enabled or disabled. The Guest account allows unauthenticated network users to gain access to the system.

The recommended state for this setting is: Disabled.

#### **Rationale:**

The default Guest account allows unauthenticated network users to log on as Guest with no password. These unauthorized users could access any resources that are accessible to the Guest account over the network. This capability means that any network shares with permissions that allow access to the Guest account, the Guests group, or the Everyone group will be accessible over the network, which could lead to the exposure or corruption of data.

#### **Impact:**

All network users will need to authenticate before they can access shared resources. If you disable the Guest account and the Network Access: Sharing and Security Model option is set to Guest Only, network logons, such as those performed by the Microsoft Network Server (SMB Service), will fail. This policy setting should have little impact on most organizations because it is the default setting in Microsoft Windows 2000, Windows XP, and Windows Server™ 2003.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPolicies\SecurityOptions:Accounts\_EnableGuestAccountStatus\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following **Local Security Policy** location and confirm it is set to **Disabled**.

Computer Configuration\Policies\Windows Settings\Security Settings\Local Policies\Security Options\Accounts: Guest account status

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/ Accounts_EnableGuestAccountStatus
Data type:	Integer
Value:	0

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Accounts* settings.

**Default Value:**

Disabled.

**CIS Controls:**

Version 7

**16.8 Disable Any Unassociated Accounts**

Disable any account that cannot be associated with a business process or business owner.

### **2.3.1.4 (L1) Ensure 'Accounts: Limit local account use of blank passwords to console logon only' is set to 'Enabled' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting determines whether local accounts that are not password protected can be used to log on from locations other than the physical computer console. If you enable this policy setting, local accounts that have blank passwords will not be able to log on to the network from remote client computers. Such accounts will only be able to log on at the keyboard of the computer.

The recommended state for this setting is: Enabled.

#### **Rationale:**

Blank passwords are a serious threat to computer security and should be forbidden through both organizational policy and suitable technical measures. In fact, the default settings for Active Directory domains require complex passwords of at least seven characters. However, if users with the ability to create new accounts bypass your domain-based password policies, they could create accounts with blank passwords. For example, a user could build a stand-alone computer, create one or more accounts with blank passwords, and then join the computer to the domain. The local accounts with blank passwords would still function. Anyone who knows the name of one of these unprotected accounts could then use it to log on.

#### **Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:Accounts_LimitLocalAccountUseOfBlankPasswordsToConsoleLogonOnly_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following **Local Security Policy** location and confirm it is set to Enabled.

```
Computer Configuration\Policies\Windows Settings\Security Settings\Local Policies\Security Options\Accounts: Limit local account use of blank passwords to console logon only
```

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Lsa:LimitBlankPasswordUse
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI:
./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/Accounts_LimitLocalAccountUseOfBlankPasswordsToConsoleLogonOnly
Data type: Integer
Value: 1
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled.

## **CIS Controls:**

Version 7

### **4.4 Use Unique Passwords**

Where multi-factor authentication is not supported (such as local administrator, root, or service accounts), accounts will use passwords that are unique to that system.

### **2.3.1.5 (L1) Configure 'Accounts: Rename administrator account' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

The built-in local administrator account is a well-known account name that attackers will target. It is recommended to choose another name for this account, and to avoid names that denote administrative or elevated access accounts. Be sure to also change the default description for the local administrator (through the Computer Management console).

#### **Rationale:**

The Administrator account exists on all computers that run the Windows 2000 or newer operating systems. If you rename this account, it is slightly more difficult for unauthorized persons to guess this privileged user name and password combination.

The built-in Administrator account cannot be locked out, regardless of how many times an attacker might use a bad password. This capability makes the Administrator account a popular target for brute force attacks that attempt to guess passwords. The value of this countermeasure is lessened because this account has a well-known SID, and there are third-party tools that allow authentication by using the SID rather than the account name. Therefore, even if you rename the Administrator account, an attacker could launch a brute force attack by using the SID to log on.

#### **Impact:**

You will have to inform users who are authorized to use this account of the new account name. (The guidance for this setting assumes that the Administrator account was not disabled, which was recommended earlier in this chapter.)

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPolicies\SecurityOptions:Accounts\_RenameAdministratorAccount\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following **Local Security Policy** location and confirm it is set to CISADMIN.

Computer Configuration\Policies\Windows Settings\Security Settings\Local Policies\Security Options\Accounts: Rename administrator account

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to CISADMIN:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/ Accounts_RenameAdministratorAccount
Data type:	String
Value:	CISADMIN

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Accounts* settings.

## **Default Value:**

Administrator.

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## 2.3.1.6 (L1) Configure 'Accounts: Rename guest account' (Automated)

### Profile Applicability:

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### Description:

The built-in local guest account is another well-known name to attackers. It is recommended to rename this account to something that does not indicate its purpose. Even if you disable this account, which is recommended, ensure that you rename it for added security.

### Rationale:

The Guest account exists on all computers that run the Windows 2000 or newer operating systems. If you rename this account, it is slightly more difficult for unauthorized persons to guess this privileged user name and password combination.

### Impact:

There should be little impact, because the Guest account is disabled by default.

### Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:Accounts\_RenameGuestAccount\_ProviderSet

### To confirm that the policy was properly applied to the system, check the following location:

Navigate to the following **Local Security Policy** location and confirm it is set to CISGUEST.

Computer Configuration\Policies\Windows Settings\Security Settings\Local Policies\Security Options\Accounts: Rename guest account

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to CISGUEST:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          Accounts_RenameGuestAccount
Data type: String
Value: CISGUEST
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Accounts* settings.

## **Default Value:**

Guest.

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.3.2 Audit**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

## **2.3.3 DCOM**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

## **2.3.4 Devices**

This section contains recommendations related to managing devices.

### *2.3.4.1 (L1) Ensure 'Devices: Allowed to format and eject removable media' is set to 'Administrators and Interactive Users' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting determines who is allowed to format and eject removable NTFS media. You can use this policy setting to prevent unauthorized users from removing data on one computer to access it on another computer on which they have local administrator privileges.

The recommended state for this setting is: Administrators and Interactive Users.

#### **Rationale:**

Users may be able to move data on removable disks to a different computer where they have administrative privileges. The user could then take ownership of any file, grant themselves full control, and view or modify any file. The fact that most removable storage devices will eject media by pressing a mechanical button diminishes the advantage of this policy setting.

#### **Impact:**

None - the default value is Administrators only. Administrators and Interactive Users will be able to format and eject removable NTFS media.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:Devices\_AllowedToFormatAndEjectRemovableMedia\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following **Local Security Policy** location and confirm it is set to Administrators and Interactive Users.

Computer Configuration\Policies\Windows Settings\Security Settings\Local Policies\Security Options\Devices: Allowed to format and eject removable media

*OR*

Navigate to the following registry location and confirm it is set to Administrators Interactive Users.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon:AllocateDASD

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators and Interactive Users:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/Devices_AllowedToFormatAndEjectRemovableMedia
Data type:	String
Value:	Administrators and Interactive Users

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note#2:** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Devices* settings.

## **Default Value:**

Administrators. (Only Administrators will be able to format and eject removable NTFS media.)

## **CIS Controls:**

Version 7

### **4.6 Use of Dedicated Machines For All Administrative Tasks**

Ensure administrators use a dedicated machine for all administrative tasks or tasks requiring administrative access. This machine will be segmented from the organization's

primary network and not be allowed Internet access. This machine will not be used for reading e-mail, composing documents, or browsing the Internet.

#### **8.4 Configure Anti-Malware Scanning of Removable Devices**

Configure devices so that they automatically conduct an anti-malware scan of removable media when inserted or connected.

#### **13.7 Manage USB Devices**

If USB storage devices are required, enterprise software should be used that can configure systems to allow the use of specific devices. An inventory of such devices should be maintained.

## *2.3.4.2 (L2) Ensure 'Devices: Prevent users from installing printer drivers' is set to 'Enabled' (Automated)*

### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

### **Description:**

For a computer to print to a shared printer, the driver for that shared printer must be installed on the local computer. This security setting determines who is allowed to install a printer driver as part of connecting to a shared printer.

The recommended state for this setting is: Enabled.

**Note:** This setting does not affect the ability to add a local printer. This setting does not affect Administrators.

### **Rationale:**

It may be appropriate in some organizations to allow users to install printer drivers on their own workstations. However, in a high security environment, you should allow only Administrators, not users, to do this, because printer driver installation may unintentionally cause the computer to become less stable. A malicious user could install inappropriate printer drivers in a deliberate attempt to damage the computer, or a user might accidentally install malicious software that masquerades as a printer driver. It is feasible for an attacker to disguise a Trojan horse program as a printer driver. The program may appear to users as if they must use it to print, but such a program could unleash malicious code on your computer network.

### **Impact:**

Only Administrators will be able to install a printer driver as part of connecting to a shared printer. The ability to add a local printer will not be affected.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Connectivity:DisableDownloadingOfPrintDriversOverHTTP_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\Connectivity:DisableDownloadingOfPrintDriversOverHTTP
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Print\Providers\LanManPrint_Services\Servers:AddPrinterDrivers
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to 'Enabled':

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI:
./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/Devices_Preve
ntUsersFromInstallingPrinterDriversWhenConnectingToSharedPrinters
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Devices* settings.

## **Default Value:**

Disabled. (Any user can install a printer driver as part of connecting to a shared printer.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

### ***2.3.5 Domain controller***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

### ***2.3.6 Domain member***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

## **2.3.7 Interactive logon**

This section contains recommendations related to interactive logons.

### **2.3.7.1 (L1) Ensure 'Interactive logon: Do not require CTRL+ALT+DEL' is set to 'Disabled' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting determines whether users must press CTRL+ALT+DEL before they log on.

The recommended state for this setting is: Disabled.

#### **Rationale:**

Microsoft developed this feature to make it easier for users with certain types of physical impairments to log on to computers that run Windows. If users are not required to press CTRL+ALT+DEL, they are susceptible to attacks that attempt to intercept their passwords. If CTRL+ALT+DEL is required before logon, user passwords are communicated by means of a trusted path.

An attacker could install a Trojan horse program that looks like the standard Windows logon dialog box and capture the user's password. The attacker would then be able to log on to the compromised account with whatever level of privilege that user has.

#### **Impact:**

Users must press CTRL+ALT+DEL before they log on to Windows unless they use a smart card for Windows logon. A smart card is a tamper-proof device that stores security information.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:InteractiveLogon_DoNotRequireCTRLALTDEL_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:InteractiveLogon_DoNotRequireCTRLALTDEL
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:DontDisplayLastUserName
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/ InteractiveLogon_DoNotRequireCTRLALTDEL
Data type:	Integer
Value:	0

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Interactive Logon* settings.

## **Default Value:**

On Windows 7 or older: Disabled.

On Windows 8.0 or newer: Enabled.

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## *2.3.7.2 (L1) Ensure 'Interactive logon: Don't display last signed-in' is set to 'Enabled' (Automated)*

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting determines whether the account name of the last user to log on to the client computers in your organization will be displayed in each computer's respective Windows logon screen. Enable this policy setting to prevent intruders from collecting account names visually from the screens of desktop or laptop computers in your organization.

The recommended state for this setting is: Enabled.

### **Rationale:**

An attacker with access to the console (for example, someone with physical access or someone who is able to connect to the server through Remote Desktop Services) could view the name of the last user who logged on to the server. The attacker could then try to guess the password, use a dictionary, or use a brute-force attack to try and log on.

### **Impact:**

The name of the last user to successfully log on will not be displayed in the Windows logon screen.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:InteractiveLogon_DoNotDisplayLastSignedIn_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:InteractiveLogon_DoNotDisplayLastSignedIn
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:DontDisplayLastUserName
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          InteractiveLogon_DoNotDisplayLastSignedIn
Data type: Integer
Value: 1
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (The name of the last user to log on is displayed in the Windows logon screen.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

### *2.3.7.3 (L1) Ensure 'Interactive logon: Machine inactivity limit' is set to '900 or fewer second(s), but not 0' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

Windows notices inactivity of a logon session, and if the amount of inactive time exceeds the inactivity limit, then the screen saver will run, locking the session.

The recommended state for this setting is: 900 or fewer second(s), but not 0.

**Note:** A value of 0 does not conform to the benchmark as it disables the machine inactivity limit.

#### **Rationale:**

If a user forgets to lock their computer when they walk away it's possible that a passerby will hijack it.

#### **Impact:**

The screen saver will automatically activate when the computer has been unattended for the amount of time specified. The impact should be minimal since the screen saver is enabled by default.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:InteractiveLogon_MachineInactivityLimit_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 900 or fewer seconds, but not 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:InteractiveLogon_MachineInactivityLimit
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 900 or fewer seconds, but not 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:InactivityTimeoutSecs
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to 900 or fewer second(s), but not 0:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/ InteractiveLogon_MachineInactivityLimit
Data type:	Integer
Value:	900 or fewer, but not 0

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

0 seconds. (There is no inactivity limit.)

## **CIS Controls:**

Version 7

### **16.11 Lock Workstation Sessions After Inactivity**

Automatically lock workstation sessions after a standard period of inactivity.

## *2.3.7.4 (L1) Configure 'Interactive logon: Message text for users attempting to log on' (Automated)*

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting specifies a text message that displays to users when they log on. Set the following group policy to a value that is consistent with the security and operational requirements of your organization.

### **Rationale:**

Displaying a warning message before logon may help prevent an attack by warning the attacker about the consequences of their misconduct before it happens. It may also help to reinforce corporate policy by notifying employees of the appropriate policy during the logon process. This text is often used for legal reasons—for example, to warn users about the ramifications of misusing company information or to warn them that their actions may be audited.

**Note:** Any warning that you display should first be approved by your organization's legal and human resources representatives.

### **Impact:**

Users will have to acknowledge a dialog box containing the configured text before they can log on to the computer.

**Note:** Windows Vista and Windows XP Professional support logon banners that can exceed 512 characters in length and that can also contain carriage-return line-feed sequences. However, Windows 2000-based clients cannot interpret and display these messages. You must use a Windows 2000-based computer to create a logon message policy that applies to Windows 2000-based computers.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:InteractiveLogon_MessageTextForUsersAttemptingToLogOn_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set as prescribed.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:InteractiveLogon_MessageTextForUsersAttemptingToLogOn
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set as prescribed.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:LegalNoticeText
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* as prescribed:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/ InteractiveLogon_MessageTextForUsersAttemptingToLogOn
Data type:	String
Value:	<Enter text>

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Interactive Logon* settings.

## **Default Value:**

No message.

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

### *2.3.7.5 (L1) Configure 'Interactive logon: Message title for users attempting to log on' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting specifies the text displayed in the title bar of the window that users see when they log on to the system. Configure this setting in a manner that is consistent with the security and operational requirements of your organization.

#### **Rationale:**

Displaying a warning message before logon may help prevent an attack by warning the attacker about the consequences of their misconduct before it happens. It may also help to reinforce corporate policy by notifying employees of the appropriate policy during the logon process.

#### **Impact:**

Users will have to acknowledge a dialog box with the configured title before they can log on to the computer.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:InteractiveLogon_MessageTitleForUsersAttemptingToLogOn_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set as prescribed.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:InteractiveLogon_MessageTitleForUsersAttemptingToLogOn
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set as prescribed.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:LegalNoticeCaption
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to as prescribed:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/ InteractiveLogon_MessageTitleForUsersAttemptingToLogOn
Data type:	String
Value:	<Enter text>

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Interactive Logon* settings.

## **Default Value:**

No message.

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.3.8 Microsoft network client**

This section contains recommendations related to configuring the Microsoft network client.

### *2.3.8.1 (L1) Ensure 'Microsoft network client: Digitally sign communications (always)' is set to 'Enabled' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting determines whether packet signing is required by the SMB client component.

**Note:** When Windows Vista-based computers have this policy setting enabled and they connect to file or print shares on remote servers, it is important that the setting is synchronized with its companion setting, **Microsoft network server: Digitally sign communications (always)**, on those servers. For more information about these settings, see the "Microsoft network client and server: Digitally sign communications (four related settings)" section in Chapter 5 of the Threats and Countermeasures guide.

The recommended state for this setting is: Enabled.

#### **Rationale:**

Session hijacking uses tools that allow attackers who have access to the same network as the client or server to interrupt, end, or steal a session in progress. Attackers can potentially intercept and modify unsigned SMB packets and then modify the traffic and forward it so that the server might perform undesirable actions. Alternatively, the attacker could pose as the server or client after legitimate authentication and gain unauthorized access to data.

SMB is the resource sharing protocol that is supported by many Windows operating systems. It is the basis of NetBIOS and many other protocols. SMB signatures authenticate both users and the servers that host the data. If either side fails the authentication process, data transmission will not take place.

**Impact:**

The Microsoft network client will not communicate with a Microsoft network server unless that server agrees to perform SMB packet signing.

The Windows 2000 Server, Windows 2000 Professional, Windows Server 2003, Windows XP Professional and Windows Vista implementations of the SMB file and print sharing protocol support mutual authentication, which prevents session hijacking attacks and supports message authentication to prevent man-in-the-middle attacks. SMB signing provides this authentication by placing a digital signature into each SMB, which is then verified by both the client and the server.

Implementation of SMB signing may negatively affect performance, because each packet needs to be signed and verified. If these settings are enabled on a server that is performing multiple roles, such as a small business server that is serving as a Domain Controller, file server, print server, and application server performance may be substantially slowed. Additionally, if you configure computers to ignore all unsigned SMB communications, older applications and operating systems will not be able to connect. However, if you completely disable all SMB signing, computers will be vulnerable to session hijacking attacks.

When SMB signing policies are enabled on Domain Controllers running Windows Server 2003 and member computers running Windows Vista SP1 or Windows Server 2008 group policy processing will fail. A hotfix is available from Microsoft that resolves this issue; see Microsoft Knowledge Base article 950876 for more details: [Group Policy settings are not applied on member computers that are running Windows Server 2008 or Windows Vista SP1 when certain SMB signing policies are enabled.](#)

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:MicrosoftNetworkClient_DigitallySignCommunicationsAlways_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:MicrosoftNetworkClient_DigitallySignCommunicationsAlways
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\LanmanWorkstation\Parameters:RequireSecuritySignature
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/ MicrosoftNetworkClient_DigitallySignCommunicationsAlways
Data type:	Integer
Value:	1

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Microsoft Network Client* settings.

## **Default Value:**

Disabled. (SMB packet signing is negotiated between the client and server.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## *2.3.8.2 (L1) Ensure 'Microsoft network client: Digitally sign communications (if server agrees)' is set to 'Enabled' (Automated)*

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting determines whether the SMB client will attempt to negotiate SMB packet signing.

**Note:** Enabling this policy setting on SMB clients on your network makes them fully effective for packet signing with all clients and servers in your environment.

The recommended state for this setting is: Enabled.

### **Rationale:**

Session hijacking uses tools that allow attackers who have access to the same network as the client or server to interrupt, end, or steal a session in progress. Attackers can potentially intercept and modify unsigned SMB packets and then modify the traffic and forward it so that the server might perform undesirable actions. Alternatively, the attacker could pose as the server or client after legitimate authentication and gain unauthorized access to data.

SMB is the resource sharing protocol that is supported by many Windows operating systems. It is the basis of NetBIOS and many other protocols. SMB signatures authenticate both users and the servers that host the data. If either side fails the authentication process, data transmission will not take place.

**Impact:**

None - this is the default behavior.

The Windows 2000 Server, Windows 2000 Professional, Windows Server 2003, Windows XP Professional and Windows Vista implementations of the SMB file and print sharing protocol support mutual authentication, which prevents session hijacking attacks and supports message authentication to prevent man-in-the-middle attacks. SMB signing provides this authentication by placing a digital signature into each SMB, which is then verified by both the client and the server.

Implementation of SMB signing may negatively affect performance, because each packet needs to be signed and verified. If these settings are enabled on a server that is performing multiple roles, such as a small business server that is serving as a Domain Controller, file server, print server, and application server performance may be substantially slowed. Additionally, if you configure computers to ignore all unsigned SMB communications, older applications and operating systems will not be able to connect. However, if you completely disable all SMB signing, computers will be vulnerable to session hijacking attacks.

When SMB signing policies are enabled on Domain Controllers running Windows Server 2003 and member computers running Windows Vista SP1 or Windows Server 2008 group policy processing will fail. A hotfix is available from Microsoft that resolves this issue; see Microsoft Knowledge Base article 950876 for more details: [Group Policy settings are not applied on member computers that are running Windows Server 2008 or Windows Vista SP1 when certain SMB signing policies are enabled.](#)

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:MicrosoftNetworkClient_DigitallySignCommunicationsIfServerAgrees_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:MicrosoftNetworkClient_DigitallySignCommunicationsIfServerAgrees
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\LanmanWorkstation\Parameters:EnableSecuritySignature
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          MicrosoftNetworkClient_DigitallySignCommunicationsIfServerAgrees
Data type: Integer
Value: 1
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Microsoft Network Client* settings.

## **Default Value:**

Enabled. (The Microsoft network client will ask the server to perform SMB packet signing upon session setup. If packet signing has been enabled on the server, packet signing will be negotiated.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**2.3.8.3 (L1) Ensure 'Microsoft network client: Send unencrypted password to third-party SMB servers' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting determines whether the SMB redirector will send plaintext passwords during authentication to third-party SMB servers that do not support password encryption.

It is recommended that you disable this policy setting unless there is a strong business case to enable it. If this policy setting is enabled, unencrypted passwords will be allowed across the network.

The recommended state for this setting is: Disabled.

**Rationale:**

If you enable this policy setting, the server can transmit passwords in plaintext across the network to other computers that offer SMB services, which is a significant security risk. These other computers may not use any of the SMB security mechanisms that are included with Windows Server 2003.

**Impact:**

None - this is the default behavior.

Some very old applications and operating systems such as MS-DOS, Windows for Workgroups 3.11, and Windows 95a may not be able to communicate with the servers in your organization by means of the SMB protocol.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:MicrosoftNetworkClient_SendUnencryptedPasswordToThirdPartySMBServers_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:MicrosoftNetworkClient_SendUnencryptedPasswordToThirdPartySMBServers
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\LanmanWorkstation\Parameters:EnablePlainTextPassword
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          MicrosoftNetworkClient_SendUnencryptedPasswordToThirdPartySMBServers
Data type: Integer
Value: 0
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Microsoft Network Client* settings.

## **Default Value:**

Disabled. (Plaintext passwords will not be sent during authentication to third-party SMB servers that do not support password encryption.)

## **CIS Controls:**

Version 7

### **16.4 Encrypt or Hash all Authentication Credentials**

Encrypt or hash with a salt all authentication credentials when stored.

## **2.3.9 Microsoft network server**

This section contains recommendations related to configuring the Microsoft network server.

### ***2.3.9.1 (L1) Ensure 'Microsoft network server: Digitally sign communications (always)' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting determines whether packet signing is required by the SMB server component. Enable this policy setting in a mixed environment to prevent downstream clients from using the workstation as a network server.

The recommended state for this setting is: Enabled.

#### **Rationale:**

Session hijacking uses tools that allow attackers who have access to the same network as the client or server to interrupt, end, or steal a session in progress. Attackers can potentially intercept and modify unsigned SMB packets and then modify the traffic and forward it so that the server might perform undesirable actions. Alternatively, the attacker could pose as the server or client after legitimate authentication and gain unauthorized access to data.

SMB is the resource sharing protocol that is supported by many Windows operating systems. It is the basis of NetBIOS and many other protocols. SMB signatures authenticate both users and the servers that host the data. If either side fails the authentication process, data transmission will not take place.

**Impact:**

The Microsoft network server will not communicate with a Microsoft network client unless that client agrees to perform SMB packet signing.

The Windows 2000 Server, Windows 2000 Professional, Windows Server 2003, Windows XP Professional and Windows Vista implementations of the SMB file and print sharing protocol support mutual authentication, which prevents session hijacking attacks and supports message authentication to prevent man-in-the-middle attacks. SMB signing provides this authentication by placing a digital signature into each SMB, which is then verified by both the client and the server.

Implementation of SMB signing may negatively affect performance, because each packet needs to be signed and verified. If these settings are enabled on a server that is performing multiple roles, such as a small business server that is serving as a Domain Controller, file server, print server, and application server performance may be substantially slowed. Additionally, if you configure computers to ignore all unsigned SMB communications, older applications and operating systems will not be able to connect. However, if you completely disable all SMB signing, computers will be vulnerable to session hijacking attacks.

When SMB signing policies are enabled on Domain Controllers running Windows Server 2003 and member computers running Windows Vista SP1 or Windows Server 2008 group policy processing will fail. A hotfix is available from Microsoft that resolves this issue; see Microsoft Knowledge Base article 950876 for more details: [Group Policy settings are not applied on member computers that are running Windows Server 2008 or Windows Vista SP1 when certain SMB signing policies are enabled.](#)

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:MicrosoftNetworkServer_DigitallySignCommunicationsAlways_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:MicrosoftNetworkServer_DigitallySignCommunicationsAlways
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\LanManServer\Parameters:RequireSecuritySignature
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/ MicrosoftNetworkServer_DigitallySignCommunicationsAlways
Data type:	Integer
Value:	1

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Microsoft Network Server* settings.

## **Default Value:**

Disabled. (SMB packet signing is negotiated between the client and server.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## *2.3.9.2 (L1) Ensure 'Microsoft network server: Digitally sign communications (if client agrees)' is set to 'Enabled' (Automated)*

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting determines whether the SMB server will negotiate SMB packet signing with clients that request it. If no signing request comes from the client, a connection will be allowed without a signature if the **Microsoft network server: Digitally sign communications (always)** setting is not enabled.

**Note:** Enable this policy setting on SMB clients on your network to make them fully effective for packet signing with all clients and servers in your environment.

The recommended state for this setting is: Enabled.

### **Rationale:**

Session hijacking uses tools that allow attackers who have access to the same network as the client or server to interrupt, end, or steal a session in progress. Attackers can potentially intercept and modify unsigned SMB packets and then modify the traffic and forward it so that the server might perform undesirable actions. Alternatively, the attacker could pose as the server or client after legitimate authentication and gain unauthorized access to data.

SMB is the resource sharing protocol that is supported by many Windows operating systems. It is the basis of NetBIOS and many other protocols. SMB signatures authenticate both users and the servers that host the data. If either side fails the authentication process, data transmission will not take place.

### **Impact:**

The Microsoft network server will negotiate SMB packet signing as requested by the client. That is, if packet signing has been enabled on the client, packet signing will be negotiated.

The Windows 2000 Server, Windows 2000 Professional, Windows Server 2003, Windows XP Professional and Windows Vista implementations of the SMB file and print sharing protocol support mutual authentication, which prevents session hijacking attacks and supports message authentication to prevent man-in-the-middle attacks. SMB signing provides this authentication by placing a digital signature into each SMB, which is then verified by both the client and the server.

Implementation of SMB signing may negatively affect performance, because each packet needs to be signed and verified. If these settings are enabled on a server that is performing multiple roles, such as a small business server that is serving as a Domain Controller, file server, print server, and application server performance may be substantially slowed. Additionally, if you configure computers to ignore all unsigned SMB communications, older applications and operating systems will not be able to connect. However, if you completely disable all SMB signing, computers will be vulnerable to session hijacking attacks.

When SMB signing policies are enabled on Domain Controllers running Windows Server 2003 and member computers running Windows Vista SP1 or Windows Server 2008 group policy processing will fail. A hotfix is available from Microsoft that resolves this issue; see Microsoft Knowledge Base article 950876 for more details: [Group Policy settings are not applied on member computers that are running Windows Server 2008 or Windows Vista SP1 when certain SMB signing policies are enabled.](#)

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:MicrosoftNetworkServer_DigitallySignCommunicationsIfClientAgrees_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:MicrosoftNetworkServer_DigitallySignCommunicationsIfClientAgrees
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\LanManServer\Parameters:EnableSecuritySignature
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          MicrosoftNetworkServer_DigitallySignCommunications
          IfClientAgrees
Data type: Integer
Value: 1
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Microsoft Network Server* settings.

## **Default Value:**

Disabled. (The SMB client will never negotiate SMB packet signing.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.3.10 Network access**

This section contains recommendations related to network access.

### *2.3.10.1 (L1) Ensure 'Network access: Do not allow anonymous enumeration of SAM accounts' is set to 'Enabled' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting controls the ability of anonymous users to enumerate the accounts in the Security Accounts Manager (SAM). If you enable this policy setting, users with anonymous connections will not be able to enumerate domain account user names on the systems in your environment. This policy setting also allows additional restrictions on anonymous connections.

The recommended state for this setting is: Enabled.

**Note:** This policy has no effect on Domain Controllers.

#### **Rationale:**

An unauthorized user could anonymously list account names and use the information to attempt to guess passwords or perform social engineering attacks. (Social engineering attacks try to deceive users in some way to obtain passwords or some form of security information.)

#### **Impact:**

None - this is the default behavior. It will be impossible to establish trusts with Windows NT 4.0-based domains. Also, client computers that run older versions of the Windows operating system such as Windows NT 3.51 and Windows 95 will experience problems when they try to use resources on the server.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:NetworkAccess_DoNotAllowAnonymousEnumerationOfSAMAccounts_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:NetworkAccess_DoNotAllowAnonymousEnumerationOfSAMAccounts
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Lsa:RestrictAnonymousSAM
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          NetworkAccess_DoNotAllowAnonymousEnumerationOfSAMAccounts
Data type: Integer
Value: 1
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Network access and security* settings.

## **Default Value:**

Enabled. (Do not allow anonymous enumeration of SAM accounts. This option replaces Everyone with Authenticated Users in the security permissions for resources.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**2.3.10.2 (L1) Ensure 'Network access: Do not allow anonymous enumeration of SAM accounts and shares' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting controls the ability of anonymous users to enumerate SAM accounts as well as shares. If you enable this policy setting, anonymous users will not be able to enumerate domain account user names and network share names on the systems in your environment.

The recommended state for this setting is: Enabled.

**Note:** This policy has no effect on Domain Controllers.

**Rationale:**

An unauthorized user could anonymously list account names and shared resources and use the information to attempt to guess passwords or perform social engineering attacks. (Social engineering attacks try to deceive users in some way to obtain passwords or some form of security information.)

**Impact:**

It will be impossible to establish trusts with Windows NT 4.0-based domains. Also, client computers that run older versions of the Windows operating system such as Windows NT 3.51 and Windows 95 will experience problems when they try to use resources on the server. Users who access file and print servers anonymously will be unable to list the shared network resources on those servers; the users will have to authenticate before they can view the lists of shared folders and printers. However, even with this policy setting enabled, anonymous users will have access to resources with permissions that explicitly include the built-in group, ANONYMOUS LOGON.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:NetworkAccess_DoNotAllowAnonymousEnumerationOfSAMAccountsAndShares_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:NetworkAccess_DoNotAllowAnonymousEnumerationOfSAMAccountsAndShares
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Lsa:RestrictAnonymous
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
NetworkAccess_DoNotAllowAnonymousEnumerationOfSAMAccountsAndShares
Data type: Integer
Value: 1
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Network access and security* settings.

## **Default Value:**

Disabled. (Allow anonymous enumeration of SAM accounts and shares. No additional permissions can be assigned by the administrator for anonymous connections to the computer. Anonymous connections will rely on default permissions.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**2.3.10.3 (L1) Ensure 'Network access: Restrict anonymous access to Named Pipes and Shares' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

When enabled, this policy setting restricts anonymous access to only those shares and pipes that are named in the Network access: Named pipes that can be accessed anonymously and Network access: Shares that can be accessed anonymously settings. This policy setting controls null session access to shares on your computers by adding `RestrictNullSessAccess` with the value 1 in the

`HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\LanManServer\Parameters`

registry key. This registry value toggles null session shares on or off to control whether the server service restricts unauthenticated clients' access to named resources.

The recommended state for this setting is: Enabled.

**Rationale:**

Null sessions are a weakness that can be exploited through shares (including the default shares) on computers in your environment.

**Impact:**

None - this is the default behavior. If you choose to enable this setting and are supporting Windows NT 4.0 domains, you should check if any of the named pipes are required to maintain trust relationships between the domains, and then add the pipe to the **Network access: Named pipes that can be accessed anonymously** list:

- COMNAP: SNA session access
- COMNODE: SNA session access
- SQL\QUERY: SQL instance access
- SPOOLSS: Spooler service
- LLSRPC: License Logging service
- NETLOGON: Net Logon service
- LSARPC: LSA access
- SAMR: Remote access to SAM objects
- BROWSER: Computer Browser service

Previous to the release of Windows Server 2003 with Service Pack 1 (SP1) these named pipes were allowed anonymous access by default, but with the increased hardening in Windows Server 2003 with SP1 these pipes must be explicitly added if needed.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:NetworkAccess_RestrictAnonymousAccessToNamedPipesAndShares_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:NetworkAccess_RestrictAnonymousAccessToNamedPipesAndShares
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\LanManServer\Parameters:RestrictNullSessAccess
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
NetworkAccess_RestrictAnonymousAccessToNamedPipesAndShares
Data type: Integer
Value: 1
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Network access and security settings*.

## **Default Value:**

Enabled. (Anonymous access is restricted to shares and pipes listed in the Network access: Named pipes that can be accessed anonymously and Network access: Shares that can be accessed anonymously settings.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**2.3.10.4 (L1) Ensure 'Network access: Restrict clients allowed to make remote calls to SAM' is set to 'Administrators: Remote Access: Allow' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting allows you to restrict remote RPC connections to SAM.

The recommended state for this setting is: Administrators : Remote Access : Allow.

**Note:** A Windows 10 R1607, Server 2016 or newer OS is required to access and set this value in Group Policy.

**Rationale:**

To ensure that an unauthorized user cannot anonymously list local account names or groups and use the information to attempt to guess passwords or perform social engineering attacks. (Social engineering attacks try to deceive users in some way to obtain passwords or some form of security information.)

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:NetworkAccess_RestrictClientsAllowedToMakeRemoteCallsToSAM_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to  
O:BAG:BAD:(A;;RC;;;BA).

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:NetworkAccess_RestrictClientsAllowedToMakeRemoteCallsToSAM
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to  
O:BAG:BAD:(A;;RC;;;BA).

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Lsa:RestrictRemoteSAM
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Administrators: Remote Access: Allow:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          NetworkAccess_RestrictClientsAllowedToMakeRemoteCallsToSAM
Data type: String
Value: O:BAG:BAD:(A;;RC;;;BA)
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Network access and security* settings.

## **Default Value:**

Administrators: Remote Access: Allow.

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

### **2.3.10.5 (L1) Ensure 'Network access: Shares that can be accessed anonymously' is set to 'None' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting determines which network shares can be accessed by anonymous users. The default configuration for this policy setting has little effect because all users have to be authenticated before they can access shared resources on the server.

The recommended state for this setting is: <blank> (i.e. None).

#### **Rationale:**

It is very dangerous to allow any values in this setting. Any shares that are listed can be accessed by any network user, which could lead to the exposure or corruption of sensitive data.

#### **Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:NetworkAccess_RestrictAnonymousAccessToNamedPipesAndShares_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\LocalPoliciesSecurityOptions:NetworkAccess_RestrictAnonymousAccessToNamedPipesAndShares
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to <blank> (i.e. None):

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          NetworkAccess_RestrictAnonymousAccessToNamedPipesAndShares
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

None. (Only authenticated users will have access to all shared resources on the server.)

## **CIS Controls:**

Version 7

### **14.6 Protect Information through Access Control Lists**

Protect all information stored on systems with file system, network share, claims, application, or database specific access control lists. These controls will enforce the principle that only authorized individuals should have access to the information based on their need to access the information as a part of their responsibilities.

## **2.3.11 Network security**

This section contains recommendations related to network security.

### ***2.3.11.1 (L1) Ensure 'Network security: Allow Local System to use computer identity for NTLM' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting determines whether Local System services that use Negotiate when reverting to NTLM authentication can use the computer identity. This policy is supported on at least Windows 7 or Windows Server 2008 R2.

The recommended state for this setting is: Enabled.

#### **Rationale:**

When connecting to computers running versions of Windows earlier than Windows Vista or Windows Server 2008 (non-R2), services running as Local System and using SPNEGO (Negotiate) that revert to NTLM use the computer identity. In Windows 7, if you are connecting to a computer running Windows Server 2008 or Windows Vista, then a system service uses either the computer identity or a NULL session. When connecting with a NULL session, a system-generated session key is created, which provides no protection but allows applications to sign and encrypt data without errors. When connecting with the computer identity, both signing and encryption is supported in order to provide data protection.

#### **Impact:**

Services running as Local System that use Negotiate when reverting to NTLM authentication will use the computer identity. This might cause some authentication requests between Windows operating systems to fail and log an error.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:NetworkSecurity.AllowLocalSystemToUseComputerIdentityForNTLM_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:NetworkSecurity.AllowLocalSystemToUseComputerIdentityForNTLM
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Lsa:UseMachineId
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/ NetworkSecurity_AllowLocalSystemToUseComputerIdentityForNTLM
Data type:	Integer
Value:	1

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Services running as Local System that use Negotiate when reverting to NTLM authentication will authenticate anonymously.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**2.3.11.2 (L1) Ensure 'Network Security: Allow PKU2U authentication requests to this computer to use online identities' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This setting determines if online identities are able to authenticate to this computer.

The Public Key Cryptography Based User-to-User (PKU2U) protocol introduced in Windows 7 and Windows Server 2008 R2 is implemented as a security support provider (SSP). The SSP enables peer-to-peer authentication, particularly through the Windows 7 media and file sharing feature called HomeGroup, which permits sharing between computers that are not members of a domain.

With PKU2U, a new extension was introduced to the Negotiate authentication package, `Spnego.dll`. In previous versions of Windows, Negotiate decided whether to use Kerberos or NTLM for authentication. The extension SSP for Negotiate, `Negoexts.dll`, which is treated as an authentication protocol by Windows, supports Microsoft SSPs including PKU2U.

When computers are configured to accept authentication requests by using online IDs, `Negoexts.dll` calls the PKU2U SSP on the computer that is used to log on. The PKU2U SSP obtains a local certificate and exchanges the policy between the peer computers. When validated on the peer computer, the certificate within the metadata is sent to the logon peer for validation and associates the user's certificate to a security token and the logon process completes.

The recommended state for this setting is: Disabled.

**Rationale:**

The PKU2U protocol is a peer-to-peer authentication protocol - authentication should be managed centrally in most managed networks.

**Impact:**

None - this is the default configuration for domain-joined computers.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:NetworkSecurity.AllowPKU2UAuthenticationRequests_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:NetworkSecurity.AllowPKU2UAuthenticationRequests
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Lsa\pku2u:AllowOnlineID
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          NetworkSecurity_AllowPKU2UAuthenticationRequests
Data type: Integer
Value: 0
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Network access and security* settings.

## **Default Value:**

Disabled. (Online identities will not be allowed to authenticate to a domain-joined machine.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

### **2.3.11.3 (L1) Ensure 'Network security: Do not store LAN Manager hash value on next password change' is set to 'Enabled' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting determines whether the LAN Manager (LM) hash value for the new password is stored when the password is changed. The LM hash is relatively weak and prone to attack compared to the cryptographically stronger Microsoft Windows NT hash. Since LM hashes are stored on the local computer in the security database, passwords can then be easily compromised if the database is attacked.

**Note:** Older operating systems and some third-party applications may fail when this policy setting is enabled. Also, note that the password will need to be changed on all accounts after you enable this setting to gain the proper benefit.

The recommended state for this setting is: Enabled.

#### **Rationale:**

The SAM file can be targeted by attackers who seek access to username and password hashes. Such attacks use special tools to crack passwords, which can then be used to impersonate users and gain access to resources on your network. These types of attacks will not be prevented if you enable this policy setting, but it will be much more difficult for these types of attacks to succeed.

#### **Impact:**

None - this is the default behavior. Earlier operating systems such as Windows 95, Windows 98, and Windows ME as well as some third-party applications will fail.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:NetworkSecurity_DoNotStoreLANManagerHashValueOnNextPasswordChange_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:NetworkSecurity_DoNotStoreLANManagerHashValueOnNextPasswordChange
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Lsa:NoLMHash
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          NetworkSecurity_DoNotStoreLANManagerHashValueOnNextPassword
          Change
Data type: Integer
Value: 1
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Network access and security* settings.

## **Default Value:**

Enabled. (LAN Manager hash values are not stored when passwords are changed.)

## **CIS Controls:**

Version 7

### **16.4 Encrypt or Hash all Authentication Credentials**

Encrypt or hash with a salt all authentication credentials when stored.

**2.3.11.4 (L1) Ensure 'Network security: LAN Manager authentication level' is set to 'Send NTLMv2 response only. Refuse LM & NTLM' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

LAN Manager (LM) was a family of early Microsoft client/server software (predating Windows NT) that allowed users to link personal computers together on a single network. LM network capabilities included transparent file and print sharing, user security features, and network administration tools. In Active Directory domains, the Kerberos protocol is the default authentication protocol. However, if the Kerberos protocol is not negotiated for some reason, Active Directory will use LM, NTLM, or NTLMv2. LAN Manager authentication includes the LM, NTLM, and NTLM version 2 (NTLMv2) variants, and is the protocol that is used to authenticate all Windows clients when they perform the following operations:

- Join a domain
- Authenticate between Active Directory forests
- Authenticate to down-level domains
- Authenticate to computers that do not run Windows 2000, Windows Server 2003, or Windows XP
- Authenticate to computers that are not in the domain

The Network security: LAN Manager authentication level setting determines which challenge/response authentication protocol is used for network logons. This choice affects the level of authentication protocol used by clients, the level of session security negotiated, and the level of authentication accepted by servers.

The recommended state for this setting is: Send NTLMv2 response only. Refuse LM & NTLM.

**Rationale:**

Windows 2000 and Windows XP clients were configured by default to send LM and NTLM authentication responses (Windows 95-based and Windows 98-based clients only send LM). The default settings in OSes predating Windows Vista / Windows Server 2008 (non-R2) allowed all clients to authenticate with servers and use their resources. However, this meant that LM responses - the weakest form of authentication response - were sent over the network, and it was potentially possible for attackers to sniff that traffic to more easily reproduce the user's password.

The Windows 95, Windows 98, and Windows NT operating systems cannot use the Kerberos version 5 protocol for authentication. For this reason, in a Windows Server 2003 domain, these computers authenticate by default with both the LM and NTLM protocols for network authentication. You can enforce a more secure authentication protocol for Windows 95, Windows 98, and Windows NT by using NTLMv2. For the logon process, NTLMv2 uses a secure channel to protect the authentication process. Even if you use NTLMv2 for older clients and servers, Windows-based clients and servers that are members of the domain will use the Kerberos authentication protocol to authenticate with Windows Server 2003 or newer Domain Controllers. For these reasons, it is strongly preferred to restrict the use of LM & NTLM (non-v2) as much as possible.

**Impact:**

Clients use NTLMv2 authentication only and use NTLMv2 session security if the server supports it; Domain Controllers refuse LM and NTLM (accept only NTLMv2 authentication). Clients that do not support NTLMv2 authentication will not be able to authenticate in the domain and access domain resources by using LM and NTLM.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:NetworkSecurity_LANManagerAuthenticationLevel_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 5.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:NetworkSecurity_LANManagerAuthenticationLevel
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 5.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Lsa:ImCompatibilityLevel
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Send NTLMv2 response only. Refuse LM & NTLM:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name:      <Enter name>
Description: <Enter Description>
OMA-URI:    ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
            NetworkSecurity_LANManagerAuthenticationLevel
Data type:  Integer
Value:      5
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Network access and security* settings.

## **Default Value:**

Send NTLMv2 response only. (Clients use NTLMv2 authentication only and use NTLMv2 session security if the server supports it; Domain Controllers accept LM, NTLM & NTLMv2 authentication.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

**2.3.11.5 (L1) Ensure 'Network security: Minimum session security for NTLM SSP based (including secure RPC) clients' is set to 'Require NTLMv2 session security, Require 128-bit encryption' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting determines which behaviors are allowed by clients for applications using the NTLM Security Support Provider (SSP). The SSP Interface (SSPI) is used by applications that need authentication services. The setting does not modify how the authentication sequence works but instead require certain behaviors in applications that use the SSPI.

The recommended state for this setting is: `Require NTLMv2 session security, Require 128-bit encryption`.

**Note:** These values are dependent on the *Network security: LAN Manager Authentication Level* (Rule 2.3.11.7) security setting value.

**Rationale:**

You can enable both options for this policy setting to help protect network traffic that uses the NTLM Security Support Provider (NTLM SSP) from being exposed or tampered with by an attacker who has gained access to the same network. In other words, these options help protect against man-in-the-middle attacks.

**Impact:**

NTLM connections will fail if NTLMv2 protocol and strong encryption (128-bit) are not **both** negotiated. Client applications that are enforcing these settings will be unable to communicate with older servers that do not support them. This setting could impact Windows Clustering when applied to servers running Windows Server 2003, see Microsoft Knowledge Base article 890761: [You receive an "Error 0x8007042b" error message when you add or join a node to a cluster if you use NTLM version 2 in Windows Server 2003](#) for more information on possible issues and how to resolve them.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:NetworkSecurity_MinimumSessionSecurityForNTLMSSPBasedClients_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 537395200.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:NetworkSecurity_MinimumSessionSecurityForNTLMSSPBasedClients
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 537395200.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\Lsa\MSV1_0:NTLMMinClientssec
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Require NTLMv2 session security, Require 128-bit encryption:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/NetworkSecurity_MinimumSessionSecurityForNTLMSSPBasedClients
Data type:	Integer
Value:	537395200

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/Network access and security* settings.

## **Default Value:**

Require 128-bit encryption. (NTLM connections will fail if strong encryption (128-bit) is not negotiated.)

## **CIS Controls:**

Version 7

### **12.5 Configure Monitoring Systems to Record Network Packets**

Configure monitoring systems to record network packets passing through the boundary at each of the organization's network boundaries.

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

## **2.3.17 User Account Control**

This section contains recommendations related to User Account Control.

### ***2.3.17.1 (L1) Ensure 'User Account Control: Admin Approval Mode for the Built-in Administrator account' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting controls the behavior of Admin Approval Mode for the built-in Administrator account.

The recommended state for this setting is: Enabled.

#### **Rationale:**

One of the risks that the User Account Control feature introduced with Windows Vista is trying to mitigate is that of malicious software running under elevated credentials without the user or administrator being aware of its activity. An attack vector for these programs was to discover the password of the account named "Administrator" because that user account was created for all installations of Windows. To address this risk, in Windows Vista and newer, the built-in Administrator account is now disabled by default. In a default installation of a new computer, accounts with administrative control over the computer are initially set up in one of two ways:

- If the computer is not joined to a domain, the first user account you create has the equivalent permissions as a local administrator.
- If the computer is joined to a domain, no local administrator accounts are created. The Enterprise or Domain Administrator must log on to the computer and create one if a local administrator account is warranted.

Once Windows is installed, the built-in Administrator account may be manually enabled, but we strongly recommend that this account remain disabled.

## **Impact:**

The built-in Administrator account uses Admin Approval Mode. Users that log on using the local Administrator account will be prompted for consent whenever a program requests an elevation in privilege, just like any other user would.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:UserAccountControl\_UseAdminApprovalMode\_ProviderSet

### **To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:UserAccountControl\_UseAdminApprovalMode

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:FilterAdministratorToken

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/ UserAccountControl_UseAdminApprovalMode
Data type:	Integer
Value:	1

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/User account control* settings.

## **Default Value:**

Disabled. (The built-in Administrator account runs all applications with full administrative privilege.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**2.3.17.2 (L1) Ensure 'User Account Control: Behavior of the elevation prompt for administrators in Admin Approval Mode' is set to 'Prompt for consent on the secure desktop' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting controls the behavior of the elevation prompt for administrators.

The recommended state for this setting is: Prompt for consent on the secure desktop.

**Rationale:**

One of the risks that the UAC feature introduced with Windows Vista is trying to mitigate is that of malicious software running under elevated credentials without the user or administrator being aware of its activity. This setting raises awareness to the administrator of elevated privilege operations and permits the administrator to prevent a malicious program from elevating its privilege when the program attempts to do so.

**Impact:**

When an operation (including execution of a Windows binary) requires elevation of privilege, the user is prompted on the secure desktop to select either Permit or Deny. If the user selects Permit, the operation continues with the user's highest available privilege.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:UserAccountControl_BehaviorOfTheElevationPromptForAdministrators_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 2.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:UserAccountControl_BehaviorOfTheElevationPromptForAdministrators
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 2.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:ConsentPromptBehaviorAdmin
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Prompt for consent on the secure desktop:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          UserAccountControl_BehaviorOfTheElevationPromptFor
          Administrators
Data type: Integer
Value: 2
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/User account control* settings.

## **Default Value:**

Prompt for consent for non-Windows binaries. (When an operation for a non-Microsoft application requires elevation of privilege, the user is prompted on the secure desktop to select either Permit or Deny. If the user selects Permit, the operation continues with the user's highest available privilege.)

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

### **2.3.17.3 (L1) Ensure 'User Account Control: Behavior of the elevation prompt for standard users' is set to 'Automatically deny elevation requests' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting controls the behavior of the elevation prompt for standard users.

The recommended state for this setting is: Automatically deny elevation requests.

#### **Rationale:**

One of the risks that the User Account Control feature introduced with Windows Vista is trying to mitigate is that of malicious programs running under elevated credentials without the user or administrator being aware of their activity. This setting raises awareness to the user that a program requires the use of elevated privilege operations and requires that the user be able to supply administrative credentials in order for the program to run.

#### **Impact:**

When an operation requires elevation of privilege, a configurable access denied error message is displayed. An enterprise that is running desktops as standard user may choose this setting to reduce help desk calls.

**Note:** With this setting configured as recommended, the default error message displayed when a user attempts to perform an operation or run a program requiring privilege elevation (without Administrator rights) is "*This program will not run. This program is blocked by group policy. For more information, contact your system administrator.*" Some users who are not used to seeing this message may believe that the operation or program they attempted to run is specifically blocked by group policy, as that is what the message seems to imply. This message may therefore result in user questions as to why that specific operation/program is blocked, when in fact, the problem is that they need to perform the operation or run the program with an Administrative account (or "Run as Administrator" if it is already an Administrator account), and they are not doing that.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:UserAccountControl_BehaviorOfTheElevationPromptForStandardUsers_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:UserAccountControl_BehaviorOfTheElevationPromptForStandardUsers
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:ConsentPromptBehaviorUser
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Automatically deny elevation requests:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          UserAccountControl_BehaviorOfTheElevationPromptFor
          StandardUsers
Data type: Integer
Value: 0
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/User account control* settings.

## **Default Value:**

Prompt for credentials. (When an operation requires elevation of privilege, the user is prompted to enter an administrative user name and password. If the user enters valid credentials, the operation continues with the applicable privilege.)

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**2.3.17.4 (L1) Ensure 'User Account Control: Detect application installations and prompt for elevation' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting controls the behavior of application installation detection for the computer.

The recommended state for this setting is: Enabled.

**Rationale:**

Some malicious software will attempt to install itself after being given permission to run. For example, malicious software with a trusted application shell. The user may have given permission for the program to run because the program is trusted, but if they are then prompted for installation of an unknown component this provides another way of trapping the software before it can do damage

**Impact:**

When an application installation package is detected that requires elevation of privilege, the user is prompted to enter an administrative user name and password. If the user enters valid credentials, the operation continues with the applicable privilege.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:UserAccountControl_DetectApplicationInstallationsAndPromptForElevation_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:UserAccountControl_DetectApplicationInstallationsAndPromptForElevation
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:EnableInstallerDetection
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          UserAccountControl_DetectApplicationInstallationsA
          ndPromptForElevation
Data type: Integer
Value: 1
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/User account control* settings.

## **Default Value:**

Disabled. (Default for enterprise. Application installation packages are not detected and prompted for elevation.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **2.3.17.5 (L1) Ensure 'User Account Control: Only elevate UIAccess applications that are installed in secure locations' is set to 'Enabled' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting controls whether applications that request to run with a User Interface Accessibility (UIAccess) integrity level must reside in a secure location in the file system. Secure locations are limited to the following:

- ... \Program Files\, including subfolders
- ... \Windows\System32\
- ... \Program Files (x86)\, including subfolders (for 64-bit versions of Windows)

**Note:** Windows enforces a public key infrastructure (PKI) signature check on any interactive application that requests to run with a UIAccess integrity level regardless of the state of this security setting.

The recommended state for this setting is: Enabled.

### **Rationale:**

UIAccess Integrity allows an application to bypass User Interface Privilege Isolation (UIPI) restrictions when an application is elevated in privilege from a standard user to an administrator. This is required to support accessibility features such as screen readers that are transmitting user interfaces to alternative forms. A process that is started with UIAccess rights has the following abilities:

- To set the foreground window.
- To drive any application window using SendInput function.
- To use read input for all integrity levels using low-level hooks, raw input, GetKeyState, GetAsyncKeyState, and GetKeyboardInput.
- To set journal hooks.
- To use AttachThreadInput to attach a thread to a higher integrity input queue.

**Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:UserAccountControl_OnlyElevateUIAccessApplicationsThatAreInstalledInSecureLocations_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:UserAccountControl_OnlyElevateUIAccessApplicationsThatAreInstalledInSecureLocations
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:EnableSecureUIAPaths
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          UserAccountControl_OnlyElevateUIAccessApplications
          ThatAreInstalledInSecureLocations
Data type: Integer
Value: 1
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/User account control* settings.

## **Default Value:**

Enabled. (If an application resides in a secure location in the file system, it runs only with UIAccess integrity.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

### *2.3.17.6 (L1) Ensure 'User Account Control: Run all administrators in Admin Approval Mode' is set to 'Enabled' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting controls the behavior of all User Account Control (UAC) policy settings for the computer. If you change this policy setting, you must restart your computer.

The recommended state for this setting is: Enabled.

**Note:** If this policy setting is disabled, the Security Center notifies you that the overall security of the operating system has been reduced.

#### **Rationale:**

This is the setting that turns on or off UAC. If this setting is disabled, UAC will not be used and any security benefits and risk mitigations that are dependent on UAC will not be present on the system.

#### **Impact:**

None - this is the default behavior. Users and administrators will need to learn to work with UAC prompts and adjust their work habits to use least privilege operations.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:UserAccountControl_RunAllAdministratorsInAdminApprovalMode_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:UserAccountControl_RunAllAdministratorsInAdminApprovalMode
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:EnableLUA
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/ UserAccountControl_RunAllAdministratorsInAdminApprovalMode
Data type:	Integer
Value:	1

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/User account control* settings.

## **Default Value:**

Enabled. (Admin Approval Mode is enabled. This policy must be enabled and related UAC policy settings must also be set appropriately to allow the built-in Administrator account and all other users who are members of the Administrators group to run in Admin Approval Mode.)

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**2.3.17.7 (L1) Ensure 'User Account Control: Switch to the secure desktop when prompting for elevation' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting controls whether the elevation request prompt is displayed on the interactive user's desktop or the secure desktop.

The recommended state for this setting is: Enabled.

**Rationale:**

Standard elevation prompt dialog boxes can be spoofed, which may cause users to disclose their passwords to malicious software. The secure desktop presents a very distinct appearance when prompting for elevation, where the user desktop dims, and the elevation prompt UI is more prominent. This increases the likelihood that users who become accustomed to the secure desktop will recognize a spoofed elevation prompt dialog box and not fall for the trick.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:UserAccountControl_SwitchToTheSecureDesktopWhenPromptingForElevation_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:UserAccountControl_SwitchToTheSecureDesktopWhenPromptingForElevation
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:PromptOnSecureDesktop
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          UserAccountControl_SwitchToTheSecureDesktopWhenPromptingFor
          Elevation
Data type: Integer
Value: 1
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/User account control* settings.

## **Default Value:**

Enabled. (All elevation requests go to the secure desktop regardless of prompt behavior policy settings for administrators and standard users.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**2.3.17.8 (L1) Ensure 'User Account Control: Virtualize file and registry write failures to per-user locations' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting controls whether application write failures are redirected to defined registry and file system locations. This policy setting mitigates applications that run as administrator and write run-time application data to:

- %ProgramFiles%
- %windir%
- %windir%\System32
- HKEY\_LOCAL\_MACHINE\SOFTWARE

The recommended state for this setting is: Enabled.

**Rationale:**

This setting reduces vulnerabilities by ensuring that legacy applications only write data to permitted locations.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LocalPoliciesSecurityOptions:UserAccountControl_VirtualizeFileAndRegistryWriteFailuresToPerUserLocations_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\LocalPoliciesSecurityOptions:UserAccountControl_VirtualizeFileAndRegistryWriteFailuresToPerUserLocations
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:EnableVirtualization
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/LocalPoliciesSecurityOptions/
          UserAccountControl_VirtualizeFileAndRegistryWriteFailures
          ToPerUserLocations
Data type: Integer
Value: 1
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be set using the *Endpoint protection* profile using *Local device security options/User account control* settings.

## **Default Value:**

Enabled. (Application write failures are redirected at run time to defined user locations for both the file system and registry.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## ***3 Event Log***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

## ***4 Restricted Groups***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

## **5 System Services**

This section contains recommendations for system services.

### *5.1 (L1) Ensure 'Xbox Accessory Management Service (XboxGipSvc)' is set to 'Disabled' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This service manages connected Xbox Accessories.

The recommended state for this setting is: Disabled.

#### **Rationale:**

Xbox Live is a gaming service and has no place in an enterprise managed environment (perhaps unless it is a gaming company).

#### **Impact:**

Connected Xbox accessories may not function.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\SystemServices:ConfigureXboxAccessoryManagementServiceStartupMode\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 4.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\SystemServices:ConfigureXboxAccessoryManagementServiceStartupMode

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Endpoint protection/Xbox services
Setting Name:	Xbox Accessory Management Service
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Windows 10 R1703: Manual

Windows 10 R1709 and newer: Manual (Trigger Start)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

**5.2 (L1) Ensure 'Xbox Live Auth Manager (XblAuthManager)' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

Provides authentication and authorization services for interacting with Xbox Live.

The recommended state for this setting is: Disabled.

**Rationale:**

Xbox Live is a gaming service and has no place in an enterprise managed environment (perhaps unless it is a gaming company).

**Impact:**

Connections to Xbox Live may fail and applications that interact with that service may also fail.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\SystemServices:ConfigureXboxLiveAuthManagerServiceStartupMode\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 4.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\SystemServices:ConfigureXboxLiveAuthManagerServiceStartupMode

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Endpoint protection/Xbox services
Setting Name:	Xbox Live Auth Manager Service
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Manual

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **5.3 (L1) Ensure 'Xbox Live Game Save (XblGameSave)' is set to 'Disabled' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This service syncs save data for Xbox Live save enabled games.

The recommended state for this setting is: Disabled.

### **Rationale:**

Xbox Live is a gaming service and has no place in an enterprise managed environment (perhaps unless it is a gaming company).

### **Impact:**

Game save data will not upload to or download from Xbox Live.

### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\SystemServices:ConfigureXboxLiveGameSaveServiceStartupMode\_ProviderSet

### **To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 4.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\SystemServices:ConfigureXboxLiveGameSaveServiceStartupMode

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Endpoint protection/Xbox services
Setting Name:	Xbox Live Game Save Service
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Windows 10 R1507 and R1511: Manual

Windows 10 R1607 and newer: Manual (Trigger Start)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **5.4 (L1) Ensure 'Xbox Live Networking Service (XboxNetApiSvc)' is set to 'Disabled' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This service supports the Windows.Networking.XboxLive application programming interface.

The recommended state for this setting is: Disabled.

### **Rationale:**

Xbox Live is a gaming service and has no place in an enterprise managed environment (perhaps unless it is a gaming company).

### **Impact:**

Connections to Xbox Live may fail and applications that interact with that service may also fail.

### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\SystemServices:ConfigureXboxLiveNetworkingServiceStartupMode\_ProviderSet

### **To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 4.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\SystemServices:ConfigureXboxLiveNetworkingServiceStartupMode

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Endpoint protection/Xbox services
Setting Name:	Xbox Live Netowrking Service
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Manual

## **CIS Controls:**

Version 7

### 9.2 Ensure Only Approved Ports, Protocols and Services Are Running

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **6 Registry**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

## **7 File System**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

## **8 Wired Network (IEEE 802.3) Policies**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

## **9 Windows Firewall with Advanced Security**

This section contains recommendations for configuring the Windows Firewall.

### **9.1 Domain Profile**

This section contains recommendations for the Domain Profile of the Windows Firewall.

#### **9.1.1 (L1) Ensure 'Windows Firewall: Domain: Firewall state' is set to 'Enabled' (Automated)**

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

Select On (recommended) to have Windows Firewall with Advanced Security use the settings for this profile to filter network traffic. If you select Off, Windows Firewall with Advanced Security will not use any of the firewall rules or connection security rules for this profile.

The recommended state for this setting is: Enabled.

##### **Rationale:**

If the firewall is turned off all traffic will be able to access the system and an attacker may be more easily able to remotely exploit a weakness in a network service.

##### **Impact:**

None - this is the default behavior.

##### **Audit:**

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SYSTEM\ControlSet001\Services\SharedAccess\Parameters\FirewallPolicy\Mdm\DomainProfile:EnableFirewall
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Endpoint protection/Microsoft Defender Firewall/Domain (workplace) network
Setting Name:	Microsoft Defender Firewall
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

On (recommended). (The Windows Firewall with Advanced Security will be active in this profile.)

## **CIS Controls:**

Version 7

### **9.4 Apply Host-based Firewalls or Port Filtering**

Apply host-based firewalls or port filtering tools on end systems, with a default-deny rule that drops all traffic except those services and ports that are explicitly allowed.

### **9.1.2 (L1) Ensure 'Windows Firewall:Domain: Inbound connections' is set to 'Block' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This setting determines the behavior for inbound connections that do not match an inbound firewall rule.

The recommended state for this setting is: Block.

#### **Rationale:**

If the firewall allows all traffic to access the system then an attacker may be more easily able to remotely exploit a weakness in a network service.

#### **Impact:**

None - this is the default behavior.

#### **Audit:**

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SYSTEM\ControlSet001\Services\SharedAccess\Parameters\FirewallPolicy\Mdm\DomainProfile:DefaultInboundAction

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Block:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Endpoint protection/Microsoft Defender Firewall/Domain (workplace) network
Setting Name:	Default action for inbound connections
Configuration:	Block

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Block (default). (The Windows Firewall with Advanced Security will block all inbound connections that do not match an inbound firewall rule in this profile.)

## **CIS Controls:**

Version 7

### **9.4 Apply Host-based Firewalls or Port Filtering**

Apply host-based firewalls or port filtering tools on end systems, with a default-deny rule that drops all traffic except those services and ports that are explicitly allowed.

#### **11.2 Document Traffic Configuration Rules**

All configuration rules that allow traffic to flow through network devices should be documented in a configuration management system with a specific business reason for each rule, a specific individual's name responsible for that business need, and an expected duration of the need.

### **9.1.3 (L1) Ensure 'Windows Firewall: Domain: Outbound connections' is set to 'Allow' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This setting determines the behavior for outbound connections that do not match an outbound firewall rule.

The recommended state for this setting is: Allow.

#### **Rationale:**

Some people believe that it is prudent to block all outbound connections except those specifically approved by the user or administrator. Microsoft disagrees with this opinion, blocking outbound connections by default will force users to deal with a large number of dialog boxes prompting them to authorize or block applications such as their web browser or instant messaging software. Additionally, blocking outbound traffic has little value because if an attacker has compromised the system they can reconfigure the firewall anyway.

#### **Impact:**

None - this is the default behavior.

#### **Audit:**

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SYSTEM\ControlSet001\Services\SharedAccess\Parameters\FirewallPolicy\Mdm\DomainProfile:DefaultOutboundAction

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Allow:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Endpoint protection/Microsoft Defender Firewall/Domain (workplace) network
Setting Name:	Default action for outbound connections
Configuration:	Allow

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Allow (default). (The Windows Firewall with Advanced Security will allow all outbound connections in this profile unless there is a firewall rule explicitly blocking it.)

## **CIS Controls:**

Version 7

### **9.4 Apply Host-based Firewalls or Port Filtering**

Apply host-based firewalls or port filtering tools on end systems, with a default-deny rule that drops all traffic except those services and ports that are explicitly allowed.

#### **11.2 Document Traffic Configuration Rules**

All configuration rules that allow traffic to flow through network devices should be documented in a configuration management system with a specific business reason for each rule, a specific individual's name responsible for that business need, and an expected duration of the need.

**9.1.4 (L1) Ensure 'Windows Firewall: Domain: Settings: Display a notification' is set to 'Block' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

Select this option to have Windows Firewall with Advanced Security display notifications to the user when a program is blocked from receiving inbound connections.

The recommended state for this setting is: Block.

**Rationale:**

Firewall notifications can be complex and may confuse the end users, who would not be able to address the alert.

**Impact:**

Windows Firewall will not display a notification when a program is blocked from receiving inbound connections.

**Audit:**

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SYSTEM\ControlSet001\Services\SharedAccess\Parameters\FirewallPolicy\Mdm\DomainProfile:DisableNotifications

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Block:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Endpoint protection/Microsoft Defender Firewall/Domain (workplace) network
Setting Name:	Inbound notifications
Configuration:	Block

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Yes. (Windows Firewall with Advanced Security will display a notification when a program is blocked from receiving inbound connections.)

## **CIS Controls:**

Version 7

### **9.4 Apply Host-based Firewalls or Port Filtering**

Apply host-based firewalls or port filtering tools on end systems, with a default-deny rule that drops all traffic except those services and ports that are explicitly allowed.

#### **11.2 Document Traffic Configuration Rules**

All configuration rules that allow traffic to flow through network devices should be documented in a configuration management system with a specific business reason for each rule, a specific individual's name responsible for that business need, and an expected duration of the need.

## **9.2 Private Profile**

This section contains recommendations for the Private Profile of the Windows Firewall.

### ***9.2.1 (L1) Ensure 'Windows Firewall: Private: Firewall state' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

Select On (recommended) to have Windows Firewall with Advanced Security use the settings for this profile to filter network traffic. If you select Off, Windows Firewall with Advanced Security will not use any of the firewall rules or connection security rules for this profile.

The recommended state for this setting is: Enabled.

#### **Rationale:**

If the firewall is turned off all traffic will be able to access the system and an attacker may be more easily able to remotely exploit a weakness in a network service.

#### **Impact:**

None - this is the default behavior.

#### **Audit:**

#### **To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SYSTEM\ControlSet001\Services\SharedAccess\Parameters\FirewallPolicy\Mdm\PublicProfile:EnableFirewall

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Endpoint protection/Microsoft Defender Firewall/Private (discoverable) network
Setting Name:	Microsoft Defender Firewall
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

On (recommended). (The Windows Firewall with Advanced Security will be active in this profile.)

## **CIS Controls:**

Version 7

### **9.4 Apply Host-based Firewalls or Port Filtering**

Apply host-based firewalls or port filtering tools on end systems, with a default-deny rule that drops all traffic except those services and ports that are explicitly allowed.

## *9.2.2 (L1) Ensure 'Windows Firewall: Private: Inbound connections' is set to 'Block' (Automated)*

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This setting determines the behavior for inbound connections that do not match an inbound firewall rule.

The recommended state for this setting is: Block.

### **Rationale:**

If the firewall allows all traffic to access the system then an attacker may be more easily able to remotely exploit a weakness in a network service.

### **Impact:**

None - this is the default behavior.

### **Audit:**

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SYSTEM\ControlSet001\Services\SharedAccess\Parameters\FirewallPolicy\Mdm\PublicProfile:DefaultInboundAction

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Block:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Endpoint protection/Microsoft Defender Firewall/Private (discoverable) network
Setting Name:	Default action for inbound connections
Configuration:	Block

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Block (default). (The Windows Firewall with Advanced Security will block all inbound connections that do not match an inbound firewall rule in this profile.)

## **CIS Controls:**

Version 7

### **9.4 Apply Host-based Firewalls or Port Filtering**

Apply host-based firewalls or port filtering tools on end systems, with a default-deny rule that drops all traffic except those services and ports that are explicitly allowed.

#### **11.2 Document Traffic Configuration Rules**

All configuration rules that allow traffic to flow through network devices should be documented in a configuration management system with a specific business reason for each rule, a specific individual's name responsible for that business need, and an expected duration of the need.

### *9.2.3 (L1) Ensure 'Windows Firewall: Private: Outbound connections' is set to 'Allow' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This setting determines the behavior for outbound connections that do not match an outbound firewall rule.

The recommended state for this setting is: Allow.

**Note:** If you set Outbound connections to Block and then deploy the firewall policy by using a GPO, computers that receive the GPO settings cannot receive subsequent Group Policy updates unless you create and deploy an outbound rule that enables Group Policy to work. Predefined rules for Core Networking include outbound rules that enable Group Policy to work. Ensure that these outbound rules are active, and thoroughly test firewall profiles before deploying.

#### **Rationale:**

Some people believe that it is prudent to block all outbound connections except those specifically approved by the user or administrator. Microsoft disagrees with this opinion, blocking outbound connections by default will force users to deal with a large number of dialog boxes prompting them to authorize or block applications such as their web browser or instant messaging software. Additionally, blocking outbound traffic has little value because if an attacker has compromised the system they can reconfigure the firewall anyway.

#### **Impact:**

None - this is the default behavior.

## Audit:

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SYSTEM\ControlSet001\Services\SharedAccess\Parameters\FirewallPolicy\Mdm\PublicProfile:DefaultOutboundAction

## Remediation:

To establish the recommended configuration, set the following *Device Configuration Policy* to Allow:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path: Endpoint protection/Microsoft Defender Firewall/Private  
discoverable) network  
Setting Name: Default action for outbound connections  
Configuration: Allow

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## Default Value:

Allow (default). (The Windows Firewall with Advanced Security will allow all outbound connections in this profile unless there is a firewall rule explicitly blocking it.)

## **CIS Controls:**

Version 7

### **9.4 Apply Host-based Firewalls or Port Filtering**

Apply host-based firewalls or port filtering tools on end systems, with a default-deny rule that drops all traffic except those services and ports that are explicitly allowed.

#### **11.2 Document Traffic Configuration Rules**

All configuration rules that allow traffic to flow through network devices should be documented in a configuration management system with a specific business reason for each rule, a specific individual's name responsible for that business need, and an expected duration of the need.

#### **9.2.4 (L1) Ensure 'Windows Firewall: Private: Settings: Display a notification' is set to 'Block' (Automated)**

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

Select this option to have Windows Firewall with Advanced Security display notifications to the user when a program is blocked from receiving inbound connections.

The recommended state for this setting is: Block.

##### **Rationale:**

Firewall notifications can be complex and may confuse the end users, who would not be able to address the alert.

##### **Impact:**

Windows Firewall will not display a notification when a program is blocked from receiving inbound connections.

##### **Audit:**

##### **To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SYSTEM\ControlSet001\Services\SharedAccess\Parameters\FirewallPolicy\Mdm\PublicProfile:DisableNotifications

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Block:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Endpoint protection/Microsoft Defender Firewall/Private (discoverable) network
Setting Name:	Inbound notifications
Configuration:	Block

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Yes. (Windows Firewall with Advanced Security will display a notification when a program is blocked from receiving inbound connections.)

## **CIS Controls:**

Version 7

### **9.4 Apply Host-based Firewalls or Port Filtering**

Apply host-based firewalls or port filtering tools on end systems, with a default-deny rule that drops all traffic except those services and ports that are explicitly allowed.

#### **11.2 Document Traffic Configuration Rules**

All configuration rules that allow traffic to flow through network devices should be documented in a configuration management system with a specific business reason for each rule, a specific individual's name responsible for that business need, and an expected duration of the need.

## **9.3 Public Profile**

This section contains recommendations for the Public Profile of the Windows Firewall.

### *9.3.1 (L1) Ensure 'Windows Firewall: Public: Firewall state' is set to 'Enabled' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

Select On (recommended) to have Windows Firewall with Advanced Security use the settings for this profile to filter network traffic. If you select Off, Windows Firewall with Advanced Security will not use any of the firewall rules or connection security rules for this profile.

The recommended state for this setting is: Enabled.

#### **Rationale:**

If the firewall is turned off all traffic will be able to access the system and an attacker may be more easily able to remotely exploit a weakness in a network service.

#### **Impact:**

None - this is the default behavior.

## **Audit:**

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SYSTEM\ControlSet001\Services\SharedAccess\Parameters\FirewallPolicy\Mdm\StandardProfile:EnableFirewall

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path: Endpoint protection/Microsoft Defender Firewall/Public (non-discoverable) network  
Setting Name: Microsoft Defender Firewall  
Configuration: Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

On (recommended). (The Windows Firewall with Advanced Security will be active in this profile.)

## **CIS Controls:**

Version 7

### **9.4 Apply Host-based Firewalls or Port Filtering**

Apply host-based firewalls or port filtering tools on end systems, with a default-deny rule that drops all traffic except those services and ports that are explicitly allowed.

### *9.3.2 (L1) Ensure 'Windows Firewall: Public: Inbound connections' is set to 'Block' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This setting determines the behavior for inbound connections that do not match an inbound firewall rule.

The recommended state for this setting is: Block.

#### **Rationale:**

If the firewall allows all traffic to access the system then an attacker may be more easily able to remotely exploit a weakness in a network service.

#### **Impact:**

None - this is the default behavior.

#### **Audit:**

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SYSTEM\ControlSet001\Services\SharedAccess\Parameters\FirewallPolicy\Mdm\StandardProfile:DefaultInboundAction

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Block:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Endpoint protection/Microsoft Defender Firewall/Public (non-discoverable) network
Setting Name:	Default action for inbound connections
Configuration:	Block

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Block (default). (The Windows Firewall with Advanced Security will block all inbound connections that do not match an inbound firewall rule in this profile.)

## **CIS Controls:**

Version 7

### **9.4 Apply Host-based Firewalls or Port Filtering**

Apply host-based firewalls or port filtering tools on end systems, with a default-deny rule that drops all traffic except those services and ports that are explicitly allowed.

#### **11.2 Document Traffic Configuration Rules**

All configuration rules that allow traffic to flow through network devices should be documented in a configuration management system with a specific business reason for each rule, a specific individual's name responsible for that business need, and an expected duration of the need.

### *9.3.3 (L1) Ensure 'Windows Firewall: Public: Outbound connections' is set to 'Allow' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This setting determines the behavior for outbound connections that do not match an outbound firewall rule.

The recommended state for this setting is: Allow.

**Note:** If you set Outbound connections to Block and then deploy the firewall policy by using a GPO, computers that receive the GPO settings cannot receive subsequent Group Policy updates unless you create and deploy an outbound rule that enables Group Policy to work. Predefined rules for Core Networking include outbound rules that enable Group Policy to work. Ensure that these outbound rules are active, and thoroughly test firewall profiles before deploying.

#### **Rationale:**

Some people believe that it is prudent to block all outbound connections except those specifically approved by the user or administrator. Microsoft disagrees with this opinion, blocking outbound connections by default will force users to deal with a large number of dialog boxes prompting them to authorize or block applications such as their web browser or instant messaging software. Additionally, blocking outbound traffic has little value because if an attacker has compromised the system they can reconfigure the firewall anyway.

#### **Impact:**

None - this is the default behavior.

## **Audit:**

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SYSTEM\ControlSet001\Services\SharedAccess\Parameters\FirewallPolicy\Mdm\StandardProfile:DefaultOutboundAction

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Allow:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path: Endpoint protection/Microsoft Defender Firewall/Public (non-discoverable) network  
Setting Name: Default action for outbound connections  
Configuration: Allow

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Allow (default). (The Windows Firewall with Advanced Security will allow all outbound connections in this profile unless there is a firewall rule explicitly blocking it.)

## **CIS Controls:**

Version 7

### **9.4 Apply Host-based Firewalls or Port Filtering**

Apply host-based firewalls or port filtering tools on end systems, with a default-deny rule that drops all traffic except those services and ports that are explicitly allowed.

#### **11.2 Document Traffic Configuration Rules**

All configuration rules that allow traffic to flow through network devices should be documented in a configuration management system with a specific business reason for each rule, a specific individual's name responsible for that business need, and an expected duration of the need.

### **9.3.4 (L1) Ensure 'Windows Firewall: Public: Settings: Display a notification' is set to 'Block' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

Select this option to have Windows Firewall with Advanced Security display notifications to the user when a program is blocked from receiving inbound connections.

The recommended state for this setting is: Block.

#### **Rationale:**

Some organizations may prefer to avoid alarming users when firewall rules block certain types of network activity. However, notifications can be helpful when troubleshooting network issues involving the firewall.

#### **Impact:**

Windows Firewall will not display a notification when a program is blocked from receiving inbound connections.

#### **Audit:**

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SYSTEM\ControlSet001\Services\SharedAccess\Parameters\FirewallPolicy\Mdm\StandardProfile:DisableNotifications
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Block:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Endpoint protection/Microsoft Defender Firewall/Public (non-discoverable) network
Setting Name:	Inbound notifications
Configuration:	Block

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Yes. (Windows Firewall with Advanced Security will display a notification when a program is blocked from receiving inbound connections.)

## **CIS Controls:**

Version 7

### **9.4 Apply Host-based Firewalls or Port Filtering**

Apply host-based firewalls or port filtering tools on end systems, with a default-deny rule that drops all traffic except those services and ports that are explicitly allowed.

### **11.2 Document Traffic Configuration Rules**

All configuration rules that allow traffic to flow through network devices should be documented in a configuration management system with a specific business reason for each rule, a specific individual's name responsible for that business need, and an expected duration of the need.

## **17 Advanced Audit Policy Configuration**

This section contains recommendations for configuring the Windows audit facilities.

### **17.1 Account Logon**

This section contains recommendations for configuring the Account Logon audit policy.

#### ***17.1.1 (L1) Ensure 'Audit Credential Validation' is set to 'Success and Failure' (Automated)***

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

This subcategory reports the results of validation tests on credentials submitted for a user account logon request. These events occur on the computer that is authoritative for the credentials. For domain accounts, the Domain Controller is authoritative, whereas for local accounts, the local computer is authoritative. In domain environments, most of the Account Logon events occur in the Security log of the Domain Controllers that are authoritative for the domain accounts. However, these events can occur on other computers in the organization when local accounts are used to log on. Events for this subcategory include:

- 4774: An account was mapped for logon.
- 4775: An account could not be mapped for logon.
- 4776: The Domain Controller attempted to validate the credentials for an account.
- 4777: The Domain Controller failed to validate the credentials for an account.

The recommended state for this setting is: Success and Failure.

##### **Rationale:**

Auditing these events may be useful when investigating a security incident.

## **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:AccountLogon\_AuditCredentialValidation\_ProviderSet

### **To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 3.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:AccountLogon\_AuditCredentialValidation

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Confirm that the audit setting is set to Success and Failure.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success and Failure:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Audit/AccountLogon_
AuditCredentialValidation
Data type: Integer
Value: 3
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

No Auditing.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

#### **16.13 Alert on Account Login Behavior Deviation**

Alert when users deviate from normal login behavior, such as time-of-day, workstation location and duration.

## **17.2 Account Management**

This section contains recommendations for configuring the Account Management audit policy.

### *17.2.1 (L1) Ensure 'Audit Application Group Management' is set to 'Success and Failure' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting allows you to audit events generated by changes to application groups such as the following:

- Application group is created, changed, or deleted.
- Member is added or removed from an application group.

Application groups are utilized by Windows Authorization Manager, which is a flexible framework created by Microsoft for integrating role-based access control (RBAC) into applications. More information on Windows Authorization Manager is available at [MSDN - Windows Authorization Manager](#).

The recommended state for this setting is: Success and Failure.

#### **Rationale:**

Auditing events in this category may be useful when investigating an incident.

#### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:AccountManagement\_AuditApplicationGroupManagement\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 3.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:AccountManagement\_AuditApplicationGroupManagement

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Confirm that the audit setting is set to Success and Failure.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success and Failure:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Audit/AccountManagement_Audit
	ApplicationGroupManagement
Data type:	Integer
Value:	3

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

No Auditing.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

## **17.2.2 (L1) Ensure 'Audit Security Group Management' is set to include 'Success' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This subcategory reports each event of security group management, such as when a security group is created, changed, or deleted or when a member is added to or removed from a security group. If you enable this Audit policy setting, administrators can track events to detect malicious, accidental, and authorized creation of security group accounts. Events for this subcategory include:

- 4727: A security-enabled global group was created.
- 4728: A member was added to a security-enabled global group.
- 4729: A member was removed from a security-enabled global group.
- 4730: A security-enabled global group was deleted.
- 4731: A security-enabled local group was created.
- 4732: A member was added to a security-enabled local group.
- 4733: A member was removed from a security-enabled local group.
- 4734: A security-enabled local group was deleted.
- 4735: A security-enabled local group was changed.
- 4737: A security-enabled global group was changed.
- 4754: A security-enabled universal group was created.
- 4755: A security-enabled universal group was changed.
- 4756: A member was added to a security-enabled universal group.
- 4757: A member was removed from a security-enabled universal group.
- 4758: A security-enabled universal group was deleted.
- 4764: A group's type was changed.

The recommended state for this setting is to include: Success.

### **Rationale:**

Auditing these events may be useful when investigating a security incident.

## **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:AccountManagement\_AuditSecurityGroupManagement\_ProviderSet

### **To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 3.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:AccountManagement\_AuditSecurityGroupManagement

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to include Success.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to include Success:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Audit/AccountManagement_Audit SecurityGroupManagement
Data type:	Integer
Value:	1

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Success.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

### **16.6 Maintain an Inventory of Accounts**

Maintain an inventory of all accounts organized by authentication system.

### **17.2.3 (L1) Ensure 'Audit User Account Management' is set to 'Success and Failure' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This subcategory reports each event of user account management, such as when a user account is created, changed, or deleted; a user account is renamed, disabled, or enabled; or a password is set or changed. If you enable this Audit policy setting, administrators can track events to detect malicious, accidental, and authorized creation of user accounts. Events for this subcategory include:

- 4720: A user account was created.
- 4722: A user account was enabled.
- 4723: An attempt was made to change an account's password.
- 4724: An attempt was made to reset an account's password.
- 4725: A user account was disabled.
- 4726: A user account was deleted.
- 4738: A user account was changed.
- 4740: A user account was locked out.
- 4765: SID History was added to an account.
- 4766: An attempt to add SID History to an account failed.
- 4767: A user account was unlocked.
- 4780: The ACL was set on accounts which are members of administrators groups.
- 4781: The name of an account was changed.
- 4794: An attempt was made to set the Directory Services Restore Mode.
- 5376: Credential Manager credentials were backed up.
- 5377: Credential Manager credentials were restored from a backup.

The recommended state for this setting is: Success and Failure.

#### **Rationale:**

Auditing these events may be useful when investigating a security incident.

## **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:AccountManagement_AuditUserAccountManagement_ProviderSet
```

### **To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 3.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:AccountManagement_AuditUserAccountManagement
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to Success and Failure.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success and Failure:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Audit/AccountManagement_Audit UserAccountManagement
Data type:	Integer
Value:	3

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Success.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

## **17.3 Detailed Tracking**

This section contains recommendations for configuring the Detailed Tracking audit policy.

### ***17.3.1 (L1) Ensure 'Audit PNP Activity' is set to include 'Success' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting allows you to audit when plug and play detects an external device.

The recommended state for this setting is to include: Success.

**Note:** A Windows 10, Server 2016 or newer OS is required to access and set this value in Group Policy.

#### **Rationale:**

Enabling this setting will allow a user to audit events when a device is plugged into a system. This can help alert IT staff if unapproved devices are plugged in.

#### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:DetailedTracking_AuditPNPActivity_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:DetailedTracking_AuditPNPActivity
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to include Success.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to include Success:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Audit/DetailedTracking_Audit
	PNPActivity
Data type:	Integer
Value:	1

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

No Auditing.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

## **17.3.2 (L1) Ensure 'Audit Process Creation' is set to include 'Success' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This subcategory reports the creation of a process and the name of the program or user that created it. Events for this subcategory include:

- 4688: A new process has been created.
- 4696: A primary token was assigned to process.

Refer to Microsoft Knowledge Base article 947226: [Description of security events in Windows Vista and in Windows Server 2008](#) for the most recent information about this setting.

The recommended state for this setting is to include: Success.

### **Rationale:**

Auditing these events may be useful when investigating a security incident.

### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:DetailedTracking_AuditProcessCreation_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:DetailedTracking_AuditProcessCreation
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to include Success.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to include Success:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Audit/DetailedTracking_Audit
ProcessCreation	
Data type:	Integer
Value:	1

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.  
17.3.2 (L1) Ensure 'Audit Process Creation' is set to include 'Success'

## **Default Value:**

No Auditing.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

## **17.4 DS Access**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

## **17.5 Logon/Logoff**

This section contains recommendations for configuring the Logon/Logoff audit policy.

### ***17.5.1 (L1) Ensure 'Audit Account Lockout' is set to include 'Failure' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This subcategory reports when a user's account is locked out as a result of too many failed logon attempts. Events for this subcategory include:

- 4625: An account failed to log on.

The recommended state for this setting is to include: Failure.

#### **Rationale:**

Auditing these events may be useful when investigating a security incident.

#### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:AccountLogonLogoff\_AuditAccountLockout\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 2.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:AccountLogonLogoff\_AuditAccountLockout

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to include Failure.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to include Failure:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Audit/AccountLogon
          Logoff_AuditAccountLockout
Data type: Integer
Value: 2
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Success.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

### **16.6 Maintain an Inventory of Accounts**

Maintain an inventory of all accounts organized by authentication system.

## **17.5.2 (L1) Ensure 'Audit Group Membership' is set to include 'Success' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy allows you to audit the group membership information in the user's logon token. Events in this subcategory are generated on the computer on which a logon session is created. For an interactive logon, the security audit event is generated on the computer that the user logged on to. For a network logon, such as accessing a shared folder on the network, the security audit event is generated on the computer hosting the resource.

The recommended state for this setting is to include: Success.

**Note:** A Windows 10, Server 2016 or newer OS is required to access and set this value in Group Policy.

### **Rationale:**

Auditing these events may be useful when investigating a security incident.

### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:AccountLogonLogoff_AuditGroupMembership_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:AccountLogonLogoff_AuditGroupMembership
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to include Success.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to include Success:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Audit/Account LogonLogoff_AuditGroupMembership
Data type:	Integer
Value:	1

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

No Auditing.

## **CIS Controls:**

Version 7

### **4.8 Log and Alert on Changes to Administrative Group Membership**

Configure systems to issue a log entry and alert when an account is added to or removed from any group assigned administrative privileges.

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

### **17.5.3 (L1) Ensure 'Audit Logoff' is set to include 'Success' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This subcategory reports when a user logs off from the system. These events occur on the accessed computer. For interactive logons, the generation of these events occurs on the computer that is logged on to. If a network logon takes place to access a share, these events generate on the computer that hosts the accessed resource. If you configure this setting to No auditing, it is difficult or impossible to determine which user has accessed or attempted to access organization computers. Events for this subcategory include:

- 4634: An account was logged off.
- 4647: User initiated logoff.

The recommended state for this setting is to include: Success.

#### **Rationale:**

Auditing these events may be useful when investigating a security incident.

#### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:AccountLogonLogoff_AuditLogoff_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:AccountLogonLogoff_AuditLogoff
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to include Success.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to include Success:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Audit/Account
          LogonLogoff_AuditLogoff
Data type: Integer
Value: 1
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Success.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

### **16.13 Alert on Account Login Behavior Deviation**

Alert when users deviate from normal login behavior, such as time-of-day, workstation location and duration.

## **17.5.4 (L1) Ensure 'Audit Logon' is set to 'Success and Failure' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This subcategory reports when a user attempts to log on to the system. These events occur on the accessed computer. For interactive logons, the generation of these events occurs on the computer that is logged on to. If a network logon takes place to access a share, these events generate on the computer that hosts the accessed resource. If you configure this setting to No auditing, it is difficult or impossible to determine which user has accessed or attempted to access organization computers. Events for this subcategory include:

- 4624: An account was successfully logged on.
- 4625: An account failed to log on.
- 4648: A logon was attempted using explicit credentials.
- 4675: SIDs were filtered.

The recommended state for this setting is: Success and Failure.

### **Rationale:**

Auditing these events may be useful when investigating a security incident.

### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:AccountLogonLogoff\_AuditLogon\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 3.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:AccountLogonLogoff\_AuditLogon

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to Success and Failure.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success and Failure:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Audit/Account
	LogonLogoff_AuditLogon
Data type:	Integer
Value:	3

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Success.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

### **16.13 Alert on Account Login Behavior Deviation**

Alert when users deviate from normal login behavior, such as time-of-day, workstation location and duration.

## **17.5.5 (L1) Ensure 'Audit Other Logon/Logoff Events' is set to 'Success and Failure' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This subcategory reports other logon/logoff-related events, such as Remote Desktop Services session disconnects and reconnects, using RunAs to run processes under a different account, and locking and unlocking a workstation. Events for this subcategory include:

- 4649: A replay attack was detected.
- 4778: A session was reconnected to a Window Station.
- 4779: A session was disconnected from a Window Station.
- 4800: The workstation was locked.
- 4801: The workstation was unlocked.
- 4802: The screen saver was invoked.
- 4803: The screen saver was dismissed.
- 5378: The requested credentials delegation was disallowed by policy.
- 5632: A request was made to authenticate to a wireless network.
- 5633: A request was made to authenticate to a wired network.

The recommended state for this setting is: Success and Failure.

### **Rationale:**

Auditing these events may be useful when investigating a security incident.

### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:AccountLogonLogoff\_AuditOtherLogonLogoffEvents\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 3.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:AccountLogonLogoff\_AuditOtherLogonLogoffEvents

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Confirm that the audit setting is set to Success and Failure.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success and Failure:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Audit/Account LogonLogoff_AuditOtherLogonLogoffEvents
Data type:	Integer
Value:	3

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

No Auditing.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

### **16.13 Alert on Account Login Behavior Deviation**

Alert when users deviate from normal login behavior, such as time-of-day, workstation location and duration.

## *17.5.6 (L1) Ensure 'Audit Special Logon' is set to include 'Success' (Automated)*

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This subcategory reports when a special logon is used. A special logon is a logon that has administrator-equivalent privileges and can be used to elevate a process to a higher level. Events for this subcategory include:

- 4964 : Special groups have been assigned to a new logon.

The recommended state for this setting is to include: Success.

### **Rationale:**

Auditing these events may be useful when investigating a security incident.

### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:AccountLogonLogoff\_AuditSpecialLogon\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:AccountLogonLogoff\_AuditSpecialLogon

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to Success.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Audit/Account
	LogonLogoff_AuditSpecialLogon
Data type:	Integer
Value:	1

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Success.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

### **16.6 Maintain an Inventory of Accounts**

Maintain an inventory of all accounts organized by authentication system.

## **17.6 Object Access**

This section contains recommendations for configuring the Object Access audit policy.

### ***17.6.1 (L1) Ensure 'Audit Detailed File Share' is set to include 'Failure' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This subcategory allows you to audit attempts to access files and folders on a shared folder. Events for this subcategory include:

- 5145: network share object was checked to see whether client can be granted desired access.

The recommended state for this setting is to include: Failure

#### **Rationale:**

Auditing the Failures will log which unauthorized users attempted (and failed) to get access to a file or folder on a network share on this computer, which could possibly be an indication of malicious intent.

#### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:ObjectAccess_AuditDetailedFileShare_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 2.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:ObjectAccess_AuditDetailedFileShare
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to include `Failure`.

- *Open* an elevated command prompt (as Administrator)
- *Run* `AuditPol.exe /get /category:*`
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to include Failure:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Audit/ObjectAccess_Audit
          DetailedFileShare
Data type: Integer
Value: 2
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

No Auditing.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

### **14.6 Protect Information through Access Control Lists**

Protect all information stored on systems with file system, network share, claims, application, or database specific access control lists. These controls will enforce the principle that only authorized individuals should have access to the information based on their need to access the information as a part of their responsibilities.

## **17.6.2 (L1) Ensure 'Audit File Share' is set to 'Success and Failure' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting allows you to audit attempts to access a shared folder.

The recommended state for this setting is: Success and Failure.

**Note:** There are no system access control lists (SACLs) for shared folders. If this policy setting is enabled, access to all shared folders on the system is audited.

### **Rationale:**

In an enterprise managed environment, workstations should have limited file sharing activity, as file servers would normally handle the overall burden of file sharing activities. Any unusual file sharing activity on workstations may therefore be useful in an investigation of potentially malicious activity.

### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:ObjectAccess_AuditFileShare_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 3.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:ObjectAccess_AuditFileShare
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to Success and Failure.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success and Failure:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Audit/ObjectAccess_Audit
	FileShare
Data type:	Integer
Value:	3

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

No Auditing.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

### **14.6 Protect Information through Access Control Lists**

Protect all information stored on systems with file system, network share, claims, application, or database specific access control lists. These controls will enforce the principle that only authorized individuals should have access to the information based on their need to access the information as a part of their responsibilities.

### **17.6.3 (L1) Ensure 'Audit Other Object Access Events' is set to 'Success and Failure' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting allows you to audit events generated by the management of task scheduler jobs or COM+ objects.

For scheduler jobs, the following are audited:

- Job created.
- Job deleted.
- Job enabled.
- Job disabled.
- Job updated.

For COM+ objects, the following are audited:

- Catalog object added.
- Catalog object updated.
- Catalog object deleted.

The recommended state for this setting is: Success and Failure.

#### **Rationale:**

The unexpected creation of scheduled tasks and COM+ objects could potentially be an indication of malicious activity. Since these types of actions are generally low volume, it may be useful to capture them in the audit logs for use during an investigation.

#### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:ObjectTypeAccess\_AuditOtherObjectAccessEvents\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 3.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:ObjectTypeAccess\_AuditOtherObjectAccessEvents

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Confirm that the audit setting is set to Success and Failure.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success and Failure:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Audit/ObjectAccess_Audit OtherObjectAccessEvents
Data type:	Integer
Value:	3

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

No Auditing.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

## **17.6.4 (L1) Ensure 'Audit Removable Storage' is set to 'Success and Failure' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting allows you to audit user attempts to access file system objects on a removable storage device. A security audit event is generated only for all objects for all types of access requested. If you configure this policy setting, an audit event is generated each time an account accesses a file system object on a removable storage. Success audits record successful attempts and Failure audits record unsuccessful attempts. If you do not configure this policy setting, no audit event is generated when an account accesses a file system object on a removable storage.

The recommended state for this setting is: Success and Failure.

**Note:** A Windows 8.0, Server 2012 (non-R2) or newer OS is required to access and set this value in Group Policy.

### **Rationale:**

Auditing removable storage may be useful when investigating an incident. For example, if an individual is suspected of copying sensitive information onto a USB drive.

### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:ObjectAccess_AuditRemovableStorage_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 3.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:ObjectAccess_AuditRemovableStorage
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Confirm that the audit setting is set to Success and Failure.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success and Failure:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Audit/Object Access_AuditRemovableStorage
Data type:	Integer
Value:	3

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

No Auditing.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

## **17.7 Policy Change**

This section contains recommendations for configuring the Policy Change audit policy.

### ***17.7.1 (L1) Ensure 'Audit Audit Policy Change' is set to include 'Success' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This subcategory reports changes in audit policy including SACL changes. Events for this subcategory include:

- 4715: The audit policy (SACL) on an object was changed.
- 4719: System audit policy was changed.
- 4902: The Per-user audit policy table was created.
- 4904: An attempt was made to register a security event source.
- 4905: An attempt was made to unregister a security event source.
- 4906: The CrashOnAuditFail value has changed.
- 4907: Auditing settings on object were changed.
- 4908: Special Groups Logon table modified.
- 4912: Per User Audit Policy was changed.

The recommended state for this setting is to include: Success.

#### **Rationale:**

Auditing these events may be useful when investigating a security incident.

#### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:PolicyChange\_AuditPolicyChange\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:PolicyChange\_AuditPolicyChange

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to Success.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI:
./Device/Vendor/MSFT/Policy/Config/Audit/PolicyChange_AuditPolicyChange
Data type: Integer
Value: 1
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Success.

## **CIS Controls:**

Version 7

### **5.5 Implement Automated Configuration Monitoring Systems**

Utilize a Security Content Automation Protocol (SCAP) compliant configuration monitoring system to verify all security configuration elements, catalog approved exceptions, and alert when unauthorized changes occur.

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

## **17.7.2 (L1) Ensure 'Audit Authentication Policy Change' is set to include 'Success' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This subcategory reports changes in authentication policy. Events for this subcategory include:

- 4706: A new trust was created to a domain.
- 4707: A trust to a domain was removed.
- 4713: Kerberos policy was changed.
- 4716: Trusted domain information was modified.
- 4717: System security access was granted to an account.
- 4718: System security access was removed from an account.
- 4739: Domain Policy was changed.
- 4864: A namespace collision was detected.
- 4865: A trusted forest information entry was added.
- 4866: A trusted forest information entry was removed.
- 4867: A trusted forest information entry was modified.

The recommended state for this setting is to include: Success.

### **Rationale:**

Auditing these events may be useful when investigating a security incident.

### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:PolicyChange\_AuditAuthenticationPolicyChange\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:PolicyChange\_AuditAuthenticationPolicyChange

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to Success.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Audit/PolicyChange_Audit
          AuthenticationPolicyChange
Data type: Integer
Value: 1
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Success.

## **CIS Controls:**

Version 7

### **5.5 Implement Automated Configuration Monitoring Systems**

Utilize a Security Content Automation Protocol (SCAP) compliant configuration monitoring system to verify all security configuration elements, catalog approved exceptions, and alert when unauthorized changes occur.

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

### **17.7.3 (L1) Ensure 'Audit Authorization Policy Change' is set to include 'Success' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This subcategory reports changes in authorization policy. Events for this subcategory include:

- 4704: A user right was assigned.
- 4705: A user right was removed.
- 4706: A new trust was created to a domain.
- 4707: A trust to a domain was removed.
- 4714: Encrypted data recovery policy was changed.

The recommended state for this setting is to include: Success.

#### **Rationale:**

Auditing these events may be useful when investigating a security incident.

#### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:PolicyChange\_AuditAuthorizationPolicyChange\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:PolicyChange\_AuditAuthorizationPolicyChange

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to Success.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Audit/PolicyChange_Audit
          AuthorizationPolicyChange
Data type: Integer
Value: 1
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Success.

## **CIS Controls:**

Version 7

### **5.5 Implement Automated Configuration Monitoring Systems**

Utilize a Security Content Automation Protocol (SCAP) compliant configuration monitoring system to verify all security configuration elements, catalog approved exceptions, and alert when unauthorized changes occur.

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

## **17.7.4 (L1) Ensure 'Audit MPSSVC Rule-Level Policy Change' is set to 'Success and Failure' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This subcategory determines whether the operating system generates audit events when changes are made to policy rules for the Microsoft Protection Service (MPSSVC.exe). Events for this subcategory include:

- 4944: The following policy was active when the Windows Firewall started.
- 4945: A rule was listed when the Windows Firewall started.
- 4946: A change has been made to Windows Firewall exception list. A rule was added.
- 4947: A change has been made to Windows Firewall exception list. A rule was modified.
- 4948: A change has been made to Windows Firewall exception list. A rule was deleted.
- 4949: Windows Firewall settings were restored to the default values.
- 4950: A Windows Firewall setting has changed.
- 4951: A rule has been ignored because its major version number was not recognized by Windows Firewall.
- 4952: Parts of a rule have been ignored because its minor version number was not recognized by Windows Firewall. The other parts of the rule will be enforced.
- 4953: A rule has been ignored by Windows Firewall because it could not parse the rule.
- 4954: Windows Firewall Group Policy settings have changed. The new settings have been applied.
- 4956: Windows Firewall has changed the active profile.
- 4957: Windows Firewall did not apply the following rule.
- 4958: Windows Firewall did not apply the following rule because the rule referred to items not configured on this computer.

The recommended state for this setting is : Success and Failure

### **Rationale:**

Changes to firewall rules are important for understanding the security state of the computer and how well it is protected against network attacks.

## **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:PolicyChange\_AuditMPSSVCRuleLevelPolicyChange\_ProviderSet

### **To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 3.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:PolicyChange\_AuditMPSSVCRuleLevelPolicyChange

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to Success and Failure.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success and Failure:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Audit/PolicyChange_Audit
	MPSVCRuleLevelPolicyChange
Data type:	Integer
Value:	3

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

No Auditing.

## **CIS Controls:**

Version 7

### **5.5 Implement Automated Configuration Monitoring Systems**

Utilize a Security Content Automation Protocol (SCAP) compliant configuration monitoring system to verify all security configuration elements, catalog approved exceptions, and alert when unauthorized changes occur.

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

## **17.7.5 (L1) Ensure 'Audit Other Policy Change Events' is set to include 'Failure' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This subcategory contains events about EFS Data Recovery Agent policy changes, changes in Windows Filtering Platform filter, status on Security policy settings updates for local Group Policy settings, Central Access Policy changes, and detailed troubleshooting events for Cryptographic Next Generation (CNG) operations.

- 5063: A cryptographic provider operation was attempted.
- 5064: A cryptographic context operation was attempted.
- 5065: A cryptographic context modification was attempted.
- 5066: A cryptographic function operation was attempted.
- 5067: A cryptographic function modification was attempted.
- 5068: A cryptographic function provider operation was attempted.
- 5069: A cryptographic function property operation was attempted.
- 5070: A cryptographic function property modification was attempted.
- 6145: One or more errors occurred while processing security policy in the group policy objects.

The recommended state for this setting is to include: Failure.

### **Rationale:**

This setting can help detect errors in applied Security settings which came from Group Policy, and failure events related to Cryptographic Next Generation (CNG) functions.

### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:PolicyChange\_AuditOtherPolicyChangeEvents\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 2.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:PolicyChange\_AuditOtherPolicyChangeEvents

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to `Failure`.

- *Open* an elevated command prompt (as Administrator)
- *Run* `AuditPol.exe /get /category:*`
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Failure:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Audit/PolicyChange_Audit
          OtherPolicyChangeEvent
Data type: Integer
Value: 2
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

No Auditing.

## **CIS Controls:**

Version 7

### **5.5 Implement Automated Configuration Monitoring Systems**

Utilize a Security Content Automation Protocol (SCAP) compliant configuration monitoring system to verify all security configuration elements, catalog approved exceptions, and alert when unauthorized changes occur.

#### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

## **17.8 Privilege Use**

This section contains recommendations for configuring the Privilege Use audit policy.

### ***17.8.1 (L1) Ensure 'Audit Sensitive Privilege Use' is set to 'Success and Failure' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This subcategory reports when a user account or service uses a sensitive privilege. A sensitive privilege includes the following user rights:

- Act as part of the operating system
- Back up files and directories
- Create a token object
- Debug programs
- Enable computer and user accounts to be trusted for delegation
- Generate security audits
- Impersonate a client after authentication
- Load and unload device drivers
- Manage auditing and security log
- Modify firmware environment values
- Replace a process-level token
- Restore files and directories
- Take ownership of files or other objects

Auditing this subcategory will create a high volume of events. Events for this subcategory include:

- 4672: Special privileges assigned to new logon.
- 4673: A privileged service was called.
- 4674: An operation was attempted on a privileged object.

The recommended state for this setting is: Success and Failure.

#### **Rationale:**

Auditing these events may be useful when investigating a security incident.

## **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\  
Audit:PrivilegeUse_AuditSensitivePrivilegeUse_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 3.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\  
Device\Audit:PrivilegeUse_AuditSensitivePrivilegeUse
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to Success and Failure.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success and Failure:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Audit/PrivilegeUse_Audit
          SensitivePrivilegeUse
Data type: Integer
Value: 3
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

No Auditing.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

## **17.9 System**

This section contains recommendations for configuring the System audit policy.

### ***17.9.1 (L1) Ensure 'Audit IPsec Driver' is set to 'Success and Failure' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This subcategory reports on the activities of the Internet Protocol security (IPsec) driver. Events for this subcategory include:

- 4960: IPsec dropped an inbound packet that failed an integrity check. If this problem persists, it could indicate a network issue or that packets are being modified in transit to this computer. Verify that the packets sent from the remote computer are the same as those received by this computer. This error might also indicate interoperability problems with other IPsec implementations.
- 4961: IPsec dropped an inbound packet that failed a replay check. If this problem persists, it could indicate a replay attack against this computer.
- 4962: IPsec dropped an inbound packet that failed a replay check. The inbound packet had too low a sequence number to ensure it was not a replay.
- 4963: IPsec dropped an inbound clear text packet that should have been secured. This is usually due to the remote computer changing its IPsec policy without informing this computer. This could also be a spoofing attack attempt.
- 4965: IPsec received a packet from a remote computer with an incorrect Security Parameter Index (SPI). This is usually caused by malfunctioning hardware that is corrupting packets. If these errors persist, verify that the packets sent from the remote computer are the same as those received by this computer. This error may also indicate interoperability problems with other IPsec implementations. In that case, if connectivity is not impeded, then these events can be ignored.
- 5478: IPsec Services has started successfully.
- 5479: IPsec Services has been shut down successfully. The shutdown of IPsec Services can put the computer at greater risk of network attack or expose the computer to potential security risks.
- 5480: IPsec Services failed to get the complete list of network interfaces on the computer. This poses a potential security risk because some of the network interfaces may not get the protection provided by the applied IPsec filters. Use the IP Security Monitor snap-in to diagnose the problem.
- 5483: IPsec Services failed to initialize RPC server. IPsec Services could not be started.

- 5484: IPsec Services has experienced a critical failure and has been shut down. The shutdown of IPsec Services can put the computer at greater risk of network attack or expose the computer to potential security risks.
- 5485: IPsec Services failed to process some IPsec filters on a plug-and-play event for network interfaces. This poses a potential security risk because some of the network interfaces may not get the protection provided by the applied IPsec filters. Use the IP Security Monitor snap-in to diagnose the problem.

The recommended state for this setting is: Success and Failure.

**Rationale:**

Auditing these events may be useful when investigating a security incident.

**Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:System_AuditIPsecDriver_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 3.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:System_AuditIPsecDriver
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to Success and Failure.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success and Failure:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Audit/System_Audit
          IPsecDriver
Data type: Integer
Value: 3
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

No Auditing.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

## **17.9.2 (L1) Ensure 'Audit Other System Events' is set to 'Success and Failure' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This subcategory reports on other system events. Events for this subcategory include:

- 5024 : The Windows Firewall Service has started successfully.
- 5025 : The Windows Firewall Service has been stopped.
- 5027 : The Windows Firewall Service was unable to retrieve the security policy from the local storage. The service will continue enforcing the current policy.
- 5028 : The Windows Firewall Service was unable to parse the new security policy. The service will continue with currently enforced policy.
- 5029: The Windows Firewall Service failed to initialize the driver. The service will continue to enforce the current policy.
- 5030: The Windows Firewall Service failed to start.
- 5032: Windows Firewall was unable to notify the user that it blocked an application from accepting incoming connections on the network.
- 5033 : The Windows Firewall Driver has started successfully.
- 5034 : The Windows Firewall Driver has been stopped.
- 5035 : The Windows Firewall Driver failed to start.
- 5037 : The Windows Firewall Driver detected critical runtime error. Terminating.
- 5058: Key file operation.
- 5059: Key migration operation.

The recommended state for this setting is: Success and Failure.

### **Rationale:**

Capturing these audit events may be useful for identifying when the Windows Firewall is not performing as expected.

## **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:System\_AuditOtherSystemEvents\_ProviderSet

### **To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 3.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:System\_AuditOtherSystemEvents

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to Success and Failure.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success and Failure:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Audit/System_Audit OtherSystemEvents
Data type:	Integer
Value:	3

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Success and Failure.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

### **17.9.3 (L1) Ensure 'Audit Security State Change' is set to include 'Success' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This subcategory reports changes in security state of the system, such as when the security subsystem starts and stops. Events for this subcategory include:

- 4608: Windows is starting up.
- 4609: Windows is shutting down.
- 4616: The system time was changed.
- 4621: Administrator recovered system from CrashOnAuditFail. Users who are not administrators will now be allowed to log on. Some audit-able activity might not have been recorded.

The recommended state for this setting is to include: Success.

#### **Rationale:**

Auditing these events may be useful when investigating a security incident.

#### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:System\_AuditSecuritySystemExtension\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:System\_AuditSecuritySystemExtension

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to include Success.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to include Success:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Audit/System_Audit
          SecurityStateChange
Data type: Integer
Value: 3
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Success.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

#### **17.9.4 (L1) Ensure 'Audit Security System Extension' is set to include 'Success' (Automated)**

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

This subcategory reports the loading of extension code such as authentication packages by the security subsystem. Events for this subcategory include:

- 4610: An authentication package has been loaded by the Local Security Authority.
- 4611: A trusted logon process has been registered with the Local Security Authority.
- 4614: A notification package has been loaded by the Security Account Manager.
- 4622: A security package has been loaded by the Local Security Authority.
- 4697: A service was installed in the system.

The recommended state for this setting is to include: Success.

##### **Rationale:**

Auditing these events may be useful when investigating a security incident.

##### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:System_AuditSecuritySystemExtension_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:System_AuditSecuritySystemExtension
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Confirm that the audit setting is set to include Success.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to include Success:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Audit/System_Audit SecuritySystemExtension
Data type:	Integer
Value:	1

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

No Auditing.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

## **17.9.5 (L1) Ensure 'Audit System Integrity' is set to 'Success and Failure' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This subcategory reports on violations of integrity of the security subsystem. Events for this subcategory include:

- 4612 : Internal resources allocated for the queuing of audit messages have been exhausted, leading to the loss of some audits.
- 4615 : Invalid use of LPC port.
- 4618 : A monitored security event pattern has occurred.
- 4816 : RPC detected an integrity violation while decrypting an incoming message.
- 5038 : Code integrity determined that the image hash of a file is not valid. The file could be corrupt due to unauthorized modification or the invalid hash could indicate a potential disk device error.
- 5056: A cryptographic self test was performed.
- 5057: A cryptographic primitive operation failed.
- 5060: Verification operation failed.
- 5061: Cryptographic operation.
- 5062: A kernel-mode cryptographic self test was performed.

The recommended state for this setting is: Success and Failure.

### **Rationale:**

Auditing these events may be useful when investigating a security incident.

### **Impact:**

If no audit settings are configured, or if audit settings are too lax on the computers in your organization, security incidents might not be detected or not enough evidence will be available for network forensic analysis after security incidents occur. However, if audit settings are too severe, critically important entries in the Security log may be obscured by all of the meaningless entries and computer performance and the available amount of data storage may be seriously affected. Companies that operate in certain regulated industries may have legal obligations to log certain events or activities.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Audit:System_AuditSystemIntegrity_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 3.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\default\Device\Audit:System_AuditSystemIntegrity
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Confirm that the audit setting is set to Success and Failure.

- *Open* an elevated command prompt (as Administrator)
- *Run* AuditPol.exe /get /category:\*
- *Find* the corresponding setting and make sure it is set as prescribed

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Success and Failure:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Enter a *Name*
- Click *Add*
- Enter the *Details* below

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Audit/System_Audit
          SystemIntegrity
Data type: Integer
Value: 3
```

- Select *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Success and Failure.

## **CIS Controls:**

Version 7

### **6.3 Enable Detailed Logging**

Enable system logging to include detailed information such as an event source, date, user, timestamp, source addresses, destination addresses, and other useful elements.

## **18 Administrative Templates (Computer)**

This section contains computer-based recommendations from Group Policy Administrative Templates (ADMX).

### **18.1 Control Panel**

This section contains recommendations for Intune Control Panel settings.

#### **18.1.1 Personalization**

This section contains recommendations for Intune Control Panel Personalization settings.

##### *18.1.1.1 (L1) Ensure 'Prevent enabling lock screen camera' is set to 'Enabled' (Automated)*

###### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

###### **Description:**

Disables the lock screen camera toggle switch in PC Settings and prevents a camera from being invoked on the lock screen.

The recommended state for this setting is: Enabled.

###### **Rationale:**

Disabling the lock screen camera extends the protection afforded by the lock screen to camera features.

###### **Impact:**

If you enable this setting, users will no longer be able to enable or disable lock screen camera access in PC Settings, and the camera cannot be invoked on the lock screen.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeviceLock  
:PreventEnablingLockScreenCamera_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
DeviceLock:PreventLockScreenCamera
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\Personalization:NoLock  
ScreenCamera
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Enter a *Name*
- Configure the following *setting*

Computer Configuration\Control Panel\Personalization\Prevent enabling lock screen camera

- Select *Next*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users can enable invocation of an available camera on the lock screen.)

## **CIS Controls:**

Version 7

### **16.11 Lock Workstation Sessions After Inactivity**

Automatically lock workstation sessions after a standard period of inactivity.

**18.1.1.2 (L1) Ensure 'Prevent enabling lock screen slide show' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

Disables the lock screen slide show settings in PC Settings and prevents a slide show from playing on the lock screen.

The recommended state for this setting is: Enabled.

**Rationale:**

Disabling the lock screen slide show extends the protection afforded by the lock screen to slide show contents.

**Impact:**

If you enable this setting, users will no longer be able to modify slide show settings in PC Settings, and no slide show will ever start.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeviceLock  
:PreventLockScreenSlideShow_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
DeviceLock:PreventLockScreenSlideShow
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\Personalization:NoLock  
ScreenSlideshow
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Enter a *Name*
- Configure the following *setting*

Computer Configuration\Control Panel\Personalization\Prevent enabling lock screen slide show

- Select *Next*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users can enable a slide show that will run after they lock the machine.)

## **CIS Controls:**

Version 7

### **16.11 Lock Workstation Sessions After Inactivity**

Automatically lock workstation sessions after a standard period of inactivity.

## ***18.1.2 Regional and Language Options***

This section contains recommendation settings for Regional and Language Options.

This Group Policy section is provided by the Group Policy template `Globalization.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.1.2.1 Handwriting personalization***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

**18.1.2.2 (L1) Ensure 'Allow users to enable online speech recognition services' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy enables the automatic learning component of input personalization that includes speech, inking, and typing. Automatic learning enables the collection of speech and handwriting patterns, typing history, contacts, and recent calendar information. It is required for the use of Cortana. Some of this collected information may be stored on the user's OneDrive, in the case of inking and typing; some of the information will be uploaded to Microsoft to personalize speech.

The recommended state for this setting is: Disabled.

**Rationale:**

If this setting is Enabled sensitive information could be stored in the cloud or sent to Microsoft.

**Impact:**

Automatic learning of speech, inking, and typing stops and users cannot change its value via PC Settings.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Privacy:AllowInputPersonalization\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Privacy:AllowInputPersonalization

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Privacy/Allow
          InputPersonalization
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (Automatic learning of speech, inking and typing is enabled, but users may change this value via PC Settings.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

### **18.1.3 (L2) Ensure 'Allow Online Tips' is set to 'Disabled' (Automated)**

#### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

#### **Description:**

This policy setting configures the retrieval of online tips and help for the Settings app.

The recommended state for this setting is: Disabled.

#### **Rationale:**

Due to privacy concerns, data should never be sent to any 3rd party since this data could contain sensitive information.

#### **Impact:**

Settings will not contact Microsoft content services to retrieve tips and help content.

#### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Settings:AllowOnlineTips\_ProviderSet

#### **To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\Settings:AllowOnlineTips

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Settings/AllowOnlineTips
Data type:	Integer
Value:	0

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (Settings will contact Microsoft content services to retrieve tips and help content.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.2 LAPS**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `AdmPwd.admx/adml` that is included with LAPS.

## **18.3 MS Security Guide**

This section contains settings for configuring additional settings from the MS Security Guide.

This Group Policy section is provided by the Group Policy template `SecGuide.admx/adml` that is available from Microsoft at [this link](#).

### ***18.3.1 (L1) Ensure 'Apply UAC restrictions to local accounts on network logons' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This setting controls whether local accounts can be used for remote administration via network logon (e.g., NET USE, connecting to C\$, etc.). Local accounts are at high risk for credential theft when the same account and password is configured on multiple systems. Enabling this policy significantly reduces that risk.

**Enabled:** Applies UAC token-filtering to local accounts on network logons. Membership in powerful group such as Administrators is disabled and powerful privileges are removed from the resulting access token. This configures the `LocalAccountTokenFilterPolicy` registry value to 0. This is the default behavior for Windows.

**Disabled:** Allows local accounts to have full administrative rights when authenticating via network logon, by configuring the `LocalAccountTokenFilterPolicy` registry value to 1.

For more information about local accounts and credential theft, review the "[Mitigating Pass-the-Hash \(PtH\) Attacks and Other Credential Theft Techniques](#)" documents.

For more information about `LocalAccountTokenFilterPolicy`, see Microsoft Knowledge Base article 951016: [Description of User Account Control and remote restrictions in Windows Vista](#).

The recommended state for this setting is: Enabled.

### **Rationale:**

Local accounts are at high risk for credential theft when the same account and password is configured on multiple systems. Ensuring this policy is Enabled significantly reduces that risk.

### **Impact:**

None - this is the default behavior.

### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\MSSecurityGuide:ApplyUACRestrictionsToLocalAccountsOnNetworkLogon\_ProviderSet

### **To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\MSSecurityGuide:ApplyUACRestrictionsToLocalAccountsOnNetworkLogon\_LastWrite

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:LocalAccountTokenFilterPolicy

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/MS Security Guide
Setting Name:	Apply UAC restrictions to local accounts on network logons
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (UAC token-filtering is applied to local accounts on network logons. Membership in powerful groups such as Administrators and disabled and powerful privileges are removed from the resulting access token.)

## **CIS Controls:**

Version 7

### **4.3 Ensure the Use of Dedicated Administrative Accounts**

Ensure that all users with administrative account access use a dedicated or secondary account for elevated activities. This account should only be used for administrative activities and not internet browsing, email, or similar activities.

## **18.3.2 (L1) Ensure 'Configure SMB v1 client driver' is set to 'Enabled: Disable driver (recommended)' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This setting configures the start type for the Server Message Block version 1 (SMBv1) client driver service (`MRxSmb10`), which is recommended to be disabled.

The recommended state for this setting is: Enabled: Disable driver (recommended).

**Note:** Do not, *under any circumstances*, configure this overall setting as Disabled, as doing so will delete the underlying registry entry altogether, which will cause serious problems.

### **Rationale:**

Since September 2016, Microsoft has strongly encouraged that SMBv1 be disabled and no longer used on modern networks, as it is a 30 year old design that is much more vulnerable to attacks than much newer designs such as SMBv2 and SMBv3.

More information on this can be found at the following links:

[Stop using SMB1 | Storage at Microsoft](#)

[Disable SMB v1 in Managed Environments with Group Policy – "Stay Safe" Cyber Security Blog](#)

[Disabling SMBv1 through Group Policy – Microsoft Security Guidance blog](#)

### **Impact:**

Some legacy OSes (e.g. Windows XP, Server 2003 or older), applications and appliances may no longer be able to communicate with the system once SMBv1 is disabled. We recommend careful testing be performed to determine the impact prior to configuring this as a widespread control, and where possible, remediate any incompatibilities found with the vendor of the incompatible system. Microsoft is also maintaining a thorough (although not comprehensive) list of known SMBv1 incompatibilities at this link: [SMB1 Product Clearinghouse | Storage at Microsoft](#)

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\MSSecurityGuide:ConfigureSMBV1ClientDriver\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="Pol\_SecGuide\_SMB1ClientDriver" value="4" />.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\MSSecurityGuide:ConfigureSMBV1ClientDriver

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 4.

HKEY\_LOCAL\_MACHINE\SYSTEM\CurrentControlSet\Services\MrxSmb10:Start

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Disable driver (recommended):

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/MS Security Guide
Setting Name:	Configure SMB v1 client driver
Configuration:	Enabled; Disable driver (recommended)

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Windows 7 and Windows 8.0: Enabled: Manual start.

Windows 8.1 and Windows 10 (up to R1703): Enabled: Automatic start.

Windows 10 R1709 and newer: Enabled: Disable driver.

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

### **14.3 Disable Workstation to Workstation Communication**

Disable all workstation to workstation communication to limit an attacker's ability to move laterally and compromise neighboring systems, through technologies such as Private VLANs or microsegmentation.

### **18.3.3 (L1) Ensure 'Configure SMB v1 server' is set to 'Disabled' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This setting configures the server-side processing of the Server Message Block version 1 (SMBv1) protocol.

The recommended state for this setting is: Disabled.

#### **Rationale:**

Since September 2016, Microsoft has strongly encouraged that SMBv1 be disabled and no longer used on modern networks, as it is a 30 year old design that is much more vulnerable to attacks than much newer designs such as SMBv2 and SMBv3.

More information on this can be found at the following links:

[Stop using SMB1 | Storage at Microsoft](#)

[Disable SMB v1 in Managed Environments with Group Policy – "Stay Safe" Cyber Security Blog](#)

[Disabling SMBv1 through Group Policy – Microsoft Security Guidance blog](#)

#### **Impact:**

Some legacy OSes (e.g. Windows XP, Server 2003 or older), applications and appliances may no longer be able to communicate with the system once SMBv1 is disabled. We recommend careful testing be performed to determine the impact prior to configuring this as a widespread control, and where possible, remediate any incompatibilities found with the vendor of the incompatible system. Microsoft is also maintaining a thorough (although not comprehensive) list of known SMBv1 incompatibilities at this link: [SMB1 Product Clearinghouse | Storage at Microsoft](#)

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\MSSecurityGuide:ConfigureSMBV1Server\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\MSSecurityGuide:ConfigureSMBV1Server

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SYSTEM\CurrentControlSet\Services\LanmanServer\Parameters:SMB1

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/MS Security Guide
Setting Name:	Configure SMB v1 server
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Windows 10 R1703 and older: Enabled.

Windows 10 R1709 and newer: Disabled.

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

#### **14.3 Disable Workstation to Workstation Communication**

Disable all workstation to workstation communication to limit an attacker's ability to move laterally and compromise neighboring systems, through technologies such as Private VLANs or microsegmentation.

#### **18.3.4 (L1) Ensure 'Enable Structured Exception Handling Overwrite Protection (SEHOP)' is set to 'Enabled' (Automated)**

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

Windows includes support for Structured Exception Handling Overwrite Protection (SEHOP). We recommend enabling this feature to improve the security profile of the computer.

The recommended state for this setting is: Enabled.

##### **Rationale:**

This feature is designed to block exploits that use the Structured Exception Handler (SEH) overwrite technique. This protection mechanism is provided at run-time. Therefore, it helps protect applications regardless of whether they have been compiled with the latest improvements, such as the /SAFESEH option.

##### **Impact:**

After you enable SEHOP, existing versions of Cygwin, Skype, and Armadillo-protected applications may not work correctly.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\MSSecurityGuide:EnableStructuredExceptionHandlingOverwriteProtection\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\MSSecurityGuide:EnableStructuredExceptionHandlingOverwriteProtection

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SYSTEM\CurrentControlSet\Control\SessionManager\kernel:DisableExceptionChainValidation

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/MS Security Guide
Setting Name:	Enable Structured Exception Handling Overwrite Protection (SEHOP)
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled for 32-bit processes.

## **CIS Controls:**

Version 7

### 8.3 Enable Operating System Anti-Exploitation Features/ Deploy Anti-Exploit Technologies

Enable anti-exploitation features such as Data Execution Prevention (DEP) or Address Space Layout Randomization (ASLR) that are available in an operating system or deploy appropriate toolkits that can be configured to apply protection to a broader set of applications and executables.

### **18.3.5 (L1) Ensure 'WDigest Authentication' is set to 'Disabled' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

When WDigest authentication is enabled, Lsass.exe retains a copy of the user's plaintext password in memory, where it can be at risk of theft. If this setting is not configured, WDigest authentication is disabled in Windows 8.1 and in Windows Server 2012 R2; it is enabled by default in earlier versions of Windows and Windows Server.

For more information about local accounts and credential theft, review the "[Mitigating Pass-the-Hash \(PtH\) Attacks and Other Credential Theft Techniques](#)" documents.

For more information about `UseLogonCredential`, see Microsoft Knowledge Base article 2871997: [Microsoft Security Advisory Update to improve credentials protection and management May 13, 2014](#).

The recommended state for this setting is: Disabled.

#### **Rationale:**

Preventing the plaintext storage of credentials in memory may reduce opportunity for credential theft.

#### **Impact:**

None - this is also the default configuration for Windows 8.1 and newer.

**Audit:**

Navigate to the following registry location and confirm it is set to 2. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\MSSecurityGuide:WDigestAuthentication\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to <disabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\MSSecurityGuide:WDigestAuthentication

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following local group policy location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SYSTEM\CurrentControlSet\Control\SecurityProviders\WDigest:UseLogonCredential

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Enter the *Details* below

Path:	Computer Configuration/MS Security Guide
Setting Name:	WDigest Authentication (disabling may require KB2871997)
Setting:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

On Windows 8.0 and older: Enabled. (Lsass.exe retains a copy of the user's plaintext password in memory, where it is at risk of theft.)

On Windows 8.1 and newer: Disabled. (Lsass.exe does not retain a copy of the user's plaintext password in memory.)

## **CIS Controls:**

Version 7

### **16.4 Encrypt or Hash all Authentication Credentials**

Encrypt or hash with a salt all authentication credentials when stored.

## **18.4 MSS (Legacy)**

This section contains recommendations for the Microsoft Solutions for Security (MSS) settings.

This Group Policy section is provided by the Group Policy template `MSS-legacy.admx/adml` that is available from this TechNet blog post: [The MSS settings – Microsoft Security Guidance blog](#)

*18.4.1 (L1) Ensure 'MSS: (DisableIPSourceRouting IPv6) IP source routing protection level (protects against packet spoofing)' is set to 'Enabled: Highest protection, source routing is completely disabled' (Automated)*

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

IP source routing is a mechanism that allows the sender to determine the IP route that a datagram should follow through the network.

The recommended state for this setting is: Enabled: Highest protection, source routing is completely disabled.

### **Rationale:**

An attacker could use source routed packets to obscure their identity and location. Source routing allows a computer that sends a packet to specify the route that the packet takes.

### **Impact:**

All incoming source routed packets will be dropped.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\MSSLegacy:  
IPv6SourceRoutingProtectionLevel_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="DisableIPSourceRoutingIPv6" value="2" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
MSSLegacy:IPv6SourceRoutingProtectionLevel
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 2.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\Tcpip6\Parameters:Disabl  
eIPSourceRouting
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Highest protection, source routing is completely disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/MSS (Legacy)
Setting Name:	MSS: (DisableIPSourceRouting IPv6) IP source routing protection level (protects against packet spoofing)
Configuration:	Enabled: Highest protection, source routing is completely disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

No additional protection, source routed packets are allowed.

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

*18.4.2 (L1) Ensure 'MSS: (DisableIPSourceRouting) IP source routing protection level (protects against packet spoofing)' is set to 'Enabled: Highest protection, source routing is completely disabled' (Automated)*

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

IP source routing is a mechanism that allows the sender to determine the IP route that a datagram should take through the network. It is recommended to configure this setting to Not Defined for enterprise environments and to Highest Protection for high security environments to completely disable source routing.

The recommended state for this setting is: Enabled: Highest protection, source routing is completely disabled.

**Rationale:**

An attacker could use source routed packets to obscure their identity and location. Source routing allows a computer that sends a packet to specify the route that the packet takes.

**Impact:**

All incoming source routed packets will be dropped.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\MSSLegacy:  
IPSourceRoutingProtectionLevel_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="DisableIPSourceRouting" value="2" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
MSSLegacy:SourceRoutingProtectionLevel
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 2.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\Tcpip\Parameters:Disable  
IPSourceRouting
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Highest protection, source routing is completely disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/MSS (Legacy)
Setting Name:	MSS: (DisableIPSourceRouting) IP source routing protection level (protects against packet spoofing)
Configuration:	Enabled: Highest protection, source routing is completely disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Medium, source routed packets ignored when IP forwarding is enabled.

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

**18.4.3 (L1) Ensure 'MSS: (EnableICMPRedirect) Allow ICMP redirects to override OSPF generated routes' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

Internet Control Message Protocol (ICMP) redirects cause the IPv4 stack to plumb host routes. These routes override the Open Shortest Path First (OSPF) generated routes.

The recommended state for this setting is: Disabled.

**Rationale:**

This behavior is expected. The problem is that the 10 minute time-out period for the ICMP redirect-plumbed routes temporarily creates a network situation in which traffic will no longer be routed properly for the affected host. Ignoring such ICMP redirects will limit the system's exposure to attacks that will impact its ability to participate on the network.

**Impact:**

When Routing and Remote Access Service (RRAS) is configured as an autonomous system boundary router (ASBR), it does not correctly import connected interface subnet routes. Instead, this router injects host routes into the OSPF routes. However, the OSPF router cannot be used as an ASBR router, and when connected interface subnet routes are imported into OSPF the result is confusing routing tables with strange routing paths.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\MSSLegacy:  
AllowTheComputerToIgnoreNetBIOSNameReleaseRequestsExceptFromWINServers_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
MSSLegacy:AllowICMPRedirectsToOverrideGeneratedRoute
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\Tcpip\Parameters:EnableICMPRedirect
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/MSS (Legacy)
Setting Name:	MSS: (EnableICMPRedirect) Allow ICMP redirects to override OSPF generated routes
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (ICMP redirects can override OSPF-generated routes.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

**18.4.4 (L1) Ensure 'MSS: (NoNameReleaseOnDemand) Allow the computer to ignore NetBIOS name release requests except from WINS servers' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

NetBIOS over TCP/IP is a network protocol that among other things provides a way to easily resolve NetBIOS names that are registered on Windows-based systems to the IP addresses that are configured on those systems. This setting determines whether the computer releases its NetBIOS name when it receives a name-release request.

The recommended state for this setting is: Enabled.

**Rationale:**

The NetBT protocol is designed not to use authentication, and is therefore vulnerable to spoofing. Spoofing makes a transmission appear to come from a user other than the user who performed the action. A malicious user could exploit the unauthenticated nature of the protocol to send a name-conflict datagram to a target computer, which would cause the computer to relinquish its name and not respond to queries.

An attacker could send a request over the network and query a computer to release its NetBIOS name. As with any change that could affect applications, it is recommended that you test this change in a non-production environment before you change the production environment.

The result of such an attack could be to cause intermittent connectivity issues on the target computer, or even to prevent the use of Network Neighborhood, domain logons, the NET SEND command, or additional NetBIOS name resolution.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\MSSLegacy:  
AllowTheComputerToIgnoreNetBIOSNameReleaseRequestsExceptFromWINServers_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
MSSLegacy:AllowTheComputerToIgnoreNetBIOSNameReleaseRequestsExceptFromWINServers
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\NetBT\Parameters:NoNameReleaseOnDemand
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/MSS (Legacy)
Setting Name:	MSS: (NoNameReleaseOnDemand) Allow the computer to ignore NetBIOS name release requests except from WINS servers
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled.

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.5 Network**

This section contains recommendations for network settings.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.5.1 Background Intelligent Transfer Service (BITS)***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Bits.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.5.2 BranchCache***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `PeerToPeerCaching.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

### ***18.5.3 DirectAccess Client Experience Settings***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `nca.admx/adml` that is included with the Microsoft 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

### ***18.5.4 DNS Client***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `DnsClient.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.5.5 Fonts**

This section contains recommendations related to Fonts.

This Group Policy section is provided by the Group Policy template `GroupPolicy.admx/adml` that is included with the Microsoft Windows 10 Release 1607 & Server 2016 Administrative Templates (or newer).

### ***18.5.5.1 (L2) Ensure 'Enable Font Providers' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

#### **Description:**

This policy setting determines whether Windows is allowed to download fonts and font catalog data from an online font provider.

The recommended state for this setting is: Disabled.

#### **Rationale:**

In an enterprise managed environment the IT department should be managing the changes to the system configuration, to ensure all changes are tested and approved.

#### **Impact:**

Windows will not connect to an online font provider and will only enumerate locally-installed fonts.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\System:AllowFontProviders\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\System:AllowFontProviders

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to 'Disabled':

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/System/AllowFontProviders
Data type:	Integer
Value:	0

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (Fonts that are included in Windows but that are not stored locally will be downloaded on demand from an online font provider.)

## **CIS Controls:**

Version 7

### **18.4 Only Use Up-to-date And Trusted Third-Party Components**

Only use up-to-date and trusted third-party components for the software developed by the organization.

## **18.5.6 Hotspot Authentication**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `hotspotauth.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

## **18.5.7 Lanman Server**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `LanmanServer.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

## **18.5.8 Lanman Workstation**

This section contains recommendations related to Lanman Workstation.

This Group Policy section is provided by the Group Policy template `LanmanWorkstation.admx/adml` that is included with the Microsoft Windows 10 RTM (Release 1507) Administrative Templates (or newer).

### ***18.5.8.1 (L1) Ensure 'Enable insecure guest logons' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting determines if the SMB client will allow insecure guest logons to an SMB server.

The recommended state for this setting is: Disabled.

#### **Rationale:**

Insecure guest logons are used by file servers to allow unauthenticated access to shared folders.

#### **Impact:**

The SMB client will reject insecure guest logons. This was not originally the default behavior in older versions of Windows, but Microsoft changed the default behavior starting with Windows 10 R1709: [Guest access in SMB2 disabled by default in Windows 10 and Windows Server 2016](#)

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\LanmanWorkstation:EnableInsecureGuestLogons\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\LanmanWorkstation:EnableInsecureGuestLogons

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Block:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Endpoint protection/Local device security options/Network access and security
Setting Name:	Insecure Guest Logons
Configuration:	Block

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Windows 10 R1703 and older: Enabled. (The SMB client will allow insecure guest logons.)

Windows 10 R1709 and newer: Disabled. (The SMB client will reject insecure guest logons.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

### **18.5.9 Link-Layer Topology Discovery**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `LinkLayerTopologyDiscovery.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.5.10 Microsoft Peer-to-Peer Networking Services**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `P2P-pnrp.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.5.11 Network Connections**

This section contains recommendations for Network Connections settings.

This Group Policy section is provided by the Group Policy template `NetworkConnections.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.5.11.1 Windows Defender Firewall (formerly Windows Firewall)**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsFirewall.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

**Note:** This section was initially named *Windows Firewall* but was renamed by Microsoft to *Windows Defender Firewall* starting with the Microsoft Windows 10 Release 1709 Administrative Templates.

#### *18.5.11.2 (L1) Ensure 'Prohibit installation and configuration of Network Bridge on your DNS domain network' is set to 'Enabled' (Automated)*

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

You can use this procedure to controls user's ability to install and configure a Network Bridge.

The recommended state for this setting is: Enabled.

### **Rationale:**

The Network Bridge setting, if enabled, allows users to create a Layer 2 Media Access Control (MAC) bridge, enabling them to connect two or more physical network segments together. A Network Bridge thus allows a computer that has connections to two different networks to share data between those networks.

In an enterprise managed environment, where there is a need to control network traffic to only authorized paths, allowing users to create a Network Bridge increases the risk and attack surface from the bridged network.

### **Impact:**

Users cannot create or configure a Network Bridge.

### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Connectivity:ProhibitInstallationAndConfigurationOfNetworkBridge\_ProviderSet

### **To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Connectivity:ProhibitInstallationAndConfigurationOfNetworkBridge

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\NetworkConnections:NC\_AllowNetBridge\_NLA

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Network/Network Connections
Setting Name:	Prohibit installation and configuration of Network Bridge on your DNS domain network
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users are able create and modify the configuration of Network Bridges. Membership in the local Administrators group, or equivalent, is the minimum required to complete this procedure.)

## **CIS Controls:**

Version 7

### **11.3 Use Automated Tools to Verify Standard Device Configurations and Detect Changes**

Compare all network device configuration against approved security configurations defined for each network device in use and alert when any deviations are discovered.

### **18.5.11.3 (L1) Ensure 'Prohibit use of Internet Connection Sharing on your DNS domain network' is set to 'Enabled' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

Although this "legacy" setting traditionally applied to the use of Internet Connection Sharing (ICS) in Windows 2000, Windows XP & Server 2003, this setting now freshly applies to the Mobile Hotspot feature in Windows 10 & Server 2016.

The recommended state for this setting is: Enabled.

#### **Rationale:**

Non-administrators should not be able to turn on the Mobile Hotspot feature and open their Internet connectivity up to nearby mobile devices.

#### **Impact:**

Mobile Hotspot cannot be enabled or configured by Administrators and non-Administrators alike.

#### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Wifi:AllowInternetSharing\_ProviderSet

#### **To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Wifi:AllowInternetSharing

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Wifi/AllowInternetSharing
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (All users are allowed to turn on Mobile Hotspot.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.5.12 Network Connectivity Status Indicator**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `NCSI.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.5.13 Network Isolation**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `NetworkIsolation.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

## **18.5.14 Network Provider**

This section contains recommendations for Network Provider settings.

This Group Policy section is provided by the Group Policy template `NetworkProvider.admx/adml` that is included with the [MS15-011](#) / [MSKB 3000483](#) security update and the Microsoft Windows 10 RTM (Release 1507) Administrative Templates (or newer).

*18.5.14.1 (L1) Ensure 'Hardened UNC Paths' is set to 'Enabled, with "Require Mutual Authentication" and "Require Integrity" set for all NETLOGON and SYSVOL shares' (Automated)*

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting configures secure access to UNC paths.

The recommended state for this setting is: Enabled, with "Require Mutual Authentication" and "Require Integrity" set for all NETLOGON and SYSVOL shares.

**Note:** If the environment exclusively contains Windows 8.0 / Server 2012 (non-R2) or newer systems, then the "Privacy" setting may (optionally) also be set to enable SMB encryption. However, using SMB encryption will render the targeted share paths completely inaccessible by older OSes, so only use this additional option with caution and thorough testing.

### **Rationale:**

In February 2015, Microsoft released a new control mechanism to mitigate a security risk in Group Policy as part of the [MS15-011](#) / [MSKB 3000483](#) security update. This mechanism requires both the installation of the new security update and also the deployment of specific group policy settings to all computers on the domain from Windows Vista / Server 2008 (non-R2) or newer (the associated security patch to enable this feature was not released for Server 2003). A new group policy template (`NetworkProvider.admx/adml`) was also provided with the security update.

Once the new GPO template is in place, the following are the minimum requirements to remediate the Group Policy security risk:

```
\*\NETLOGON RequireMutualAuthentication=1, RequireIntegrity=1
```

```
\*\SYSVOL RequireMutualAuthentication=1, RequireIntegrity=1
```

**Note:** A reboot may be required after the setting is applied to a client machine to access the above paths.

Additional guidance on the deployment of this security setting is available from the Microsoft Premier Field Engineering (PFE) Platforms TechNet Blog here: [Guidance on Deployment of MS15-011 and MS15-014](#).

### **Impact:**

Windows only allows access to the specified UNC paths after fulfilling additional security requirements.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Connectivity:HardenedUNCPaths_ProviderSet
```

## **To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="Pol\_HardenedPaths" value="\\*\NETLOGON 1 \\*\SYSVOL 1" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Connectivity:HardenedUNCPaths
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\NetworkProvider\HardenedPaths:\*\NETLOGON  
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\NetworkProvider\HardenedPaths:\*\SYSVOL
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Path: Computer Configuration/Network/Network Provider
Setting Name: Hardened UNC Paths
Configuration: Enabled: \\*\NETLOGON RequireMutualAuthentication=1,
                RequireIntegrity=1 and \\*\SYSVOL RequireMutual
                Authentication=1, RequireIntegrity=1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (No UNC paths are hardened.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **18.5.15 Offline Files**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `OfflineFiles.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.5.16 QoS Packet Scheduler**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `QOS.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.5.17 SNMP**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Snmp.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.5.18 SSL Configuration Settings**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `CipherSuiteOrder.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.5.19 TCP/IP Settings**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `tcpip.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

## **18.5.20 Windows Connect Now**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsConnectNow.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.5.21 Windows Connection Manager**

This section contains recommendations for Windows Connection Manager settings.

This Group Policy section is provided by the Group Policy template `wcm.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

### ***18.5.21.1 (L1) Ensure 'Prohibit connection to non-domain networks when connected to domain authenticated network' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting prevents computers from connecting to both a domain based network and a non-domain based network at the same time.

The recommended state for this setting is: Enabled.

#### **Rationale:**

The potential concern is that a user would unknowingly allow network traffic to flow between the insecure public network and the enterprise managed network.

#### **Impact:**

The computer responds to automatic and manual network connection attempts based on the following circumstances:

*Automatic connection attempts* - When the computer is already connected to a domain based network, all automatic connection attempts to non-domain networks are blocked. - When the computer is already connected to a non-domain based network, automatic connection attempts to domain based networks are blocked.

*Manual connection attempts* - When the computer is already connected to either a non-domain based network or a domain based network over media other than Ethernet, and a user attempts to create a manual connection to an additional network in violation of this policy setting, the existing network connection is disconnected and the manual connection is allowed. - When the computer is already connected to either a non-domain based network or a domain based network over Ethernet, and a user attempts to create a manual connection to an additional network in violation of this policy setting, the existing Ethernet connection is maintained and the manual connection attempt is blocked.

### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Windows  
ConnectionManager:ProhibitConnectionToNonDomainNetworksWhenConnectedToDomainAuthenticatedNetwork_ProviderSet
```

### **To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
Windows ConnectionManager:  
ProhibitConnectionToNonDomainNetworksWhenConnectedToDomainAuthenticatedNetwork
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\WcmSvc\GroupPolicy:fBl  
ockNonDomain
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Network/Windows Connection Manager
Setting Name:	Prohibit connection to non-domain networks when connected to domain authenticated network
Setting:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Connections to both domain and non-domain networks are simultaneously allowed.)

## **CIS Controls:**

Version 7

### **12.4 Deny Communication over Unauthorized Ports**

Deny communication over unauthorized TCP or UDP ports or application traffic to ensure that only authorized protocols are allowed to cross the network boundary in or out of the network at each of the organization's network boundaries.

## **18.5.22 Wireless Display**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `wlansvc.admx/adml` that is included with the Microsoft Windows 10 Release 1511 Administrative Templates (or newer).

## **18.5.23 WLAN Service**

This section contains recommendations for WLAN Service settings.

This Group Policy section is provided by the Group Policy template `wlansvc.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

### **18.5.23.1 WLAN Media Cost**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `wlansvc.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

## **18.5.23.2 WLAN Settings**

This setting contains recommendations for WLAN Settings.

This Group Policy section is provided by the Group Policy template `wlansvc.admx/adml` that is included with the Microsoft Windows 10 Release 1511 Administrative Templates (or newer).

*18.5.23.2.1 (L1) Ensure 'Allow Windows to automatically connect to suggested open hotspots, to networks shared by contacts, and to hotspots offering paid services' is set to 'Disabled' (Automated)*

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting determines whether users can enable the following WLAN settings: "Connect to suggested open hotspots," "Connect to networks shared by my contacts," and "Enable paid services".

- "Connect to suggested open hotspots" enables Windows to automatically connect users to open hotspots it knows about by crowdsourcing networks that other people using Windows have connected to.
- "Connect to networks shared by my contacts" enables Windows to automatically connect to networks that the user's contacts have shared with them, and enables users on this device to share networks with their contacts.
- "Enable paid services" enables Windows to temporarily connect to open hotspots to determine if paid services are available.

The recommended state for this setting is: Disabled.

**Note:** These features are also known by the name "*Wi-Fi Sense*".

### **Rationale:**

Automatically connecting to an open hotspot or network can introduce the system to a rogue network with malicious intent.

**Impact:**

*Connect to suggested open hotspots, Connect to networks shared by my contacts, and Enable paid services* will each be turned off and users on the device will be prevented from enabling them.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Wifi:AllowAutoConnectToWiFiSenseHotspots\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Wifi:AllowAutoConnectToWiFiSenseHotspots

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Wifi/AllowAuto
          ConnectToWiFiSenseHotspots
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (Users can choose to enable or disable either "Connect to suggested open hotspots" or "Connect to networks shared by my contacts".)

## **CIS Controls:**

Version 7

### **15.5 Limit Wireless Access on Client Devices**

Configure wireless access on client machines that do have an essential wireless business purpose, to allow access only to authorized wireless networks and to restrict access to other wireless networks.

## ***18.6 Printers***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.7 Start Menu and Taskbar**

This section contains recommendations for Start Menu and Taskbar.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

### **18.7.1 Notifications**

This section contains recommendations for Start Menu and Taskbar Notifications.

This Group Policy section is provided by the Group Policy template `WPN.admx/adml` that is included with the Microsoft 10 Release 1803 Administrative Templates (or newer).

#### *18.7.1.1 (L2) Ensure 'Turn off notifications network usage' is set to 'Enabled' (Automated)*

##### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

##### **Description:**

This policy setting blocks applications from using the network to send notifications to update tiles, tile badges, toast, or raw notifications. This policy setting turns off the connection between Windows and the Windows Push Notification Service (WNS). This policy setting also stops applications from being able to poll application services to update tiles.

The recommended state for this setting is: `Enabled`.

##### **Rationale:**

Windows Push Notification Services (WNS) is a mechanism to receive 3rd-party notifications and updates from the cloud/Internet. In a high security environment, external systems, especially those hosted outside the organization, should be prevented from having an impact on the secure workstations.

## **Impact:**

Applications and system features will not be able receive notifications from the network from WNS or via notification polling APIs.

**Warning:** This policy is designed for zero exhaust. This policy may cause some MDM processes to break because WNS notification is used by the MDM server to send real time tasks to the device, such as remote wipe, unenroll, remote find, and mandatory app installation. When this policy is set to disallow WNS, those real time processes will no longer work and some time-sensitive actions such as remote wipe when the device is stolen or unenrollment when the device is compromised will not work."

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Notifications:DisallowCloudNotification\_ProviderSet

## **To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\Notifications:DisallowCloudNotification

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to 'Enabled':

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name :	<Enter name>
Description :	<Enter Description>
OMA-URI :	./Device/Vendor/MSFT/Policy/Config/Notifications/DisallowCloudNotification
Data type :	Integer
Value :	1

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Disabled.

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.8 System**

This section contains recommendations for System settings.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.8.1 Access-Denied Assistance**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `srm-fci.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

### **18.8.2 App-V**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `appv.admx/adml` that is included with the Microsoft Windows 10 Release 1607 & Server 2016 Administrative Templates (or newer).

### **18.8.3 Audit Process Creation**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `AuditSettings.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

## **18.8.4 Credentials Delegation**

This section contains settings related to Credential Delegation.

This Group Policy section is provided by the Group Policy template `CredSsp.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.8.4.1 (L1) Ensure 'Remote host allows delegation of non-exportable credentials' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

Remote host allows delegation of non-exportable credentials. When using credential delegation, devices provide an exportable version of credentials to the remote host. This exposes users to the risk of credential theft from attackers on the remote host. The Restricted Admin Mode and Windows Defender Remote Credential Guard features are two options to help protect against this risk.

The recommended state for this setting is: Enabled.

**Note:** More detailed information on Windows Defender Remote Credential Guard and how it compares to Restricted Admin Mode can be found at this link: [Protect Remote Desktop credentials with Windows Defender Remote Credential Guard \(Windows 10\) | Microsoft Docs](#)

#### **Rationale:**

*Restricted Admin Mode* was designed to help protect administrator accounts by ensuring that reusable credentials are not stored in memory on remote devices that could potentially be compromised. *Windows Defender Remote Credential Guard* helps you protect your credentials over a Remote Desktop connection by redirecting Kerberos requests back to the device that is requesting the connection. Both features should be enabled and supported, as they reduce the chance of credential theft.

**Impact:**

The host will support the *Restricted Admin Mode* and *Windows Defender Remote Credential Guard* features.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Credential  
sDelegation:RemoteHostAllowsDelegationOfNonExportableCredentials_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
CredentialsDelegation:RemoteHostAllowsDelegationOfNonExportableCredentials
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\CredentialsDelegation:  
AllowProtectedCreds
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Credentials Delegation
Setting Name:	Remote host allows delegation of non-exportable credentials
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.or newer).

## **Default Value:**

Disabled. (*Restricted Admin Mode* and *Windows Defender Remote Credential Guard* are not supported. Users will always need to pass their credentials to the host.)

## **CIS Controls:**

Version 7

### **16.4 Encrypt or Hash all Authentication Credentials**

Encrypt or hash with a salt all authentication credentials when stored.

## **18.8.5 Device Guard**

This section contains Device Guard settings.

This Group Policy section is provided by the Group Policy template `DeviceGuard.admx/adml` that is included with the Microsoft Windows 10 RTM (Release 1507) Administrative Templates (or newer).

### ***18.8.5.1 (NG) Ensure 'Turn On Virtualization Based Security' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) + Next Generation Windows Security (NG)
- Level 1 (L1) + BitLocker (BL) + Next Generation Windows Security (NG)
- Level 2 (L2) + Next Generation Windows Security (NG)
- Level 2 (L2) + BitLocker (BL) + Next Generation Windows Security (NG)
- Next Generation Windows Security (NG) - optional add-on for use in the newest hardware and configuration environments

#### **Description:**

This policy setting specifies whether Virtualization Based Security is enabled. Virtualization Based Security uses the Windows Hypervisor to provide support for security services.

The recommended state for this setting is: Enabled.

**Note:** Virtualization Based Security requires a 64-bit version of Windows with Secure Boot enabled, which in turn requires that Windows was installed with a UEFI BIOS configuration, not a Legacy BIOS configuration. In addition, if running Windows on a virtual machine, the hardware-assisted CPU virtualization feature (Intel VT-x or AMD-V) must be exposed by the host to the guest VM.

More information on system requirements for this feature can be found at [Windows Defender Credential Guard Requirements \(Windows 10\) | Microsoft Docs](#)

**Note #2:** Credential Guard and Device Guard are not currently supported when using Azure IaaS VMs.

## **Rationale:**

Kerberos, NTLM, and Credential manager isolate secrets by using virtualization-based security. Previous versions of Windows stored secrets in the Local Security Authority (LSA). Prior to Windows 10, the LSA stored secrets used by the operating system in its process memory. With Windows Defender Credential Guard enabled, the LSA process in the operating system talks to a new component called the isolated LSA process that stores and protects those secrets. Data stored by the isolated LSA process is protected using virtualization-based security and is not accessible to the rest of the operating system.

## **Impact:**

**Warning:** All drivers on the system must be compatible with this feature or the system may crash. Ensure that this policy setting is only deployed to computers which are known to be compatible.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeviceGuard:EnableVirtualizationBasedSecurity_ProviderSet
```

## **To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\DeviceGuard:EnableVirtualizationBasedSecurity
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/DeviceGuard/Enable
          VirtualizationBasedSecurity
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled.

## **CIS Controls:**

Version 7

### **16.4 Encrypt or Hash all Authentication Credentials**

Encrypt or hash with a salt all authentication credentials when stored.

**18.8.5.2 (NG) Ensure 'Turn On Virtualization Based Security: Select Platform Security Level' is set to 'Secure Boot and DMA Protection' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + Next Generation Windows Security (NG)
- Level 1 (L1) + BitLocker (BL) + Next Generation Windows Security (NG)
- Level 2 (L2) + Next Generation Windows Security (NG)
- Level 2 (L2) + BitLocker (BL) + Next Generation Windows Security (NG)
- Next Generation Windows Security (NG) - optional add-on for use in the newest hardware and configuration environments

**Description:**

This policy setting specifies whether Virtualization Based Security is enabled. Virtualization Based Security uses the Windows Hypervisor to provide support for security services.

The recommended state for this setting is: Secure Boot and DMA Protection.

**Note:** Virtualization Based Security requires a 64-bit version of Windows with Secure Boot enabled, which in turn requires that Windows was installed with a UEFI BIOS configuration, not a Legacy BIOS configuration. In addition, if running Windows on a virtual machine, the hardware-assisted CPU virtualization feature (Intel VT-x or AMD-V) must be exposed by the host to the guest VM.

More information on system requirements for this feature can be found at [Windows Defender Credential Guard Requirements \(Windows 10\) | Microsoft Docs](#)

**Note #2:** Credential Guard and Device Guard are not currently supported when using Azure IaaS VMs.

**Rationale:**

Secure Boot can help reduce the risk of bootloader attacks and in conjunction with DMA protections to help protect data from being scraped from memory.

**Impact:**

**Warning:** All drivers on the system must be compatible with this feature or the system may crash. Ensure that this policy setting is only deployed to computers which are known to be compatible.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeviceGuard:RequirePlatformSecurityFeatures\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 3.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\DeviceGuard:RequirePlatformSecurityFeatures

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Secure Boot and DMA Protection:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/DeviceGuard/Require
          PlatformSecurityFeatures
Data type: Integer
Value: 3
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled.

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

### **18.8.5.3 (NG) Ensure 'Turn On Virtualization Based Security: Credential Guard Configuration' is set to 'Enabled with UEFI lock' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) + Next Generation Windows Security (NG)
- Level 1 (L1) + BitLocker (BL) + Next Generation Windows Security (NG)
- Level 2 (L2) + Next Generation Windows Security (NG)
- Level 2 (L2) + BitLocker (BL) + Next Generation Windows Security (NG)
- Next Generation Windows Security (NG) - optional add-on for use in the newest hardware and configuration environments

#### **Description:**

This setting lets users turn on Credential Guard with virtualization-based security to help protect credentials. The "Enabled with UEFI lock" option ensures that Credential Guard cannot be disabled remotely. In order to disable the feature, you must set the Group Policy to "Disabled" as well as remove the security functionality from each computer, with a physically present user, in order to clear configuration persisted in UEFI.

The recommended state for this setting is: Enabled with UEFI lock.

**Note:** Virtualization Based Security requires a 64-bit version of Windows with Secure Boot enabled, which in turn requires that Windows was installed with a UEFI BIOS configuration, not a Legacy BIOS configuration. In addition, if running Windows on a virtual machine, the hardware-assisted CPU virtualization feature (Intel VT-x or AMD-V) must be exposed by the host to the guest VM.

More information on system requirements for this feature can be found at [Windows Defender Credential Guard Requirements \(Windows 10\) | Microsoft Docs](#)

**Note #2:** Credential Guard and Device Guard are not currently supported when using Azure IaaS VMs.

#### **Rationale:**

The Enabled with UEFI lock option ensures that Credential Guard cannot be disabled remotely.

## **Impact:**

**Warning:** All drivers on the system must be compatible with this feature or the system may crash. Ensure that this policy setting is only deployed to computers which are known to be compatible.

**Warning #2:** Once this setting is turned on and active, **Credential Guard cannot be disabled solely via GPO** or any other remote method. After removing the setting from GPO, the features must also be manually disabled *locally at the machine* using the steps provided at this link:

[Manage Windows Defender Credential Guard \(Windows 10\) | Microsoft Docs](#)

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeviceGuard:LsaCfgFlags_ProviderSet
```

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\DeviceGuard:LsaCfgFlags
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled with UEFI lock:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/DeviceGuard/LsaCfgFlags
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled.

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

#### **18.8.5.4 (NG) Ensure 'Turn On Virtualization Based Security: Secure Launch Configuration' is set to 'Enabled' (Automated)**

##### **Profile Applicability:**

- Level 1 (L1) + Next Generation Windows Security (NG)
- Level 1 (L1) + BitLocker (BL) + Next Generation Windows Security (NG)
- Level 2 (L2) + Next Generation Windows Security (NG)
- Level 2 (L2) + BitLocker (BL) + Next Generation Windows Security (NG)
- Next Generation Windows Security (NG) - optional add-on for use in the newest hardware and configuration environments

##### **Description:**

Secure Launch protects the Virtualization Based Security environment from exploited vulnerabilities in device firmware.

The recommended state for this setting is: Enabled.

**Note:** Credential Guard and Device Guard are not currently supported when using Azure IaaS VMs.

##### **Rationale:**

Secure Launch changes the way windows boots to use Intel Trusted Execution Technology (TXT) and Runtime BIOS Resilience features to prevent firmware exploits from being able to impact the security of the Windows Virtualization Based Security environment.

##### **Impact:**

**Warning:** All drivers on the system must be compatible with this feature or the system may crash. Ensure that this policy setting is only deployed to computers which are known to be compatible.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeviceGuard:ConfigureSystemGuardLaunch\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\DeviceGuard:ConfigureSystemGuardLaunch

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/DeviceGuard/Configure
          SystemGuardLaunch
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Not Configured. (Administrative users can choose whether to enable or disable Secure Launch.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **18.8.6 Device Health Attestation Service**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `TPM.admx/adml` that is included with the Microsoft Windows 10 Release 1709 Administrative Templates (or newer).

## **18.8.7 Device Installation**

This section contains recommendations related to device installation.

This Group Policy section is provided by the Group Policy template `DeviceInstallation.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.8.7.1 Device Installation Restrictions**

This section contains recommendations related to device installation restrictions.

This Group Policy section is provided by the Group Policy template `DeviceInstallation.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

*18.8.7.1.1 (BL) Ensure 'Prevent installation of devices that match any of these device IDs' is set to 'Enabled' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

#### **Description:**

This policy setting allows you to specify a list of Plug and Play hardware IDs and compatible IDs for devices that Windows is prevented from installing. This policy setting takes precedence over any other policy setting that allows Windows to install a device.

If you enable this policy setting, Windows is prevented from installing a device whose hardware ID or compatible ID appears in the list you create. If you enable this policy setting on a remote desktop server, the policy setting affects redirection of the specified devices from a remote desktop client to the remote desktop server.

If you disable or do not configure this policy setting, devices can be installed and updated as allowed or prevented by other policy settings.

The recommended state for this setting is: `Enabled`.

**Note:** In versions of Windows 10 Release 1803 (and newer), there is a new control named *Enumeration policy for external devices incompatible with Kernel DMA Protection* available that mitigates much of the risk for malicious devices that may perform Direct Memory Access (DMA) attacks. The newer control is also now part of the Windows 10 CIS benchmark, in section 18.8.26. However, if your environment still contains **any** Windows 10 Release 1709 (or older) workstations, then the newer control will not work, so this setting remains important to disable Thunderbolt devices on those systems.

#### **Rationale:**

A BitLocker-protected computer may be vulnerable to Direct Memory Access (DMA) attacks when the computer is turned on or is in the Standby power state - this includes when the workstation is locked.

BitLocker with TPM-only authentication lets a computer enter the power-on state without any pre-boot authentication. Therefore, an attacker may be able to perform DMA attacks.

This issue is documented in Microsoft Knowledge Base article 2516445: [Blocking the SBP-2 driver and Thunderbolt controllers to reduce 1394 DMA and Thunderbolt DMA threats to BitLocker](#).

#### **Impact:**

Devices matching the specified device IDs will be prevented from installation.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeviceInstallation:PreventInstallationOfMatchingDeviceIDs_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="DeviceInstall\_IDS\_Deny\_List" value="1<![{"Name":null,"Data":"PCI\\CC\_0C0A"}]>" /><data id="DeviceInstall\_IDS\_Deny\_Retroactive" value="true" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\DeviceInstallation:PreventInstallationOfMatchingDeviceIDs
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\DeviceInstall\Restrictions:DenyDeviceIDs
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Device Installation/Device Installation Restrictions
Setting Name:	Prevent installation of devices that match any of these device IDs
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Disabled. (Devices can be installed and updated as allowed or prevented by other policy settings.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**18.8.7.1.2 (BL) Ensure 'Prevent installation of devices that match any of these device IDs: Prevent installation of devices that match any of these device IDs' is set to 'PCI\CC\_0C0A' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting allows you to specify a list of Plug and Play hardware IDs and compatible IDs for devices that Windows is prevented from installing. This policy setting takes precedence over any other policy setting that allows Windows to install a device.

If you enable this policy setting, Windows is prevented from installing a device whose hardware ID or compatible ID appears in the list you create. If you enable this policy setting on a remote desktop server, the policy setting affects redirection of the specified devices from a remote desktop client to the remote desktop server.

If you disable or do not configure this policy setting, devices can be installed and updated as allowed or prevented by other policy settings.

The recommended state for this setting is: `PCI\CC_0C0A`

**Note:** This device ID is for Thunderbolt controllers. The USB Type-C (USB-C) port standard that is now common in many computers, especially laptops, utilizes Thunderbolt technology, and therefore may be affected by this restriction. If your organization needs to use USB-C extensively, you may need to decide, internally, to allow yourselves an exception to this recommendation. However, please ensure that all necessary decision-makers have accepted the increased risk of BitLocker encryption key theft (and therefore data theft) via malicious Thunderbolt devices (when left unattended), by doing so.

**Note #2:** In versions of Windows 10 Release 1803 (and newer), there is a new control named *Enumeration policy for external devices incompatible with Kernel DMA Protection* available that mitigates much of the risk for malicious devices that may perform Direct Memory Access (DMA) attacks. The newer control is also now part of the Windows 10 CIS benchmark, in section 18.8.26. However, if your environment still contains **any** Windows 10 Release 1709 (or older) workstations, then the newer control will not work, so this setting remains important to disable Thunderbolt devices on those systems.

**Rationale:**

A BitLocker-protected computer may be vulnerable to Direct Memory Access (DMA) attacks when the computer is turned on or is in the Standby power state - this includes when the workstation is locked.

BitLocker with TPM-only authentication lets a computer enter the power-on state without any pre-boot authentication. Therefore, an attacker may be able to perform DMA attacks.

This issue is documented in Microsoft Knowledge Base article 2516445: [Blocking the SBP-2 driver and Thunderbolt controllers to reduce 1394 DMA and Thunderbolt DMA threats to BitLocker.](#)

**Impact:**

Thunderbolt controllers will be prevented from being installed in Windows.

## Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeviceInstallation:PreventInstallationOfMatchingDeviceIDs_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="DeviceInstall\_IDS\_Deny\_List" value="1<[{"Name":null,"Data":"PCI\\CC\_0C0A"}]>" /><data id="DeviceInstall\_IDS\_Deny\_Retroactive" value="true" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\DeviceInstallation:PreventInstallationOfMatchingDeviceIDs
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to PCI\CC\_0C0A.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\DeviceInstall\Restrictions\DenyDeviceIDs:1
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled with the following IDs [ {"Name":null,"Data":"PCI\\CC\_0C0A"} ]:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Device Installation/Device Installation Restrictions
Setting Name:	Prevent installation of devices that match any of these device IDs
Configuration:	[ {"Name":null,"Data":"PCI\\CC_0C0A"} ]

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

None. (No device ID types are prevented from installation.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**18.8.7.1.3 (BL) Ensure 'Prevent installation of devices that match any of these device IDs: Also apply to matching devices that are already installed.' is set to 'True' (checked) (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting allows you to specify a list of Plug and Play hardware IDs and compatible IDs for devices that Windows is prevented from installing. This policy setting takes precedence over any other policy setting that allows Windows to install a device.

If you enable this policy setting, Windows is prevented from installing a device whose hardware ID or compatible ID appears in the list you create. If you enable this policy setting on a remote desktop server, the policy setting affects redirection of the specified devices from a remote desktop client to the remote desktop server.

If you disable or do not configure this policy setting, devices can be installed and updated as allowed or prevented by other policy settings.

The recommended state for this setting is: **True (checked)**.

**Note:** In versions of Windows 10 Release 1803 (and newer), there is a new control named *Enumeration policy for external devices incompatible with Kernel DMA Protection* available that mitigates much of the risk for malicious devices that may perform Direct Memory Access (DMA) attacks. The newer control is also now part of the Windows 10 CIS benchmark, in section 18.8.26. However, if your environment still contains **any** Windows 10 Release 1709 (or older) workstations, then the newer control will not work, so this setting remains important to disable Thunderbolt devices on those systems.

**Rationale:**

A BitLocker-protected computer may be vulnerable to Direct Memory Access (DMA) attacks when the computer is turned on or is in the Standby power state - this includes when the workstation is locked.

BitLocker with TPM-only authentication lets a computer enter the power-on state without any pre-boot authentication. Therefore, an attacker may be able to perform DMA attacks.

This issue is documented in Microsoft Knowledge Base article 2516445: [Blocking the SBP-2 driver and Thunderbolt controllers to reduce 1394 DMA and Thunderbolt DMA threats to BitLocker.](#)

**Impact:**

Existing devices (that match the device IDs specified) that were previously installed prior to the hardening will be disabled or removed.

## Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeviceInstallation:PreventInstallationOfMatchingDeviceIDs_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="DeviceInstall\_IDS\_Deny\_List" value="1<[{"Name":null,"Data":"PCI\\CC\_0C0A"}]>" /><data id="DeviceInstall\_IDS\_Deny\_Retroactive" value="true" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\DeviceInstallation:PreventInstallationOfMatchingDeviceIDs
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\DeviceInstall\Restrictions:DenyDeviceIDsRetroactive
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled, and check the *Also apply to matching devices that are already installed* checkbox:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path :	Computer Configuration/System/Device Installation/Device Installation Restrictions
Setting Name :	Prevent installation of devices that match any of these device IDs
Configuration :	Also apply to matching devices that are already installed. (checked)

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

False (unchecked). (Pre-existing devices matching the device IDs will not be disabled or removed.)

**CIS Controls:**

Version 7

**5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**18.8.7.1.4 (BL) Ensure 'Prevent installation of devices using drivers that match these device setup classes' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting allows you to specify a list of device setup class globally unique identifiers (GUIDs) for device drivers that Windows is prevented from installing. This policy setting takes precedence over any other policy setting that allows Windows to install a device.

If you enable this policy setting, Windows is prevented from installing or updating device drivers whose device setup class GUIDs appear in the list you create. If you enable this policy setting on a remote desktop server, the policy setting affects redirection of the specified devices from a remote desktop client to the remote desktop server.

If you disable or do not configure this policy setting, Windows can install and update devices as allowed or prevented by other policy settings.

The recommended state for this setting is: Enabled.

**Rationale:**

A BitLocker-protected computer may be vulnerable to Direct Memory Access (DMA) attacks when the computer is turned on or is in the Standby power state - this includes when the workstation is locked.

BitLocker with TPM-only authentication lets a computer enter the power-on state without any pre-boot authentication. Therefore, an attacker may be able to perform DMA attacks.

This issue is documented in Microsoft Knowledge Base article 2516445: [Blocking the SBP-2 driver and Thunderbolt controllers to reduce 1394 DMA and Thunderbolt DMA threats to BitLocker](#).

## **Impact:**

Devices matching the specified device setup classes will be prevented from installation.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeviceInstallation:PreventInstallationOfMatchingDeviceSetupClasses_ProviderSet
```

## **To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="DeviceInstall\_Classes\_Deny\_List" value="1<![{"Name":null,"Data":"{d48179be-ec20-11d1-b6b8-00c04fa372a7}},{ "Name":null,"Data":"{7ebefbc0-3200-11d2-b4c2-00a0C9697d07}},{ "Name":null,"Data":"{c06ff265-ae09-48f0-812c-16753d7cba83}},{ "Name":null,"Data":"{6bdd1fc1-810f-11d0-bec7-08002be2092f}]" /><data id="DeviceInstall\_Classes\_Deny\_Retroactive" value="true" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\DeviceInstallation:PreventInstallationOfMatchingDeviceSetupClasses
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Default Value:**

False (unchecked). (Pre-existing devices matching the device setup classes will not be disabled or removed.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## ***18.8.8 Device Redirection***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `DeviceRedirection.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

## ***18.8.9 Disk NV Cache***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `DiskNVCache.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## ***18.8.10 Disk Quotas***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `DiskQuota.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## ***18.8.11 Display***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Display.admx/adml` that is included with the Microsoft Windows 10 Release 1703 Administrative Templates (or newer).

## ***18.8.12 Distributed COM***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `DCOM.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## ***18.8.13 Driver Installation***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `DeviceInstallation.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.8.14 Early Launch Antimalware**

This section contains recommendations for configuring boot-start driver initialization settings.

This Group Policy section is provided by the Group Policy template `EarlyLaunchAM.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

### ***18.8.14.1 (L1) Ensure 'Boot-Start Driver Initialization Policy' is set to 'Enabled: Good, unknown and bad but critical' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting allows you to specify which boot-start drivers are initialized based on a classification determined by an Early Launch Antimalware boot-start driver. The Early Launch Antimalware boot-start driver can return the following classifications for each boot-start driver:

- **Good:** The driver has been signed and has not been tampered with.
- **Bad:** The driver has been identified as malware. It is recommended that you do not allow known bad drivers to be initialized.
- **Bad, but required for boot:** The driver has been identified as malware, but the computer cannot successfully boot without loading this driver.
- **Unknown:** This driver has not been attested to by your malware detection application and has not been classified by the Early Launch Antimalware boot-start driver.

If you enable this policy setting you will be able to choose which boot-start drivers to initialize the next time the computer is started.

If your malware detection application does not include an Early Launch Antimalware boot-start driver or if your Early Launch Antimalware boot-start driver has been disabled, this setting has no effect and all boot-start drivers are initialized.

The recommended state for this setting is: **Enabled: Good, unknown and bad but critical.**

**Rationale:**

This policy setting helps reduce the impact of malware that has already infected your system.

**Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\System:BootStartDriverInitialization\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="SelectedDriverLoadPolicy" value="3" />.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\System:BootStartDriverInitialization

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 3.

HKEY\_LOCAL\_MACHINE\SYSTEM\CurrentControlSet\Policies\EarlyLaunch:DriverLoadPolicy

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Good, unknown and bad but critical:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Early Launch Antimalware
Setting Name:	Boot-Start Driver Initialization Policy
Configuration:	Enabled: Good, unknown and bad but critical

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Boot-start drivers determined to be Good, Unknown or Bad but Boot Critical are initialized and the initialization of drivers determined to be bad is skipped.)

## **CIS Controls:**

Version 7

### 8.3 Enable Operating System Anti-Exploitation Features/ Deploy Anti-Exploit Technologies

Enable anti-exploitation features such as Data Execution Prevention (DEP) or Address Space Layout Randomization (ASLR) that are available in an operating system or deploy appropriate toolkits that can be configured to apply protection to a broader set of applications and executables.

## ***18.8.15 Enhanced Storage Access***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `EnhancedStorage.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

## ***18.8.16 File Classification Infrastructure***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `srm-fci.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

## ***18.8.17 File Share Shadow Copy Agent***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `FileServerVSSAgent.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

## ***18.8.18 File Share Shadow Copy Provider***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy templates `FileServerVSSProvider.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

## **18.8.19 Filesystem (formerly NTFS Filesystem)**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `FileSys.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

**Note:** This section was initially named *NTFS Filesystem* but was renamed by Microsoft to *Filesystem* starting with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates.

## **18.8.20 Folder Redirection**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `FolderRedirection.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.8.21 Group Policy**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `GroupPolicy.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.8.22 Internet Communication Management**

This section contains recommendations related to Internet Communication Management.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.8.22.1 Internet Communication settings**

This section contains recommendations related to Internet Communication settings.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

#### *18.8.22.1.1 (L1) Ensure 'Turn off downloading of print drivers over HTTP' is set to 'Enabled' (Automated)*

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

This policy setting controls whether the computer can download print driver packages over HTTP. To set up HTTP printing, printer drivers that are not available in the standard operating system installation might need to be downloaded over HTTP.

The recommended state for this setting is: Enabled.

##### **Rationale:**

Users might download drivers that include malicious code.

##### **Impact:**

Print drivers cannot be downloaded over HTTP.

**Note:** This policy setting does not prevent the client computer from printing to printers on the intranet or the Internet over HTTP. It only prohibits downloading drivers that are not already installed locally.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Connectivity:DisableDownloadingOfPrintDriversOverHTTP_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Connectivity:DisableDownloadingOfPrintDriversOverHTTP
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows NT\Printers:DisableWebPnPDownload
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Internet Communication Management/Internet Communication settings
Setting Name:	Turn off downloading of print drivers over HTTP
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users can download print drivers over HTTP.)

## **CIS Controls:**

Version 7

### 2.7 Utilize Application Whitelisting

Utilize application whitelisting technology on all assets to ensure that only authorized software executes and all unauthorized software is blocked from executing on assets.

**18.8.22.1.2 (L1) Ensure 'Turn off Internet download for Web publishing and online ordering wizards' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting controls whether Windows will download a list of providers for the Web publishing and online ordering wizards.

The recommended state for this setting is: Enabled.

**Rationale:**

Although the risk is minimal, enabling this setting will reduce the possibility of a user unknowingly downloading malicious content through this feature.

**Impact:**

Windows is prevented from downloading providers; only the service providers cached in the local registry are displayed.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Connectivity:DisableInternetDownloadForWebPublishingAndOnlineOrderingWizards_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Connectivity:DisableInternetDownloadForWebPublishingAndOnlineOrderingWizards
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\Explorer:NoWebServices
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Internet Communication Management/Internet Communication settings
Setting Name:	Turn off Internet download for Web publishing and online ordering wizards
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (A list of providers is downloaded when the user uses the web publishing or online ordering wizards.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

### **18.8.22.1.3 (L2) Ensure 'Turn off printing over HTTP' is set to 'Enabled' (Automated)**

#### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

#### **Description:**

This policy setting allows you to disable the client computer's ability to print over HTTP, which allows the computer to print to printers on the intranet as well as the Internet.

The recommended state for this setting is: Enabled.

**Note:** This control affects printing over **both** HTTP and HTTPS.

#### **Rationale:**

Information that is transmitted over HTTP through this capability is not protected and can be intercepted by malicious users. For this reason, it is not often used in enterprise managed environments.

#### **Impact:**

The client computer will not be able to print to Internet printers over HTTP or HTTPS.

**Note:** This policy setting affects the client side of Internet printing only. Regardless of how it is configured, a computer could act as an Internet Printing server and make its shared printers available through HTTP.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Connectivity:DisablePrintingOverHTTP_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\Connectivity:DisablePrintingOverHTTP
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows NT\Printers:DisableHTTPPrinting
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Internet Communication Management/Internet Communication settings
Setting Name:	Turn off printing over HTTP
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users can choose to print to Internet printers over HTTP.)

## **CIS Controls:**

Version 7

### **13.3 Monitor and Block Unauthorized Network Traffic**

Deploy an automated tool on network perimeters that monitors for unauthorized transfer of sensitive information and blocks such transfers while alerting information security professionals.

**18.8.22.1.4 (L2) Ensure 'Turn off Windows Error Reporting' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

**Description:**

This policy setting controls whether or not errors are reported to Microsoft.

Error Reporting is used to report information about a system or application that has failed or has stopped responding and is used to improve the quality of the product.

The recommended state for this setting is: Enabled.

**Rationale:**

If a Windows Error occurs in a secure, enterprise managed environment, the error should be reported directly to IT staff for troubleshooting and remediation. There is no benefit to the corporation to report these errors directly to Microsoft, and there is some risk of unknowingly exposing sensitive data as part of the error.

**Impact:**

Users are not given the option to report errors to Microsoft.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\ErrorReporting:DisableWindowsErrorReporting\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\ErrorReporting:DisableWindowsErrorReporting

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\Windows\_ErrorReporting:Disabled

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Windows Error Reporting
Setting Name:	Disable Windows Error Reporting
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Errors may be reported to Microsoft via the Internet or to a corporate file share.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.8.23 iSCSI**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `iSCSI.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.8.24 KDC**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `KDC.admx/adml` that is included with the Microsoft Windows Server 2008 (non-R2) Administrative Templates (or newer).

## **18.8.25 Kerberos**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Kerberos.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.8.26 Kernel DMA Protection**

This section contains recommendations related to Kernel DMA Protection.

This Group Policy section is provided by the Group Policy template `DmaGuard.admx/adml` that is included with the Microsoft Windows 10 Release 1809 and Server 2019 Administrative Templates (or newer).

### *18.8.26.1 (BL) Ensure 'Enumeration policy for external devices incompatible with Kernel DMA Protection' is set to 'Enabled: Block All' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 1 (L1) + BitLocker (BL) + Next Generation Windows Security (NG)
- Level 2 (L2) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL) + Next Generation Windows Security (NG)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

#### **Description:**

This policy is intended to provide additional security against external DMA-capable devices. It allows for more control over the enumeration of external DMA-capable devices that are not compatible with DMA Remapping/device memory isolation and sandboxing.

The recommended state for this setting is: Enabled: Block All.

**Note:** This policy does not apply to 1394, PCMCIA or ExpressCard devices. The protection also only applies to Windows 10 R1803 or higher, and also requires a UEFI BIOS to function.

**Note #2:** More information on this feature is available at this link: [Kernel DMA Protection for Thunderbolt™ 3 \(Windows 10\) | Microsoft Docs](#).

### **Rationale:**

Device memory sandboxing allows the OS to leverage the I/O Memory Management Unit (IOMMU) of a device to block unpermitted I/O, or memory access, by the peripheral.

### **Impact:**

External devices that are not compatible with DMA-remapping will not be enumerated and will not function unless/until the user has logged in successfully *and* has an unlocked user session. Once enumerated, these devices will continue to function, regardless of the state of the session. Devices that **are** compatible with DMA-remapping will be enumerated immediately, with their device memory isolated.

### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeviceEnumerationPolicy_ProviderSet
```

### **To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\DeviceEnumerationPolicy
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Block All:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name>
Description:	<Enter Description>
OMA-URL:	./Device/Vendor/MSFT/Policy/Config/DmaGuard/Device EnumerationPolicy
Data Type:	Integer
Value:	0

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Windows 10 R1803 and newer: Enabled if UEFI BIOS is present. Disabled if using legacy BIOS.

Older OSes: Not supported (i.e. Disabled).

## **CIS Controls:**

Version 7

### **1.4 Maintain Detailed Asset Inventory**

Maintain an accurate and up-to-date inventory of all technology assets with the potential to store or process information. This inventory shall include all hardware assets, whether connected to the organization's network or not.

### ***18.8.27 Locale Services***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template Globalization.admx/adml that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.8.28 Logon**

This section contains recommendations related to the logon process and lock screen.

This Group Policy section is provided by the Group Policy template `Logon.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### *18.8.28.1 (L1) Ensure 'Do not display network selection UI' is set to 'Enabled' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting allows you to control whether anyone can interact with available networks UI on the logon screen.

The recommended state for this setting is: `Enabled`.

#### **Rationale:**

An unauthorized user could disconnect the PC from the network or can connect the PC to other available networks without signing into Windows.

#### **Impact:**

The PC's network connectivity state cannot be changed without signing into Windows.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\WindowsLogon:DontDisplayNetworkSelectionUI\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\WindowsLogon:DontDisplayNetworkSelectionUI

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\System:DontDisplayNetworkSelectionUI

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Logon
Setting Name:	Do not display network selection UI
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Any user can disconnect the PC from the network or can connect the PC to other available networks without signing into Windows.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**18.8.28.2 (L1) Ensure 'Enumerate local users on domain-joined computers' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting allows local users to be enumerated on domain-joined computers.

The recommended state for this setting is: Disabled.

**Rationale:**

A malicious user could use this feature to gather account names of other users, that information could then be used in conjunction with other types of attacks such as guessing passwords or social engineering. The value of this countermeasure is small because a user with domain credentials could gather the same account information using other methods.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\WindowsLogon:EnumerateLocalUsersOnDomainJoinedComputers\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\WindowsLogon:EnumerateLocalUsersOnDomainJoinedComputers

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\System:EnumerateLocalUsers

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Logon
Setting Name:	Enumerate local users on domain-joined computers
Configuration:	Disabled

- Select *OK* or *Save*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (The Logon UI will not enumerate local users on domain-joined computers.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**18.8.28.3 (L1) Ensure 'Turn off app notifications on the lock screen' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting allows you to prevent app notifications from appearing on the lock screen.

The recommended state for this setting is: Enabled.

**Rationale:**

App notifications might display sensitive business or personal data.

**Impact:**

No app notifications are displayed on the lock screen.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\WindowsLog  
on:DisableLockScreenAppNotifications_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
WindowsLogon:DisableLockScreenAppNotifications
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\System:DisableLockSc  
reenAppNotifications
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Logon
Setting Name:	Turn off app notifications on the lock screen
Configured:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users can choose which apps display notifications on the lock screen.)

## **CIS Controls:**

Version 7

### **16.11 Lock Workstation Sessions After Inactivity**

Automatically lock workstation sessions after a standard period of inactivity.

**18.8.28.4 (L1) Ensure 'Turn off picture password sign-in' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting allows you to control whether a domain user can sign in using a picture password.

The recommended state for this setting is: Enabled.

**Note:** If the picture password feature is permitted, the user's domain password is cached in the system vault when using it.

**Rationale:**

Picture passwords bypass the requirement for a typed complex password. In a shared work environment, a simple shoulder surf where someone observed the on-screen gestures would allow that person to gain access to the system without the need to know the complex password. Vertical monitor screens with an image are much more visible at a distance than horizontal key strokes, increasing the likelihood of a successful observation of the mouse gestures.

**Impact:**

Users will not be able to set up or sign in with a picture password.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Credential  
Providers:BlockPicturePassword_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
CredentialProviders:BlockPicturePassword
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\System:BlockDomainPict  
urePassword
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Logon
Setting Name:	Turn off picture password sign-in
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users can set up and use a picture password.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**18.8.28.5 (L1) Ensure 'Turn on convenience PIN sign-in' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting allows you to control whether a domain user can sign in using a convenience PIN. In Windows 10, convenience PIN was replaced with Passport, which has stronger security properties. To configure Passport for domain users, use the policies under Computer Configuration\Administrative Templates\Windows Components\Microsoft Passport for Work.

**Note:** The user's domain password will be cached in the system vault when using this feature.

The recommended state for this setting is: Disabled.

**Rationale:**

A PIN is created from a much smaller selection of characters than a password, so in most cases a PIN will be much less robust than a password.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Credential Providers:AllowPINLogon\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\CredentialProviders:AllowPINLogon

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\System:AllowDomainPINLogon

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Logon
Setting Name:	Turn on convenience PIN sign-in
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (A domain user can't set up and use a convenience PIN.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## ***18.8.29 Mitigation Options***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `GroupPolicy.admx/adml` that is included with the Microsoft Windows 10 RTM (Release 1507) Administrative Templates (or newer).

## ***18.8.30 Net Logon***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Netlogon.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.8.31 OS Policies**

This section contains recommendations related to OS Policies.

This Group Policy section is provided by the Group Policy template `OSPolicy.admx/adml` that is included with the Microsoft Windows 10 Release 1709 Administrative Templates (or newer).

### ***18.8.31.1 (L2) Ensure 'Allow Clipboard synchronization across devices' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

#### **Description:**

This setting determines whether Clipboard contents can be synchronized across devices.

The recommended state for this setting is: `Disabled`.

#### **Rationale:**

In high security environments, clipboard data should stay local to the system and not synced across devices, as it may contain very sensitive information that must be contained locally.

#### **Impact:**

Clipboard contents will not be shareable to other devices.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Privacy:DisableAdvertisingId\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\Privacy:DisableAdvertisingId

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Privacy/AllowCrossDeviceClipboard
Data type:	Integer
Value:	0

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (Clipboard contents are allowed to be synchronized across devices logged in under the same Microsoft account or Azure AD account.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**18.8.31.2 (L2) Ensure 'Allow upload of User Activities' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

**Description:**

This policy setting determines whether published User Activities can be uploaded to the cloud.

The recommended state for this setting is: Disabled.

**Rationale:**

Due to privacy concerns, data should never be sent to any 3rd party since this data could contain sensitive information.

**Impact:**

Activities of type User Activity are not allowed to be uploaded to the cloud. The Timeline feature will not function across devices.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Privacy:UploadUserActivities\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\Privacy:UploadUserActivities

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Privacy/Upload UserActivities
Data type:	Integer
Value:	0

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (Activities of type User Activity are allowed to be uploaded to the cloud.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.8.32 Performance Control Panel**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `PerfCenterCPL.admx/adml` that is only included with the Microsoft Windows Vista through the Windows 8.0 & Server 2012 (non-R2) Administrative Templates.

## **18.8.33 PIN Complexity**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Passport.admx/adml` that is included with the Microsoft Windows 10 Release 1703 Administrative Templates (or newer).

## **18.8.34 Power Management**

This section contains recommendations for Power Management settings.

This Group Policy section is provided by the Group Policy template `Power.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.8.34.1 Button Settings**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Power.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.8.34.2 Energy Saver Settings**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Power.admx/adml` that is included with the Microsoft Windows 10 Release 1607 & Server 2016 Administrative Templates (or newer).

### ***18.8.34.3 Hard Disk Settings***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Power.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.8.34.4 Notification Settings***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Power.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.8.34.5 Power Throttling Settings***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Power.admx/adml` that is included with the Microsoft Windows 10 Release 1709 Administrative Templates (or newer).

## **18.8.34.6 Sleep Settings**

This section contains recommendations related to Power Management Sleep mode.

This Group Policy section is provided by the Group Policy template `Power.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

*18.8.34.6.1 (BL) Ensure 'Allow standby states (S1-S3) when sleeping (on battery)' is set to 'Disabled' (Automated)*

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

Dictates whether or not Windows is allowed to use standby states when sleeping the computer.

The recommended state for this setting is: `Disabled`.

**Rationale:**

System sleep states (S1-S3) keep power to the RAM which may contain secrets, such as the BitLocker volume encryption key. An attacker finding a computer in sleep states (S1-S3) could directly attack the memory of the computer and gain access to the secrets through techniques such as RAM reminisce and direct memory access (DMA).

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 2. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Power:AllowStandbyStatesWhenSleepingOnBattery\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Power:AllowStandbyStatesWhenSleepingOnBattery\_ProviderSet

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Power\PowerSettings\abfc2519-3608-4c2a-94ea-171b0ed546ab:DCSettingIndex

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Power Management/Sleep Settings
Setting Name:	Allow standby states (S1-S3) when sleeping (on battery)
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users will not be able to use Sleep (S3) while on battery, which resumes faster than Hibernation (S4).)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**18.8.34.6.2 (BL) Ensure 'Allow standby states (S1-S3) when sleeping (plugged in)' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

Dictates whether or not Windows is allowed to use standby states when sleeping the computer.

The recommended state for this setting is: Disabled.

**Rationale:**

System sleep states (S1-S3) keep power to the RAM which may contain secrets, such as the BitLocker volume encryption key. An attacker finding a computer in sleep states (S1-S3) could directly attack the memory of the computer and gain access to the secrets through techniques such as RAM reminisce and direct memory access (DMA).

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 2. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Power:AllowStandbyWhenSleepingPluggedIn_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Power:AllowStandbyWhenSleepingPluggedIn_ProviderSet
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Power\PowerSettings\abfc2519-3608-4c2a-94ea-171b0ed546ab:ACSettingIndex
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Power Management/Sleep Settings
Setting Name:	Allow standby states (S1-S3) when sleeping (plugged in)
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Disabled. (Users will not be able to use Sleep (S3) while plugged in, which resumes faster than Hibernation (S4).)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**18.8.34.6.3 (L1) Ensure 'Require a password when a computer wakes (on battery)' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

Specifies whether or not the user is prompted for a password when the system resumes from sleep.

The recommended state for this setting is: Enabled.

**Rationale:**

Enabling this setting ensures that anyone who wakes an unattended computer from sleep state will have to provide logon credentials before they can access the system.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Power:RequirePasswordWhenComputerWakesOnBattery_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Power:RequirePasswordWhenComputerWakesOnBattery
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Power\PowerSettings\0e796bdb-100d-47d6-a2d5-f7d2daa51f51:DCSettingIndex
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Power Management/Sleep Settings
Setting Name:	Require a password when a computer wakes (on battery)
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Enabled. (The user is prompted for a password when the system resumes from sleep while on battery.)

## **CIS Controls:**

Version 7

### **16.11 Lock Workstation Sessions After Inactivity**

Automatically lock workstation sessions after a standard period of inactivity.

**18.8.34.6.4 (L1) Ensure 'Require a password when a computer wakes (plugged in)' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

Specifies whether or not the user is prompted for a password when the system resumes from sleep.

The recommended state for this setting is: Enabled.

**Rationale:**

Enabling this setting ensures that anyone who wakes an unattended computer from sleep state will have to provide logon credentials before they can access the system.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Power:RequirePasswordWhenComputerWakesPluggedIn_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Power:RequirePasswordWhenComputerWakesPluggedIn
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Power\PowerSettings\0e796bdb-100d-47d6-a2d5-f7d2daa51f51:ACSettingIndex
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Power Management/Sleep Settings
Setting Name:	Require a password when a computer wakes (plugged in)
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Enabled. (The user is prompted for a password when the system resumes from sleep while plugged in.)

## **CIS Controls:**

Version 7

### **16.11 Lock Workstation Sessions After Inactivity**

Automatically lock workstation sessions after a standard period of inactivity.

## **18.8.35 Recovery**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `ReAgent.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

## **18.8.36 Remote Assistance**

This section contains recommendations related to Remote Assistance.

This Group Policy section is provided by the Group Policy template `RemoteAssistance.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.8.36.1 (L1) Ensure 'Configure Offer Remote Assistance' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting allows you to turn on or turn off Offer (Unsolicited) Remote Assistance on this computer.

Help desk and support personnel will not be able to proactively offer assistance, although they can still respond to user assistance requests.

The recommended state for this setting is: Disabled.

#### **Rationale:**

A user might be tricked and accept an unsolicited Remote Assistance offer from a malicious user.

#### **Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteAssistance:UnsolicitedRemoteAssistance\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\RemoteAssistance:UnsolicitedRemoteAssistance

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows NT\Terminal Services:fAllowUnsolicited

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Remote Assistance
Setting Name:	Configure Offer Remote Assistance
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users on this computer cannot get help from their corporate technical support staff using Offer (Unsolicited) Remote Assistance.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

**18.8.36.2 (L1) Ensure 'Configure Solicited Remote Assistance' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting allows you to turn on or turn off Solicited (Ask for) Remote Assistance on this computer.

The recommended state for this setting is: Disabled.

**Rationale:**

There is slight risk that a rogue administrator will gain access to another user's desktop session, however, they cannot connect to a user's computer unannounced or control it without permission from the user. When an expert tries to connect, the user can still choose to deny the connection or give the expert view-only privileges. The user must explicitly click the Yes button to allow the expert to remotely control the workstation.

**Impact:**

Users on this computer cannot use e-mail or file transfer to ask someone for help. Also, users cannot use instant messaging programs to allow connections to this computer.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteAssistance:SolicitedRemoteAssistance\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\RemoteAssistance:SolicitedRemoteAssistance

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows NT\Terminal Services:fAllowToGetHelp

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Remote Assistance
Setting Name:	Configure Solicited Remote Assistance
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Users can turn on or turn off Solicited (Ask for) Remote Assistance themselves in System Properties in Control Panel. Users can also configure Remote Assistance settings.

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.8.37 Remote Procedure Call**

This section contains recommendations related to Remote Procedure Call.

This Group Policy section is provided by the Group Policy template `RPC.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.8.37.1 (L1) Ensure 'Enable RPC Endpoint Mapper Client Authentication' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting controls whether RPC clients authenticate with the Endpoint Mapper Service when the call they are making contains authentication information. The Endpoint Mapper Service on computers running Windows NT4 (all service packs) cannot process authentication information supplied in this manner. This policy setting can cause a specific issue with 1-way forest trusts if it is applied to the *trusting* domain DCs (see Microsoft [KB3073942](#)), so we do not recommend applying it to Domain Controllers.

**Note:** This policy will not be effective until the system is rebooted.

The recommended state for this setting is: Enabled.

#### **Rationale:**

Anonymous access to RPC services could result in accidental disclosure of information to unauthenticated users.

#### **Impact:**

RPC clients will authenticate to the Endpoint Mapper Service for calls that contain authentication information. Clients making such calls will not be able to communicate with the Windows NT4 Server Endpoint Mapper Service.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteProcedureCall:RPCEndpointMapperClientAuthentication_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\RemoteProcedureCall:RPCEndpointMapperClientAuthentication
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows NT\Rpc:EnableAuthEpResolution
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Remote Procedure Call
Setting Name:	Enable RPC Endpoint Mapper Client Authentication
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (RPC clients will not authenticate to the Endpoint Mapper Service, but they will be able to communicate with the Windows NT4 Server Endpoint Mapper Service.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.8.37.2 (L1) Ensure 'Restrict Unauthenticated RPC clients' is set to 'Enabled: Authenticated' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting controls how the RPC server runtime handles unauthenticated RPC clients connecting to RPC servers.

This policy setting impacts all RPC applications. In a domain environment this policy setting should be used with caution as it can impact a wide range of functionality including group policy processing itself. Reverting a change to this policy setting can require manual intervention on each affected machine. **This policy setting should never be applied to a Domain Controller.**

A client will be considered an authenticated client if it uses a named pipe to communicate with the server or if it uses RPC Security. RPC Interfaces that have specifically requested to be accessible by unauthenticated clients may be exempt from this restriction, depending on the selected value for this policy setting.

-- "**None**" allows all RPC clients to connect to RPC Servers running on the machine on which the policy setting is applied.

-- "**Authenticated**" allows only authenticated RPC Clients (per the definition above) to connect to RPC Servers running on the machine on which the policy setting is applied. Exemptions are granted to interfaces that have requested them.

-- "**Authenticated without exceptions**" allows only authenticated RPC Clients (per the definition above) to connect to RPC Servers running on the machine on which the policy setting is applied. No exceptions are allowed. **This value has the potential to cause serious problems and is not recommended.**

**Note:** This policy setting will not be applied until the system is rebooted.

The recommended state for this setting is: **Enabled: Authenticated**.

### **Rationale:**

Unauthenticated RPC communication can create a security vulnerability.

**Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteProcedureCall:RestrictUnauthenticatedRPCClients_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="RpcRestrictRemoteClientList" value="1" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\RemoteProcedureCall:RestrictUnauthenticatedRPCClients
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows NT\Rpc:RestrictRemoteClients
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Authenticated:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/System/Remote Procedure Call
Setting Name:	Restrict Unauthenticated RPC clients
Configuration:	Enabled: Authenticated

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled: Authenticated. (Only authenticated RPC clients are allowed to connect to RPC servers running on the machine. Exemptions are granted to interfaces that have requested them.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

### ***18.8.40 Server Manager***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `ServerManager.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.8.41 Service Control Manager Settings***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `ServiceControlManager.admx/adml` that is included with the Microsoft Windows 10 Release 1903 Administrative Templates (or newer).

## **18.8.42 Shutdown**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WinInit.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

## **18.8.43 Shutdown Options**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Winsrv.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.8.44 Storage Health**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `StorageHealth.admx/adml` that is included with the Microsoft Windows 10 Release 1709 Administrative Templates (or newer).

## **18.8.45 Storage Sense**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `StorageSense.admx/adml` that is included with the Microsoft Windows 10 Release 1903 Administrative Templates (or newer).

## **18.8.46 System Restore**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `SystemRestore.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.8.47 Troubleshooting and Diagnostics**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.8.48 Trusted Platform Module Services**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `TPM.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.8.49 User Profiles**

This section contains recommendations related to User Profiles.

This Group Policy section is provided by the Group Policy template `UserProfiles.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.8.49.1 (L2) Ensure 'Turn off the advertising ID' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

#### **Description:**

This policy setting turns off the advertising ID, preventing apps from using the ID for experiences across apps.

The recommended state for this setting is: Enabled.

#### **Rationale:**

Tracking user activity for advertising purposes, even anonymously, may be a privacy concern. In an enterprise managed environment, applications should not need or require tracking for targeted advertising.

#### **Impact:**

The advertising ID is turned off. Apps can't use the ID for experiences across apps.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Privacy:DisableAdvertisingId\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\Privacy:DisableAdvertisingID

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\AdvertisingInfo:DisabledByGroupPolicy

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Privacy/DisableAdvertisingID
Data type:	Integer
Value:	1

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users can control whether apps can use the advertising ID for experiences across apps.)

## ***18.8.50 Windows File Protection***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsFileProtection.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## ***18.8.51 Windows HotStart***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `HotStart.admx/adml` that is only included with the Microsoft Windows Vista through the Windows 8.0 & Server 2012 (non-R2) Administrative Templates.

## ***18.8.52 Windows Time Service***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `W32Time.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9 Windows Components**

This section contains recommendations for Windows Component settings.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.9.1 Active Directory Federation Services**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `adfs.admx/adml` that is only included with the Microsoft Windows Vista through the Windows 8.0 & Server 2012 (non-R2) Administrative Templates.

### **18.9.2 ActiveX Installer Service**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `ActiveXInstallService.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.9.3 Add features to Windows 8 / 8.1 / 10 (formerly Windows Anytime Upgrade)**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsAnytimeUpgrade.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

**Note:** This section was initially named *Windows Anytime Upgrade* but was renamed by Microsoft to *Add features to Windows x* starting with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates.

## **18.9.4 App Package Deployment**

This section contains recommendations for App Package Deployment settings.

This Group Policy section is provided by the Group Policy template `AppxPackageManager.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

### ***18.9.4.1 (L2) Ensure 'Allow a Windows app to share application data between users' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

#### **Description:**

Manages a Windows app's ability to share data between users who have installed the app. Data is shared through the `SharedLocal` folder. This folder is available through the `Windows.Storage` API.

The recommended state for this setting is: `Disabled`.

#### **Rationale:**

Users of a system could accidentally share sensitive data with other users on the same system.

#### **Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\ApplicationManagement:AllowSharedUserAppData\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\ApplicationManagement:AllowSharedUserAppData

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/ApplicationManagement/AllowSharedUserAppData
Data type:	Integer
Value:	0

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Windows apps won't be able to share app data with other instances of that app.)

## **CIS Controls:**

Version 7

### 14.6 Protect Information through Access Control Lists

Protect all information stored on systems with file system, network share, claims, application, or database specific access control lists. These controls will enforce the principle that only authorized individuals should have access to the information based on their need to access the information as a part of their responsibilities.

## **18.9.5 App Privacy**

This section contains recommendations for App Privacy settings.

This Group Policy section is provided by the Group Policy template `AppPrivacy.admx/adml` that is included with the Microsoft Windows 10 Release 1511 Administrative Templates (or newer).

### *18.9.5.1 (L1) Ensure 'Let Windows apps activate with voice while the system is locked' is set to 'Disabled' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting specifies whether Windows apps can be activated by voice (apps and Cortana) while the system is locked.

The recommended state for this setting is: Disabled.

#### **Rationale:**

Access to any computer resource should not be allowed when the device is locked.

#### **Impact:**

Users will not be able to activate apps while the computer is locked.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Privacy:LetAppsActivateWithVoiceAboveLock\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 2.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Privacy:LetAppsActivateWithVoiceAboveLock

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Device restrictions)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Device Restrictions/Locked Screen Experience
Setting Name:	Voice activate apps from locked screen
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Not configured (The user can decide whether Windows apps can interact with applications using speech while the system is locked by using Settings > Privacy on the device.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.9.6 App runtime**

This section contains recommendations for App runtime settings.

This Group Policy section is provided by the Group Policy template `AppXRuntime.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

### ***18.9.6.1 (L1) Ensure 'Allow Microsoft accounts to be optional' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting lets you control whether Microsoft accounts are optional for Windows Store apps that require an account to sign in. This policy only affects Windows Store apps that support it.

The recommended state for this setting is: `Enabled`.

#### **Rationale:**

Enabling this setting allows an organization to use their enterprise user accounts instead of using their Microsoft accounts when accessing Windows store apps. This provides the organization with greater control over relevant credentials. Microsoft accounts cannot be centrally managed and as such enterprise credential security policies cannot be applied to them, which could put any information accessed by using Microsoft accounts at risk.

#### **Impact:**

Windows Store apps that typically require a Microsoft account to sign in will allow users to sign in with an enterprise account instead.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\AppRuntime  
:AllowMicrosoftAccountsToBeOptional_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\A  
ppRuntime:AllowMicrosoftAccountsToBeOptional
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:  
MSAOptional
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/App runtime
Setting Name:	Allow Microsoft accounts to be optional
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users will need to sign in with a Microsoft account.)

## **CIS Controls:**

Version 7

### **16.2 Configure Centralized Point of Authentication**

Configure access for all accounts through as few centralized points of authentication as possible, including network, security, and cloud systems.

## ***18.9.7 Application Compatibility***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `AppCompat.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.8 AutoPlay Policies**

This section contains recommendations for AutoPlay policies.

This Group Policy section is provided by the Group Policy template `AutoPlay.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.9.8.1 (L1) Ensure 'Disallow Autoplay for non-volume devices' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting disallows AutoPlay for MTP devices like cameras or phones.

The recommended state for this setting is: Enabled.

#### **Rationale:**

An attacker could use this feature to launch a program to damage a client computer or data on the computer.

#### **Impact:**

AutoPlay will not be allowed for MTP devices like cameras or phones.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Autoplay:D  
isallowAutoplayForNonVolumeDevices_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
Autoplay:DisallowAutoplayForNonVolumeDevices
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\Explorer:NoAutoplayfor  
nonVolume
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/AutoPlay Policies
Setting Name:	Disallow Autoplay for non-volume devices
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (AutoPlay is enabled for non-volume devices.)

## **CIS Controls:**

Version 7

### 8.5 Configure Devices Not To Auto-run Content

Configure devices to not auto-run content from removable media.

**18.9.8.2 (L1) Ensure 'Set the default behavior for AutoRun' is set to 'Enabled: Do not execute any autorun commands' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting sets the default behavior for Autorun commands. Autorun commands are generally stored in `autorun.inf` files. They often launch the installation program or other routines.

The recommended state for this setting is: Enabled: Do not execute any autorun commands.

**Rationale:**

Prior to Windows Vista, when media containing an autorun command is inserted, the system will automatically execute the program without user intervention. This creates a major security concern as code may be executed without user's knowledge. The default behavior starting with Windows Vista is to prompt the user whether autorun command is to be run. The autorun command is represented as a handler in the Autoplay dialog.

**Impact:**

AutoRun commands will be completely disabled.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Autoplay:SetDefaultAutoRunBehavior_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="NoAutorun\_Dropdown" value="1" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Autoplay:SetDefaultAutoRunBehavior
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\Explorer:NoAutorun
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Do not execute any autorun commands:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/AutoPlay Policies
Setting Name:	Set the default behavior for AutoRun
Configuration:	Enabled: Do not execute any autorun commands

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Windows will prompt the user whether autorun command is to be run.)

## **CIS Controls:**

Version 7

### **8.5 Configure Devices Not To Auto-run Content**

Configure devices to not auto-run content from removable media.

### **18.9.8.3 (L1) Ensure 'Turn off Autoplay' is set to 'Enabled: All drives' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

Autoplay starts to read from a drive as soon as you insert media in the drive, which causes the setup file for programs or audio media to start immediately. An attacker could use this feature to launch a program to damage the computer or data on the computer. Autoplay is disabled by default on some removable drive types, such as floppy disk and network drives, but not on CD-ROM drives.

**Note:** You cannot use this policy setting to enable Autoplay on computer drives in which it is disabled by default, such as floppy disk and network drives.

The recommended state for this setting is: Enabled: All drives.

#### **Rationale:**

An attacker could use this feature to launch a program to damage a client computer or data on the computer.

#### **Impact:**

Autoplay will be disabled - users will have to manually launch setup or installation programs that are provided on removable media.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Autoplay:TurnOffAutoPlay_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="Autorun\_Box" value="255" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Autoplay:TurnOffAutoPlay
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 255.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\Explorerr:NoDriveTypeAutoRun
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: All drives:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/AutoPlay Policies
Setting Name:	Turn off Autoplay
Configuration:	Enabled: All drives

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Autoplay is enabled.)

## **CIS Controls:**

Version 7

### 8.5 Configure Devices Not To Auto-run Content

Configure devices to not auto-run content from removable media.

## **18.9.9 Backup**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `UserDataBackup.admx/adml` that is only included with the Microsoft Windows Vista through the Windows 10 Release 1511 Administrative Templates (except for the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates).

## **18.9.10 Biometrics**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Biometrics.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

## **18.9.11 BitLocker Drive Encryption**

This section contains recommendations for configuring BitLocker.

This Group Policy section is provided by the Group Policy template `VolumeEncryption.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.9.11.1 Fixed Data Drives**

This section contains recommendations for configuring Fixed Data Drives in BitLocker.

This Group Policy section is provided by the Group Policy template `VolumeEncryption.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

*18.9.11.1.1 (BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered' is set to 'Enabled' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

#### **Description:**

This policy setting allows you to control how BitLocker-protected fixed data drives are recovered in the absence of the required credentials. This policy setting is applied when you turn on BitLocker.

The "Allow data recovery agent" check box is used to specify whether a Data Recovery Agent can be used with BitLocker-protected fixed data drives. Before a Data Recovery Agent can be used it must be added from the Public Key Policies item in either the Group Policy Management Console or the Local Group Policy Editor. Consult the BitLocker Drive Encryption Deployment Guide on Microsoft TechNet for more information about adding Data Recovery Agents.

In "Configure user storage of BitLocker recovery information" select whether users are allowed, required, or not allowed to generate a 48-digit recovery password or a 256-bit recovery key.

Select "Omit recovery options from the BitLocker setup wizard" to prevent users from specifying recovery options when they enable BitLocker on a drive. This means that you will not be able to specify which recovery option to use when you enable BitLocker, instead BitLocker recovery options for the drive are determined by the policy setting.

In "Save BitLocker recovery information to Active Directory Domain Services" choose which BitLocker recovery information to store in AD DS for fixed data drives. If you select "Backup recovery password and key package", both the BitLocker recovery password and key package are stored in AD DS. Storing the key package supports recovering data from a drive that has been physically corrupted. If you select "Backup recovery password only", only the recovery password is stored in AD DS.

Select the "Do not enable BitLocker until recovery information is stored in AD DS for fixed data drives" check box if you want to prevent users from enabling BitLocker unless the computer is connected to the domain and the backup of BitLocker recovery information to AD DS succeeds.

**Note:** If the "Do not enable BitLocker until recovery information is stored in AD DS for fixed data drives" check box is selected, a recovery password is automatically generated.

The recommended state for this setting is: Enabled.

#### **Rationale:**

Administrators should always have a safe, secure way to access encrypted data in the event users cannot access their data.

Additionally, as with any authentication method, a drive can be compromised by guessing or finding the authentication information used to access the drive.

#### **Impact:**

To use BitLocker, a Data Recovery Agent will need to be configured for fixed drives. To recover a drive will require highly-controlled access to the Data Recovery Agent private key.

## Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker:FixedDrivesRecoveryOptions\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="FDVAllowDRA\_Name" value="true" /><data id="FDVRecoveryPasswordUsageDropDown\_Name" value="2" /><data id="FDVRecoveryKeyUsageDropDown\_Name" value="2" /><data id="FDVHideRecoveryPage\_Name" value="true" /><data id="FDVActiveDirectoryBackup\_Name" value="false" /><data id="FDVActiveDirectoryBackupDropDown\_Name" value="1" /><data id="FDVRequireActiveDirectoryBackup\_Name" value="false" />.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\BitLocker:FixedDrivesRecoveryOptions

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\FVE:FDVRecovery

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/BitLocker Drive Encryption/Fixed Data Drives
Setting Name:	Choose how BitLocker-protected fixed drives can be recovered
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Disabled. (The default recovery options are supported for BitLocker recovery - a DRA is allowed, and the recovery options can be specified by the user including the recovery password and recovery key, and recovery information is not backed up to AD DS.)

## **CIS Controls:**

Version 7

### **13.6 Encrypt the Hard Drive of All Mobile Devices.**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

**18.9.11.1.2 (BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Allow data recovery agent' is set to 'Enabled: True' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting allows you to control how BitLocker-protected fixed data drives are recovered in the absence of the required credentials. This policy setting is applied when you turn on BitLocker.

The "Allow data recovery agent" check box is used to specify whether a Data Recovery Agent can be used with BitLocker-protected fixed data drives. Before a Data Recovery Agent can be used it must be added from the Public Key Policies item in either the Group Policy Management Console or the Local Group Policy Editor. Consult the BitLocker Drive Encryption Deployment Guide on Microsoft TechNet for more information about adding Data Recovery Agents.

The recommended state for this setting is: Enabled: True (checked).

**Rationale:**

Administrators should always have a safe, secure way to access encrypted data in the event users cannot access their data.

Additionally, as with any authentication method, a drive can be compromised by guessing or finding the authentication information used to access the drive.

To use BitLocker, a Data Recovery Agent will need to be configured for fixed drives. To recover a drive will require highly-controlled access to the Data Recovery Agent private key.

**Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker:  
FixedDrivesRecoveryOptions\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="FDVAllowDRA\_Name" value="true" /><data id="FDVRecoveryPasswordUsageDropDown\_Name" value="2" /><data id="FDVRecoveryKeyUsageDropDown\_Name" value="2" /><data id="FDVHideRecoveryPage\_Name" value="true" /><data id="FDVActiveDirectoryBackup\_Name" value="false" /><data id="FDVActiveDirectoryBackupDropDown\_Name" value="1" /><data id="FDVRequireActiveDirectoryBackup\_Name" value="false" />.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\BitLocker:FixedDrivesRecoveryOptions

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\FVE:FDVManageDRA

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Allow data recovery agent:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/BitLocker Drive Encryption/Fixed Data Drives
Setting Name:	Choose how BitLocker-protected fixed drives can be recovered
Configuration:	Check Allow data recovery agent

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Enabled: True. (A DRA is allowed.)

## **CIS Controls:**

Version 7

### **13.6 Encrypt the Hard Drive of All Mobile Devices.**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

**18.9.11.1.3 (BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Recovery Password' is set to 'Enabled: Allow 48-digit recovery password' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting allows you to control how BitLocker-protected fixed data drives are recovered in the absence of the required credentials. This policy setting is applied when you turn on BitLocker.

In "Configure user storage of BitLocker recovery information" select whether users are allowed, required, or not allowed to generate a 48-digit recovery password or a 256-bit recovery key.

The recommended state for this setting is: Enabled: Allow 48-digit recovery password.

**Rationale:**

Administrators should always have a safe, secure way to access encrypted data in the event users cannot access their data.

Additionally, as with any authentication method, a drive can be compromised by guessing or finding the authentication information used to access the drive.

To use BitLocker, a Data Recovery Agent will need to be configured for fixed drives. To recover a drive will require highly-controlled access to the Data Recovery Agent private key.

**Impact:**

A 48-digit recovery password will be permitted for fixed drives.

## Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker:FixedDrivesRecoveryOptions\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="FDVAllowDRA\_Name" value="true" /><data id="FDVRecoveryPasswordUsageDropDown\_Name" value="2" /><data id="FDVRecoveryKeyUsageDropDown\_Name" value="2" /><data id="FDVHideRecoveryPage\_Name" value="true" /><data id="FDVActiveDirectoryBackup\_Name" value="false" /><data id="FDVActiveDirectoryBackupDropDown\_Name" value="1" /><data id="FDVRequireActiveDirectoryBackup\_Name" value="false" />.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\BitLocker:FixedDrivesRecoveryOptions

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 2.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\FVE:FDVRecoveryPassword

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Allow 48-digit recovery password:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/BitLocker Drive Encryption/Fixed Data Drives
Setting Name:	Choose how BitLocker-protected fixed drives can be recovered
Configuration:	Allow 48-digit recovery key

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Recovery options are specified by the user.

## **CIS Controls:**

Version 7

### **13.6 Encrypt the Hard Drive of All Mobile Devices.**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

**18.9.11.1.4 (BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Omit recovery options from the BitLocker setup wizard' is set to 'Enabled: True' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting allows you to control how BitLocker-protected fixed data drives are recovered in the absence of the required credentials. This policy setting is applied when you turn on BitLocker.

Select "Omit recovery options from the BitLocker setup wizard" to prevent users from specifying recovery options when they enable BitLocker on a drive. This means that you will not be able to specify which recovery option to use when you enable BitLocker, instead BitLocker recovery options for the drive are determined by the policy setting.

The recommended state for this setting is: Enabled: True (checked).

**Rationale:**

Administrators should always have a safe, secure way to access encrypted data in the event users cannot access their data.

Additionally, as with any authentication method, a drive can be compromised by guessing or finding the authentication information used to access the drive.

To use BitLocker, a Data Recovery Agent will need to be configured for fixed drives. To recover a drive will require highly-controlled access to the Data Recovery Agent private key.

**Impact:**

The ability to manually select recovery options for fixed drives will not be presented to the user in the BitLocker setup wizard.

## Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker:FixedDrivesRecoveryOptions\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="FDVAllowDRA\_Name" value="true" /><data id="FDVRecoveryPasswordUsageDropDown\_Name" value="2" /><data id="FDVRecoveryKeyUsageDropDown\_Name" value="2" /><data id="FDVHideRecoveryPage\_Name" value="true" /><data id="FDVActiveDirectoryBackup\_Name" value="false" /><data id="FDVActiveDirectoryBackupDropDown\_Name" value="1" /><data id="FDVRequireActiveDirectoryBackup\_Name" value="false" />.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\BitLocker:FixedDrivesRecoveryOptions

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\FVE:FDVHideRecoveryPage

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Omit recovery options from the BitLocker setup wizard (checked):

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/BitLocker Drive Encryption/Fixed Data Drives
Setting Name:	Choose how BitLocker-protected fixed drives can be recovered
Configuration:	Omit recovery options from the BitLocker setup wizard (checked)

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Recovery options for fixed drives are selectable by the user in the BitLocker setup wizard.

## **CIS Controls:**

Version 7

### **13.6 Encrypt the Hard Drive of All Mobile Devices**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

**18.9.11.1.5 (BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Save BitLocker recovery information to AD DS for fixed data drives' is set to 'Enabled: False' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting allows you to control how BitLocker-protected fixed data drives are recovered in the absence of the required credentials. This policy setting is applied when you turn on BitLocker.

In "Save BitLocker recovery information to Active Directory Domain Services" choose which BitLocker recovery information to store in AD DS for fixed data drives. If you select "Backup recovery password and key package", both the BitLocker recovery password and key package are stored in AD DS. Storing the key package supports recovering data from a drive that has been physically corrupted. If you select "Backup recovery password only", only the recovery password is stored in AD DS.

The recommended state for this setting is: `Enabled: False` (unchecked).

**Rationale:**

Administrators should always have a safe, secure way to access encrypted data in the event users cannot access their data.

Additionally, as with any authentication method, a drive can be compromised by guessing or finding the authentication information used to access the drive.

To use BitLocker, a Data Recovery Agent will need to be configured for fixed drives. To recover a drive will require highly-controlled access to the Data Recovery Agent private key.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker:FixedDrivesRecoveryOptions\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\BitLocker:FixedDrivesRecoveryOptions

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\FVE:FDVActiveDirectoryBackup

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Save BitLocker recovery information to AD DS for fixed data drives (unchecked):

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path :	Computer Configuration/Windows Components/BitLocker Drive Encryption/Fixed Data Drives
Setting Name :	Choose how BitLocker-protected fixed drives can be recovered
Configuration :	Save BitLocker recovery information to AD DS for fixed data drives (unchecked)

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

BitLocker recovery information for fixed drives is not backed up to AD DS.

## **CIS Controls:**

Version 7

### **13.6 Encrypt the Hard Drive of All Mobile Devices.**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

**18.9.11.1.6 (BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Configure storage of BitLocker recovery information to AD DS' is set to 'Enabled: Backup recovery passwords and key packages' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting allows you to control how BitLocker-protected fixed data drives are recovered in the absence of the required credentials. This policy setting is applied when you turn on BitLocker.

In "Save BitLocker recovery information to Active Directory Domain Services" choose which BitLocker recovery information to store in AD DS for fixed data drives. If you select "Backup recovery password and key package", both the BitLocker recovery password and key package are stored in AD DS. Storing the key package supports recovering data from a drive that has been physically corrupted. If you select "Backup recovery password only", only the recovery password is stored in AD DS.

The recommended state for this setting is: Enabled: Backup recovery passwords and key packages.

**Rationale:**

Administrators should always have a safe, secure way to access encrypted data in the event users cannot access their data.

Additionally, as with any authentication method, a drive can be compromised by guessing or finding the authentication information used to access the drive.

To use BitLocker, a Data Recovery Agent will need to be configured for fixed drives. To recover a drive will require highly-controlled access to the Data Recovery Agent private key.

## **Impact:**

None - this value is ignored when the checkbox above it (*Save BitLocker recovery information to AD DS for fixed data drives*) is False (unchecked), as is required in Rule 18.9.11.1.7. If that checkbox is set to True (checked), both recovery passwords and key packages for fixed drives will be saved to AD DS.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker:  
FixedDrivesRecoveryOptions_ProviderSet
```

## **To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="FDVAllowDRA\_Name" value="true" /><data id="FDVRecoveryPasswordUsageDropDown\_Name" value="2" /><data id="FDVRecoveryKeyUsageDropDown\_Name" value="2" /><data id="FDVHideRecoveryPage\_Name" value="true" /><data id="FDVActiveDirectoryBackup\_Name" value="false" /><data id="FDVActiveDirectoryBackupDropDown\_Name" value="1" /><data id="FDVRequireActiveDirectoryBackup\_Name" value="false" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
BitLocker:FixedDrivesRecoveryOptions
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\FVE:FDVActiveDirectoryInfoToSt  
ore
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Backup recovery passwords and key packages:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/BitLocker Drive Encryption/Fixed Data Drives
Setting Name:	Choose how BitLocker-protected fixed drives can be recovered
Configuration:	Select Backup recovery passwords and key packages

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

BitLocker recovery information for fixed drives is not backed up to AD DS.

## **CIS Controls:**

Version 7

### **13.6 Encrypt the Hard Drive of All Mobile Devices**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

**18.9.11.1.7 (BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Do not enable BitLocker until recovery information is stored to AD DS for fixed data drives' is set to 'Enabled: False'**  
**(Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting allows you to control how BitLocker-protected fixed data drives are recovered in the absence of the required credentials. This policy setting is applied when you turn on BitLocker.

Select the "Do not enable BitLocker until recovery information is stored in AD DS for fixed data drives" check box if you want to prevent users from enabling BitLocker unless the computer is connected to the domain and the backup of BitLocker recovery information to AD DS succeeds.

**Note:** If the "Do not enable BitLocker until recovery information is stored in AD DS for fixed data drives" check box is selected, a recovery password is automatically generated.

The recommended state for this setting is: Enabled: False (unchecked).

**Rationale:**

Administrators should always have a safe, secure way to access encrypted data in the event users cannot access their data.

Additionally, as with any authentication method, a drive can be compromised by guessing or finding the authentication information used to access the drive.

To use BitLocker, a Data Recovery Agent will need to be configured for fixed drives. To recover a drive will require highly-controlled access to the Data Recovery Agent private key.

**Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker:  
FixedDrivesRecoveryOptions\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="FDVAllowDRA\_Name" value="true" /><data id="FDVRecoveryPasswordUsageDropDown\_Name" value="2" /><data id="FDVRecoveryKeyUsageDropDown\_Name" value="2" /><data id="FDVHideRecoveryPage\_Name" value="true" /><data id="FDVActiveDirectoryBackup\_Name" value="false" /><data id="FDVActiveDirectoryBackupDropDown\_Name" value="1" /><data id="FDVRequireActiveDirectoryBackup\_Name" value="false" />.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\BitLocker:FixedDrivesRecoveryOptions

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\FVE:FDVRequireActiveDirectoryBackup

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Do not enable BitLocker until recovery information is stored to AD DS for fixed data drives (unchecked):

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path :	Computer Configuration/Windows Components/BitLocker Drive Encryption/Fixed Data Drives
Setting Name :	Choose how BitLocker-protected fixed drives can be recovered
Configuration :	Uncheck Do not enable BitLocker until recovery information is stored to AD DS for fixed data drives

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

BitLocker can be enabled on fixed drives without the requirement of storing recovery information to Active Directory first.

## **CIS Controls:**

Version 7

### **13.6 Encrypt the Hard Drive of All Mobile Devices.**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

## **18.9.11.2 Operating System Drives**

This section contains recommendations for configuring Operating System Drives in BitLocker.

This Group Policy section is provided by the Group Policy template `VolumeEncryption.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

### ***18.9.11.2.1 (BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

#### **Description:**

This policy setting allows you to control how BitLocker-protected operating system drives are recovered in the absence of the required startup key information. This policy setting is applied when you turn on BitLocker.

The "Allow certificate-based data recovery agent" check box is used to specify whether a Data Recovery Agent can be used with BitLocker-protected operating system drives. Before a Data Recovery Agent can be used it must be added from the Public Key Policies item in either the Group Policy Management Console or the Local Group Policy Editor. Consult the BitLocker Drive Encryption Deployment Guide on Microsoft TechNet for more information about adding Data Recovery Agents.

In "Configure user storage of BitLocker recovery information" select whether users are allowed, required, or not allowed to generate a 48-digit recovery password or a 256-bit recovery key.

Select "Omit recovery options from the BitLocker setup wizard" to prevent users from specifying recovery options when they enable BitLocker on a drive. This means that you will not be able to specify which recovery option to use when you enable BitLocker, instead BitLocker recovery options for the drive are determined by the policy setting.

In "Save BitLocker recovery information to Active Directory Domain Services", choose which BitLocker recovery information to store in AD DS for operating system drives. If you select "Backup recovery password and key package", both the BitLocker recovery password and key package are stored in AD DS. Storing the key package supports recovering data from a drive that has been physically corrupted. If you select "Backup recovery password only", only the recovery password is stored in AD DS.

Select the "Do not enable BitLocker until recovery information is stored in AD DS for operating system drives" check box if you want to prevent users from enabling BitLocker unless the computer is connected to the domain and the backup of BitLocker recovery information to AD DS succeeds.

**Note:** If the "Do not enable BitLocker until recovery information is stored in AD DS for operating system drives" check box is selected, a recovery password is automatically generated.

The recommended state for this setting is: Enabled.

#### **Rationale:**

Should a user lose their primary means for accessing an encrypted OS volume, or should the system not pass its boot time integrity checks, the system will go into recovery mode. If the recovery key has not been backed up to Active Directory, the user would need to have saved the recovery key to another location such as a USB flash drive, or have printed the recovery password, and now have access to one of those in order to recover the system. If the user is unable to produce the recovery key, then the user will be denied access to the encrypted volume and subsequently any data that is stored there.

#### **Impact:**

Users will need to be domain connected to turn on BitLocker. This policy is not FIPS complaint.

## Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker: SystemDrivesRecoveryOptions\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="OSAllowDRA\_Name" value="false" /><data id="OSRecoveryPasswordUsageDropDown\_Name" value="2" /><data id="OSRecoveryKeyUsageDropDown\_Name" value="0" /><data id="OSHideRecoveryPage\_Name" value="true" /><data id="OSActiveDirectoryBackup\_Name" value="true" /><data id="OSActiveDirectoryBackupDropDown\_Name" value="1" /><data id="OSRequireActiveDirectoryBackup\_Name" value="true" />.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\BitLocker: SystemDrivesRecoveryOptions\_ProviderSet

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\FVE:OSRecovery

## **Remediation:**

To establish the recommended configuration via GP, set the following UI path to Enabled:  
To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Save BitLocker recovery information to AD DS for operation system drives (checked):

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/BitLocker Drive Encryption/Operating System Drives
Setting Name:	Choose how BitLocker-protected operating system drives can be recovered
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Disabled. (The default recovery options are supported for BitLocker recovery - a DRA is allowed, and the recovery options can be specified by the user including the recovery password and recovery key, and recovery information is not backed up to AD DS.)

**CIS Controls:**

Version 7

**13.6 Encrypt the Hard Drive of All Mobile Devices.**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

**18.9.11.2.2 (BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Allow data recovery agent' is set to 'Enabled: False' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting allows you to control how BitLocker-protected operating system drives are recovered in the absence of the required startup key information. This policy setting is applied when you turn on BitLocker.

The "Allow certificate-based data recovery agent" check box is used to specify whether a Data Recovery Agent can be used with BitLocker-protected operating system drives. Before a Data Recovery Agent can be used it must be added from the Public Key Policies item in either the Group Policy Management Console or the Local Group Policy Editor. Consult the BitLocker Drive Encryption Deployment Guide on Microsoft TechNet for more information about adding Data Recovery Agents.

The recommended state for this setting is: Enabled: False (unchecked).

**Rationale:**

Should a user lose their primary means for accessing an encrypted OS volume, or should the system not pass its boot time integrity checks, the system will go into recovery mode. If the recovery key has not been backed up to Active Directory, the user would need to have saved the recovery key to another location such as a USB flash drive, or have printed the recovery password, and now have access to one of those in order to recover the system. If the user is unable to produce the recovery key, then the user will be denied access to the encrypted volume and subsequently any data that is stored there.

**Impact:**

A Data Recovery Agent will not be permitted for the operating system drive. Users will need to be domain connected to turn on BitLocker. This policy is not FIPS complaint.

## Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker: SystemDrivesRecoveryOptions\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="OSAllowDRA\_Name" value="false" /><data id="OSRecoveryPasswordUsageDropDown\_Name" value="2" /><data id="OSRecoveryKeyUsageDropDown\_Name" value="0" /><data id="OSHideRecoveryPage\_Name" value="true" /><data id="OSActiveDirectoryBackup\_Name" value="true" /><data id="OSActiveDirectoryBackupDropDown\_Name" value="1" /><data id="OSRequireActiveDirectoryBackup\_Name" value="true" />.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\BitLocker: SystemDrivesRecoveryOptions\_ProviderSet

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\FVE:OSManageDRA

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Allow data recovery agent Enabled: False:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/BitLocker Drive Encryption/Operating System Drives
Setting Name:	Choose how BitLocker-protected operating system drives can be recovered
Configuration:	Allow data recovery agent (Unchecked)

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Enabled: True. (A DRA is allowed.)

## **CIS Controls:**

Version 7

### **13.6 Encrypt the Hard Drive of All Mobile Devices.**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

**18.9.11.2.3 (BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Recovery Password' is set to 'Enabled: Require 48-digit recovery password' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting allows you to control how BitLocker-protected operating system drives are recovered in the absence of the required startup key information. This policy setting is applied when you turn on BitLocker.

In "Configure user storage of BitLocker recovery information" select whether users are allowed, required, or not allowed to generate a 48-digit recovery password or a 256-bit recovery key.

The recommended state for this setting is: Enabled: Require 48-digit recovery password.

**Rationale:**

Should a user lose their primary means for accessing an encrypted OS volume, or should the system not pass its boot time integrity checks, the system will go into recovery mode. If the recovery key has not been backed up to Active Directory, the user would need to have saved the recovery key to another location such as a USB flash drive, or have printed the recovery password, and now have access to one of those in order to recover the system. If the user is unable to produce the recovery key, then the user will be denied access to the encrypted volume and subsequently any data that is stored there.

**Impact:**

A 48-digit recovery password will be required for the operating system drive. Users will need to be domain connected to turn on BitLocker. This policy is not FIPS complaint.

## Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker: SystemDrivesRecoveryOptions\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="OSAllowDRA\_Name" value="false" /><data id="OSRecoveryPasswordUsageDropDown\_Name" value="2" /><data id="OSRecoveryKeyUsageDropDown\_Name" value="0" /><data id="OSHideRecoveryPage\_Name" value="true" /><data id="OSActiveDirectoryBackup\_Name" value="true" /><data id="OSActiveDirectoryBackupDropDown\_Name" value="1" /><data id="OSRequireActiveDirectoryBackup\_Name" value="true" />.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\BitLocker: SystemDrivesRecoveryOptions\_ProviderSet

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 2.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\FVE:OSRecoveryPassword

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Require 48-digit recovery password:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/BitLocker Drive Encryption/Operating System Drives
Setting Name:	Choose how BitLocker-protected operating system drives can be recovered
Configuration:	Require 48-digit recovery password

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Recovery options are specified by the user.

## **CIS Controls:**

Version 7

### **13.6 Encrypt the Hard Drive of All Mobile Devices**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

**18.9.11.2.4 (BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Recovery Key' is set to 'Enabled: Do not allow 256-bit recovery key' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting allows you to control how BitLocker-protected operating system drives are recovered in the absence of the required startup key information. This policy setting is applied when you turn on BitLocker.

In "Configure user storage of BitLocker recovery information" select whether users are allowed, required, or not allowed to generate a 48-digit recovery password or a 256-bit recovery key.

The recommended state for this setting is: Enabled: Do not allow 256-bit recovery key.

**Rationale:**

Should a user lose their primary means for accessing an encrypted OS volume, or should the system not pass its boot time integrity checks, the system will go into recovery mode. If the recovery key has not been backed up to Active Directory, the user would need to have saved the recovery key to another location such as a USB flash drive, or have printed the recovery password, and now have access to one of those in order to recover the system. If the user is unable to produce the recovery key, then the user will be denied access to the encrypted volume and subsequently any data that is stored there.

**Impact:**

A 256-bit recovery key will not be permitted for the operating system drive. Users will need to be domain connected to turn on BitLocker. This policy is not FIPS complaint.

## Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker:  
SystemDrivesRecoveryOptions_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="OSAllowDRA\_Name" value="false" /><data id="OSRecoveryPasswordUsageDropDown\_Name" value="2" /><data id="OSRecoveryKeyUsageDropDown\_Name" value="0" /><data id="OSHideRecoveryPage\_Name" value="true" /><data id="OSActiveDirectoryBackup\_Name" value="true" /><data id="OSActiveDirectoryBackupDropDown\_Name" value="1" /><data id="OSRequireActiveDirectoryBackup\_Name" value="true" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
BitLocker: SystemDrivesRecoveryOptions_ProviderSet
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\FVE:OSRecoveryKey
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Do not allow 256-bit recovery key:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/BitLocker Drive Encryption/Operating System Drives
Setting Name:	Choose how BitLocker-protected operating system drives can be recovered
Configuration:	Do not allow 256-bit recovery key

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Recovery options are specified by the user.

## **CIS Controls:**

Version 7

### **13.6 Encrypt the Hard Drive of All Mobile Devices**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

**18.9.11.2.5 (BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Omit recovery options from the BitLocker setup wizard' is set to 'Enabled: True' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting allows you to control how BitLocker-protected operating system drives are recovered in the absence of the required startup key information. This policy setting is applied when you turn on BitLocker.

Select "Omit recovery options from the BitLocker setup wizard" to prevent users from specifying recovery options when they enable BitLocker on a drive. This means that you will not be able to specify which recovery option to use when you enable BitLocker, instead BitLocker recovery options for the drive are determined by the policy setting.

The recommended state for this setting is: Enabled: True (checked).

**Rationale:**

Should a user lose their primary means for accessing an encrypted OS volume, or should the system not pass its boot time integrity checks, the system will go into recovery mode. If the recovery key has not been backed up to Active Directory, the user would need to have saved the recovery key to another location such as a USB flash drive, or have printed the recovery password, and now have access to one of those in order to recover the system. If the user is unable to produce the recovery key, then the user will be denied access to the encrypted volume and subsequently any data that is stored there.

**Impact:**

The ability to manually select recovery options for the operating drive will not be presented to the user in the BitLocker setup wizard.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker: SystemDrivesRecoveryOptions\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="OSAllowDRA\_Name" value="false" /><data id="OSRecoveryPasswordUsageDropDown\_Name" value="2" /><data id="OSRecoveryKeyUsageDropDown\_Name" value="0" /><data id="OSHideRecoveryPage\_Name" value="true" /><data id="OSActiveDirectoryBackup\_Name" value="true" /><data id="OSActiveDirectoryBackupDropDown\_Name" value="1" /><data id="OSRequireActiveDirectoryBackup\_Name" value="true" />.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\BitLocker: SystemDrivesRecoveryOptions\_ProviderSet

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\FVE:OSHideRecoveryPage

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Omit recovery options from the BitLocker setup wizard:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/BitLocker Drive Encryption/Operating System Drives
Setting Name:	Choose how BitLocker-protected operating system drives can be recovered
Configuration:	Omit recovery options from the BitLocker setup wizard (checked)

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Recovery options for the operating system drive are selectable by the user in the BitLocker setup wizard.

## **CIS Controls:**

Version 7

### **13.6 Encrypt the Hard Drive of All Mobile Devices.**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

**18.9.11.2.6 (BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Save BitLocker recovery information to AD DS for operating system drives' is set to 'Enabled: True' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting allows you to control how BitLocker-protected operating system drives are recovered in the absence of the required startup key information. This policy setting is applied when you turn on BitLocker.

In "Save BitLocker recovery information to Active Directory Domain Services", choose which BitLocker recovery information to store in AD DS for operating system drives. If you select "Backup recovery password and key package", both the BitLocker recovery password and key package are stored in AD DS. Storing the key package supports recovering data from a drive that has been physically corrupted. If you select "Backup recovery password only", only the recovery password is stored in AD DS.

The recommended state for this setting is: Enabled: True (checked).

**Rationale:**

Should a user lose their primary means for accessing an encrypted OS volume, or should the system not pass its boot time integrity checks, the system will go into recovery mode. If the recovery key has not been backed up to Active Directory, the user would need to have saved the recovery key to another location such as a USB flash drive, or have printed the recovery password, and now have access to one of those in order to recover the system. If the user is unable to produce the recovery key, then the user will be denied access to the encrypted volume and subsequently any data that is stored there.

**Impact:**

BitLocker recovery information for the operating system drive will be backed up to AD DS. Users will need to be domain connected to turn on BitLocker. This policy is not FIPS complaint.

## Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker: SystemDrivesRecoveryOptions\_ProviderSet

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\FVE:OSActiveDirectoryInfoToSto  
re
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Store recovery passwords and key packages:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/BitLocker Drive Encryption/Operating System Drives
Setting Name:	Choose how BitLocker-protected operating system drives can be recovered
Configuration:	Store recovery passwords and key packages

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

BitLocker recovery information for the operating system drive is not backed up to AD DS.

## **CIS Controls:**

Version 7

### **13.6 Encrypt the Hard Drive of All Mobile Devices.**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

**18.9.11.2.8 (BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Do not enable BitLocker until recovery information is stored to AD DS for operating system drives' is set to 'Enabled: True' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting allows you to control how BitLocker-protected operating system drives are recovered in the absence of the required startup key information. This policy setting is applied when you turn on BitLocker.

Select the "Do not enable BitLocker until recovery information is stored in AD DS for operating system drives" check box if you want to prevent users from enabling BitLocker unless the computer is connected to the domain and the backup of BitLocker recovery information to AD DS succeeds.

**Note:** If the "Do not enable BitLocker until recovery information is stored in AD DS for operating system drives" check box is selected, a recovery password is automatically generated.

The recommended state for this setting is: Enabled: True (checked).

**Rationale:**

Should a user lose their primary means for accessing an encrypted OS volume, or should the system not pass its boot time integrity checks, the system will go into recovery mode. If the recovery key has not been backed up to Active Directory, the user would need to have saved the recovery key to another location such as a USB flash drive, or have printed the recovery password, and now have access to one of those in order to recover the system. If the user is unable to produce the recovery key, then the user will be denied access to the encrypted volume and subsequently any data that is stored there.

## **Impact:**

Users will need to be domain connected and the back up of BitLocker recovery information for the operating system drive must succeed in order to turn on BitLocker. This policy is not FIPS complaint.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker:  
SystemDrivesRecoveryOptions_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="OSAllowDRA\_Name" value="false" /><data id="OSRecoveryPasswordUsageDropDown\_Name" value="2" /><data id="OSRecoveryKeyUsageDropDown\_Name" value="0" /><data id="OSHideRecoveryPage\_Name" value="true" /><data id="OSActiveDirectoryBackup\_Name" value="true" /><data id="OSActiveDirectoryBackupDropDown\_Name" value="1" /><data id="OSRequireActiveDirectoryBackup\_Name" value="true" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
BitLocker:SystemDrivesRecoveryOptions_ProviderSet
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\FVE:OSRequireActiveDirectoryBa  
ckup
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Do not enable BitLocker until recovery information is stored to AD DS for operating system drives (checked):

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path :	Computer Configuration/Windows Components/BitLocker Drive Encryption/Operating System Drives
Setting Name :	Choose how BitLocker-protected operating system drives can be recovered
Configuration :	Do not enable BitLocker until recovery information is stored to AD DS for operating system drives` (checked)

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

BitLocker can be enabled on the operating system drive without the requirement of storing recovery information to Active Directory first.

**CIS Controls:**

Version 7

**13.6 Encrypt the Hard Drive of All Mobile Devices.**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

### **18.9.11.2.9 (BL) Ensure 'Require additional authentication at startup' is set to 'Enabled' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

#### **Description:**

This policy setting allows you to configure whether BitLocker requires additional authentication each time the computer starts and whether you are using BitLocker with or without a Trusted Platform Module (TPM). This policy setting is applied when you turn on BitLocker.

**Note:** Only one of the additional authentication options can be required at startup, otherwise a policy error occurs.

If you want to use BitLocker on a computer without a TPM, select the "Allow BitLocker without a compatible TPM" check box. In this mode a USB drive is required for start-up and the key information used to encrypt the drive is stored on the USB drive, creating a USB key. When the USB key is inserted the access to the drive is authenticated and the drive is accessible. If the USB key is lost or unavailable you will need to use one of the BitLocker recovery options to access the drive.

On a computer with a compatible TPM, four types of authentication methods can be used at startup to provide added protection for encrypted data. When the computer starts, it can use only the TPM for authentication, or it can also require insertion of a USB flash drive containing a startup key, the entry of a 4-digit to 20-digit personal identification number (PIN), or both.

Users can configure advanced startup options in the BitLocker setup wizard.

**Note #2:** If you want to require the use of a startup PIN and a USB flash drive, you must configure BitLocker settings using the command-line tool `manage-bde` instead of the BitLocker Drive Encryption setup wizard.

The recommended state for this setting is: Enabled.

### **Rationale:**

TPM without use of a PIN will only validate early boot components and does not require a user to enter any additional authentication information. If a computer is lost or stolen in this configuration, BitLocker will not provide any additional measure of protection beyond what is provided by native Windows authentication unless the early boot components are tampered with or the encrypted drive is removed from the machine.

### **Impact:**

A PIN requires physical presence to restart the computer. This functionality is not compatible with Wake on LAN solutions.

### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker:  
SystemDrivesRequireStartupAuthentication_ProviderSet
```

### **To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="ConfigureNonTPMStartupKeyUsage\_Name" value="false" /><data id="ConfigureTPMUsageDropDown\_Name" value="2" /><data id="ConfigurePINUsageDropDown\_Name" value="2" /><data id="ConfigureTPMStartupKeyUsageDropDown\_Name" value="2" /><data id="ConfigureTPMPINKeyUsageDropDown\_Name" value="2" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
BitLocker: SystemDrivesRequireStartupAuthentication
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\FVE:UseAdvancedStartup
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/BitLocker Drive Encryption/Operating System Drives
Setting Name:	Require additional authentication at startup
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Disabled. (Users can configure only basic options on computers with a TPM.)

## **CIS Controls:**

Version 7

### **16.3 Require Multi-factor Authentication**

Require multi-factor authentication for all user accounts, on all systems, whether managed onsite or by a third-party provider.

**18.9.11.2.10 (BL) Ensure 'Require additional authentication at startup: Allow BitLocker without a compatible TPM' is set to 'Enabled: False' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting allows you to configure whether you can use BitLocker without a Trusted Platform Module (TPM), instead using a password or startup key on a USB flash drive. This policy setting is applied when you turn on BitLocker.

The recommended state for this setting is: Enabled: False (unchecked).

**Rationale:**

TPM without use of a PIN will only validate early boot components and does not require a user to enter any additional authentication information. If a computer is lost or stolen in this configuration, BitLocker will not provide any additional measure of protection beyond what is provided by native Windows authentication unless the early boot components are tampered with or the encrypted drive is removed from the machine.

**Impact:**

A compatible TPM will be required in order to use BitLocker.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker:  
SystemDrivesRequireStartupAuthentication\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="ConfigureNonTPMStartupKeyUsage\_Name" value="false" /><data id="ConfigureTPMUsageDropDown\_Name" value="2" /><data id="ConfigurePINUsageDropDown\_Name" value="2" /><data id="ConfigureTPMStartupKeyUsageDropDown\_Name" value="2" /><data id="ConfigureTPMPINKeyUsageDropDown\_Name" value="2" />.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\BitLocker:SystemDrivesRequireStartupAuthentication

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\FVE:EnableBDEWithNoTPM

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Allow BitLocker without a compatible TPM (requires a password or a startup key on USB flash drive) (unchecked):

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path :	Computer Configuration/Windows Components/BitLocker Drive Encryption/Operating System Drives
Setting Name:	Require additional authentication at startup
Configuration:	Allow BitLocker without a compatible TPM (requires a password or a startup key on USB flash drive) - Unchecked

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

True (checked). (Users can use BitLocker without a compatible TPM by using a password or startup key on a USB flash drive.)

**CIS Controls:**

Version 7

**13.6 Encrypt the Hard Drive of All Mobile Devices.**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

**13.8 Manage System's External Removable Media's Read/write Configurations**

Configure systems not to write data to external removable media, if there is no business need for supporting such devices.

### **18.9.11.3 Removable Data Drives**

This section contains recommendations for configuring Removable Data Drives in BitLocker.

This Group Policy section is provided by the Group Policy template `VolumeEncryption.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

#### ***18.9.11.3.1 (BL) Ensure 'Deny write access to removable drives not protected by BitLocker' is set to 'Enabled' (Automated)***

##### **Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

##### **Description:**

This policy setting configures whether BitLocker protection is required for a computer to be able to write data to a removable data drive.

All removable data drives that are not BitLocker-protected will be mounted as read-only. If the drive is protected by BitLocker, it will be mounted with read and write access.

The recommended state for this setting is: Enabled.

##### **Rationale:**

Users may not voluntarily encrypt removable drives prior to saving important data to the drive.

##### **Impact:**

All removable data drives that are not BitLocker-protected will be mounted as read-only. If the drive is protected by BitLocker, it will be mounted with read and write access.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker:  
RemovableDrivesRequireEncryption_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="RDVCrossOrg" value="false" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
BitLocker:RemovableDrivesRequireEncryption_ProviderSet
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Policies\Microsoft\FVE:RDVDenyWri  
teAccess
```

## **Remediation:**

To establish the recommended configuration via GP, set the following UI path to Enabled:  
To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path :	Computer Configuration/Windows Components/BitLocker Drive Encryption/Removable Data Drives
Setting Name :	Deny write access to removable drives not protected by BitLocker
Configuration :	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Disabled. (All removable data drives on the computer will be mounted with read and write access.)

**CIS Controls:**

Version 7

**13.6 Encrypt the Hard Drive of All Mobile Devices.**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

**13.8 Manage System's External Removable Media's Read/write Configurations**

Configure systems not to write data to external removable media, if there is no business need for supporting such devices.

**18.9.11.3.2 (BL) Ensure 'Deny write access to removable drives not protected by BitLocker: Do not allow write access to devices configured in another organization' is set to 'Enabled: False' (Automated)**

**Profile Applicability:**

- Level 1 (L1) + BitLocker (BL)
- Level 2 (L2) + BitLocker (BL)
- BitLocker (BL) - optional add-on for when BitLocker is deployed

**Description:**

This policy setting configures whether the computer will be able to write data to BitLocker-protected removable drives that were configured in another organization.

The recommended state for this setting is: Enabled: False (unchecked).

**Rationale:**

Restricting write access to BitLocker-protected removable drives that were configured in another organization can hinder legitimate business operations where encrypted data sharing is necessary.

**Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\BitLocker:RemovableDrivesRequireEncryption\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="RDVCrossOrg" value="false" />.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\BitLocker:RemovableDrivesRequireEncryption\_ProviderSet

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\FVE:RDVDenyCrossOrg

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Do not allow write access to devices configured in another organization (unchecked):

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path :	Computer Configuration/Windows Components/BitLocker Drive Encryption/Removable Data Drives
Setting Name :	Deny write access to removable drives not protected by BitLocker
Configuration :	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2:** This recommendation can also be set using the *Endpoint protection* profile using *Windows Encryption* settings.

## **Default Value:**

Enabled: False (unchecked). (Write access will be permitted to BitLocker-protected removable drives that were configured in another organization.)

**CIS Controls:**

Version 7

**13.6 Encrypt the Hard Drive of All Mobile Devices.**

Utilize approved whole disk encryption software to encrypt the hard drive of all mobile devices.

**13.8 Manage System's External Removable Media's Read/write Configurations**

Configure systems not to write data to external removable media, if there is no business need for supporting such devices.

## **18.9.12 Camera**

This section contains recommendations related to Camera.

This Group Policy section is provided by the Group Policy template `Camera.admx/adml` that is included with the Microsoft Windows 10 Release 1607 & Server 2016 Administrative Templates (or newer).

### ***18.9.12.1 (L2) Ensure 'Allow Use of Camera' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

#### **Description:**

This policy setting controls whether the use of Camera devices on the machine are permitted.

The recommended state for this setting is: Disabled.

#### **Rationale:**

Cameras in a high security environment can pose serious privacy and data exfiltration risks - they should be disabled to help mitigate that risk.

#### **Impact:**

Users will not be able to utilize the camera on a system.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Camera:AllowCamera\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\Camera:AllowCamera

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Camera/AllowCamera
Data type:	Integer
Value:	1

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (Camera devices are enabled.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **18.9.13 Cloud Content**

This section contains recommendations related to Cloud Content.

This Group Policy section is provided by the Group Policy template `CloudContent.admx/adml` that is included with the Microsoft Windows 10 Release 1511 Administrative Templates (or newer).

### ***18.9.13.1 (L1) Ensure 'Turn off Microsoft consumer experiences' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting turns off experiences that help consumers make the most of their devices and Microsoft account.

The recommended state for this setting is: Enabled.

**Note:** [Per Microsoft TechNet](#), this policy setting only applies to Windows 10 Enterprise and Windows 10 Education editions.

#### **Rationale:**

Having apps silently install in an enterprise managed environment is not good security practice - especially if the apps send data back to a 3rd party.

#### **Impact:**

Users will no longer see personalized recommendations from Microsoft and notifications about their Microsoft account.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Experience :AllowWindowsConsumerFeatures\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Experience:AllowWindowsConsumerFeatures

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Wifi/AllowAutoConnect
          ToWiFiSenseHotspots
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users may see suggestions from Microsoft and notifications about their Microsoft account.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.9.14 Connect**

This section contains recommendations related to Connect.

This Group Policy section is provided by the Group Policy template `WirelessDisplay.admx/adml` that is included with the Microsoft Windows 10 Release 1607 & Server 2016 Administrative Templates (or newer).

### ***18.9.14.1 (L1) Ensure 'Require pin for pairing' is set to 'Enabled: First Time' OR 'Enabled: Always' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting controls whether or not a PIN is required for pairing to a wireless display device.

The recommended state for this setting is: Enabled: First Time OR Enabled: Always.

#### **Rationale:**

If this setting is not configured or disabled then a PIN would not be required when pairing wireless display devices to the system, increasing the risk of unauthorized use.

#### **Impact:**

The pairing ceremony for connecting to new wireless display devices will always require a PIN.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\WirelessDisplay:RequirePinForPairing\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1 or 2.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\WirelessDisplay:RequirePinForPairing

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: First Time OR Enabled: Always:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/WirelessDisplay/Require
          PinForPairing
Data type: Integer
Value: 1 OR 2
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (A PIN is not required for pairing to a wireless display device.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **18.9.15 Credential User Interface**

This section contains recommendations related to the Credential User Interface.

This Group Policy section is provided by the Group Policy template `CredUI.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.9.15.1 (L1) Ensure 'Do not display the password reveal button' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting allows you to configure the display of the password reveal button in password entry user experiences.

The recommended state for this setting is: `Enabled`.

#### **Rationale:**

This is a useful feature when entering a long and complex password, especially when using a touchscreen. The potential risk is that someone else may see your password while surreptitiously observing your screen.

#### **Impact:**

The password reveal button will not be displayed after a user types a password in the password entry text box.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Credential  
sUI:DisablePasswordReveal_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
CredentialsUI:DisablePasswordReveal
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\CredUI:DisablePassword  
Reveal
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Credential User Interface
Setting Name:	Do not display the password reveal button
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (The password reveal button is displayed after a user types a password in the password entry text box. If the user clicks on the button, the typed password is displayed on-screen in plain text.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**18.9.15.2 (L1) Ensure 'Enumerate administrator accounts on elevation' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting controls whether administrator accounts are displayed when a user attempts to elevate a running application.

The recommended state for this setting is: Disabled.

**Rationale:**

Users could see the list of administrator accounts, making it slightly easier for a malicious user who has logged onto a console session to try to crack the passwords of those accounts.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Credential  
sUI:EnumerateAdministrators_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
CredentialsUI:EnumerateAdministrators
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\CredUI:  
EnumerateAdministrators
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Credential User Interface
Setting Name:	Enumerate administrator accounts on elevation
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users will be required to always type in a username and password to elevate.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **18.9.16 Data Collection and Preview Builds**

This section contains settings for Data Collection and Preview Builds.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with the Microsoft Windows 10 RTM (Release 1507) Administrative Templates (or newer).

### ***18.9.16.1 (L1) Ensure 'Allow Telemetry' is set to 'Enabled: 0 - Security [Enterprise Only]' or 'Enabled: 1 - Basic' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting determines the amount of diagnostic and usage data reported to Microsoft:

- A value of `0 - Security [Enterprise Only]` will send minimal data to Microsoft. This data includes Malicious Software Removal Tool (MSRT) & Microsoft Defender Antivirus data, if enabled, and telemetry client settings. Setting a value of 0 applies to enterprise, EDU, IoT and server devices only. Setting a value of 0 for other devices is equivalent to choosing a value of 1.
- A value of `1 - Basic` sends only a basic amount of diagnostic and usage data. Note that setting values of 0 or 1 will degrade certain experiences on the device.
- A value of `2 - Enhanced` sends enhanced diagnostic and usage data.
- A value of `3 - Full` sends the same data as a value of 2, plus additional diagnostics data, including the files and content that may have caused the problem.

Windows 10 telemetry settings apply to the Windows operating system and some first party apps. This setting does not apply to third party apps running on Windows 10.

The recommended state for this setting is: `Enabled: 0 - Security [Enterprise Only]` or `Enabled: 1 - Basic`.

**Note:** If the *Allow Telemetry* setting is configured to 0 – Security [Enterprise Only], then the options in Windows Update to defer upgrades and updates will have no effect.

**Note #2:** In the Microsoft Windows 10 RTM (Release 1507) Administrative Templates, the zero value was initially named 0 – Off [Enterprise Only], but it was renamed to 0 – Security [Enterprise Only] starting with the Windows 10 Release 1511 Administrative Templates.

#### Rationale:

Sending any data to a 3rd party vendor is a security concern and should only be done on an as needed basis.

#### Impact:

Note that setting values of 0 or 1 will degrade certain experiences on the device.

#### Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\System:AllowTelemetry\_ProviderSet

#### To confirm that the policy was properly applied to the system, check the following location:

Navigate to the following registry location and confirm it is set to 0 or 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\System:AllowTelemetry

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: 0 – Security [Enterprise Only] OR Enabled: 1 – Basic

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/System/AllowTelemetry
Data type: Integer
Value: 0 OR 1
```

## **Default Value:**

Disabled. (Users can configure the Telemetry level in Settings.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

**18.9.16.2 (L2) Ensure 'Configure Authenticated Proxy usage for the Connected User Experience and Telemetry service' is set to 'Enabled: Disable Authenticated Proxy usage' (Automated)**

**Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

**Description:**

This policy setting controls whether the Connected User Experience and Telemetry service can automatically use an authenticated proxy to send data back to Microsoft.

The recommended state for this setting is: Enabled: Disable Authenticated Proxy usage.

**Rationale:**

Sending any data to a 3rd party vendor is a security concern and should only be done on an as needed basis.

**Impact:**

The Connected User Experience and Telemetry service will be blocked from automatically using an authenticated proxy.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\System:DisableEnterpriseAuthProxy\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\System:DisableEnterpriseAuthProxy

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Disable Authenticated Proxy usage:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/System/DisableEnterpriseAuthProxy
Data type:	Integer
Value:	1

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (The Connected User Experience and Telemetry service will automatically use an authenticated proxy to send data back to Microsoft.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

### **18.9.16.3 (L1) Ensure 'Do not show feedback notifications' is set to 'Enabled' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting allows an organization to prevent its devices from showing feedback questions from Microsoft.

The recommended state for this setting is: Enabled.

#### **Rationale:**

Users should not be sending any feedback to 3rd party vendors in an enterprise managed environment.

#### **Impact:**

Users will no longer see feedback notifications through the Windows Feedback app.

#### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Experience  
:DoNotShowFeedbackNotifications_ProviderSet
```

#### **To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
Experience:DoNotShowFeedbackNotifications
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Experience/DoNotShowFeedbackNotifications
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users may see notifications through the Windows Feedback app asking users for feedback. Users can control how often they receive feedback questions.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

**18.9.16.4 (L1) Ensure 'Toggle user control over Insider builds' is set to 'Disabled' (Manual)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting determines whether users can access the Insider build controls in the Advanced Options for Windows Update. These controls are located under "Get Insider builds," and enable users to make their devices available for downloading and installing Windows preview software.

The recommended state for this setting is: Disabled.

**Note:** This policy setting applies only to devices running Windows 10 Pro or Windows 10 Enterprise, up until Release 1703. For Release 1709 or newer, Microsoft encourages using the Manage preview builds setting (Rule 18.9.102.1.1). We have kept this setting in the benchmark to ensure that any older builds of Windows 10 in the environment are still enforced.

**Rationale:**

It can be risky for experimental features to be allowed in an enterprise managed environment because this can introduce bugs and security holes into systems, making it easier for an attacker to gain access. It is generally preferred to only use production-ready builds.

**Impact:**

The item "Get Insider builds" will be unavailable.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\System:AllowBuildPreview\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\System:AllowBuildPreview

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/System/AllowBuildPreview
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (Users can download and install Windows preview software on their devices.)

## **CIS Controls:**

Version 7

### **2.6 Address unapproved software**

Ensure that unauthorized software is either removed or the inventory is updated in a timely manner

## **18.9.17 Delivery Optimization**

This section contains settings for Delivery Optimization.

This Group Policy section is provided by the Group Policy template `DeliveryOptimization.admx/adml` that is included with the Microsoft Windows 10 RTM (Release 1507) Administrative Templates (or newer).

### ***18.9.17.1 (L1) Ensure 'Download Mode' is NOT set to 'Enabled: Internet' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting specifies the download method that Delivery Optimization can use in downloads of Windows Updates, Apps and App updates. The following methods are supported:

- 0 = HTTP only, no peering.
- 1 = HTTP blended with peering behind the same NAT.
- 2 = HTTP blended with peering across a private group. Peering occurs on devices in the same Active Directory Site (if exist) or the same domain by default. When this option is selected, peering will cross NATs. To create a custom group use Group ID in combination with Mode 2.
- 3 = HTTP blended with Internet Peering.
- 99 = Simple download mode with no peering. Delivery Optimization downloads using HTTP only and does not attempt to contact the Delivery Optimization cloud services.
- 100 = Bypass mode. Do not use Delivery Optimization and use BITS instead.

The recommended state for this setting is any value EXCEPT: `Enabled: Internet (3)`.

**Note:** The default on all SKUs other than Enterprise, Enterprise LTSB or Education is `Enabled: Internet (3)`, so on other SKUs, be sure to set this to a different value.

### **Rationale:**

Due to privacy concerns and security risks, updates should only be downloaded directly from Microsoft, or from a trusted machine on the internal network that received *its* updates from a trusted source and approved by the network administrator.

### **Impact:**

Machines will not be able to download updates from peers on the Internet. If set to Enabled: HTTP only (0), Enabled: Simple (99), or Enabled: Bypass (100), machines will not be able to download updates from other machines on the same LAN.

### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\DeliveryOptimization:DODownloadMode\_ProviderSet

### **To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 3.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\DeliveryOptimization:DODownloadMode

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Internet:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/DeliveryOptimization/
          DODownloadMode
Data type: Integer
Value: 3
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enterprise, Enterprise LTSB and Education SKUs: Enabled: LAN (1)

All other SKUs: Enabled: Internet (3)

## **18.9.18 Desktop Gadgets**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Sidebar.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

## **18.9.19 Desktop Window Manager**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `DWM.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.20 Device and Driver Compatibility**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `DeviceCompat.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

## **18.9.21 Device Registration (formerly Workplace Join)**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WorkplaceJoin.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

**Note:** This section was initially named *Workplace Join* but was renamed by Microsoft to *Device Registration* starting with the Microsoft Windows 10 RTM (Release 1507) Administrative Templates.

## **18.9.22 Digital Locker**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `DigitalLocker.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.23 Edge UI**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `EdgeUI.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

## **18.9.24 EMET**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `EMET.admx/adml` that is included with Microsoft EMET.

EMET is free and supported security software developed by Microsoft that allows an enterprise to apply exploit mitigations to applications that run on Windows. Many of these mitigations were later coded directly into Windows 10 and Server 2016.

**Note:** Although EMET is quite effective at enhancing exploit protection on Windows workstation OSes prior to Windows 10, it is highly recommended that compatibility testing is done on typical workstation configurations (including all CIS-recommended EMET settings) before widespread deployment to your environment.

**Note #2:** EMET has been reported to be very problematic on 32-bit OSes - we only recommend using it with 64-bit OSes.

**Note #3:** Microsoft has announced that EMET will be End-Of-Life (EOL) on July 31, 2018. This does not mean the software will stop working, only that Microsoft will not update it any further past that date, nor troubleshoot new problems with it. They are instead recommending that workstations be upgraded to Windows 10.

## ***18.9.25 Event Forwarding***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `EventForwarding.admx/adml` that is included with the Microsoft Windows Server 2008 (non-R2) Administrative Templates (or newer).

## **18.9.26 Event Log Service**

This section contains recommendations for configuring the Event Log Service.

This Group Policy section is provided by the Group Policy template `EventLog.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.9.26.1 Application**

This section contains recommendations for configuring the Application Event Log.

This Group Policy section is provided by the Group Policy template `EventLog.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

#### *18.9.26.1.1 (L1) Ensure 'Application: Control Event Log behavior when the log file reaches its maximum size' is set to 'Disabled' (Automated)*

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

This policy setting controls Event Log behavior when the log file reaches its maximum size.

The recommended state for this setting is: `Disabled`.

**Note:** Old events may or may not be retained according to the *Backup log automatically when full* policy setting.

##### **Rationale:**

If new events are not recorded it may be difficult or impossible to determine the root cause of system problems or the unauthorized activities of malicious users.

##### **Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\EventLogService:ControlEventLogBehavior\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\EventLogService:ControlEventLogBehavior

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\EventLog\Application:Retention

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Event Log Service/Application
Setting Name:	Control Event Log behavior when the log file reaches its maximum size
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (When a log file reaches its maximum size, new events overwrite old events.)

## **CIS Controls:**

Version 7

### **6.4 Ensure adequate storage for logs**

Ensure that all systems that store logs have adequate storage space for the logs generated.

**18.9.26.1.2 (L1) Ensure 'Application: Specify the maximum log file size (KB)' is set to 'Enabled: 32,768 or greater' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting specifies the maximum size of the log file in kilobytes. The maximum log file size can be configured between 1 megabyte (1,024 kilobytes) and 4 terabytes (4,194,240 kilobytes) in kilobyte increments.

The recommended state for this setting is: Enabled: 32,768 or greater.

**Rationale:**

If events are not recorded it may be difficult or impossible to determine the root cause of system problems or the unauthorized activities of malicious users.

**Impact:**

When event logs fill to capacity, they will stop recording information unless the retention method for each is set so that the computer will overwrite the oldest entries with the most recent ones. To mitigate the risk of loss of recent data, you can configure the retention method so that older events are overwritten as needed.

The consequence of this configuration is that older events will be removed from the logs. Attackers can take advantage of such a configuration, because they can generate a large number of extraneous events to overwrite any evidence of their attack. These risks can be somewhat reduced if you automate the archival and backup of event log data.

Ideally, all specifically monitored events should be sent to a server that uses Microsoft System Center Operations Manager (SCOM) or some other automated monitoring tool. Such a configuration is particularly important because an attacker who successfully compromises a server could clear the Security log. If all events are sent to a monitoring server, then you will be able to gather forensic information about the attacker's activities.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\EventLogService:SpecifyMaximumFileSizeApplicationLog_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="Channel\_LogMaxSize" value="32768" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\EventLogService:SpecifyMaximumFileSizeApplicationLog
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 8000 or 32768.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\EventLog\Application:MaxSize
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: 32,768 or greater:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Event Log Service/Application
Setting Name:	Specify the maximum log file size (KB)
Configuration:	Enabled: 32,768 or greater

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (The default log size is 20,480 KB - this value can be changed by the local administrator using the Log Properties dialog.)

## **CIS Controls:**

Version 7

### **6.4 Ensure adequate storage for logs**

Ensure that all systems that store logs have adequate storage space for the logs generated.

## **18.9.26.2 Security**

This section contains recommendations for configuring the Security Event Log.

This Group Policy section is provided by the Group Policy template `EventLog.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

*18.9.26.2.1 (L1) Ensure 'Security: Specify the maximum log file size (KB)' is set to 'Enabled: 196,608 or greater' (Automated)*

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting specifies the maximum size of the log file in kilobytes. The maximum log file size can be configured between 1 megabyte (1,024 kilobytes) and 4 terabytes (4,194,240 kilobytes) in kilobyte increments.

The recommended state for this setting is: Enabled: 196,608 or greater.

### **Rationale:**

If events are not recorded it may be difficult or impossible to determine the root cause of system problems or the unauthorized activities of malicious users.

### **Impact:**

When event logs fill to capacity, they will stop recording information unless the retention method for each is set so that the computer will overwrite the oldest entries with the most recent ones. To mitigate the risk of loss of recent data, you can configure the retention method so that older events are overwritten as needed.

The consequence of this configuration is that older events will be removed from the logs. Attackers can take advantage of such a configuration, because they can generate a large number of extraneous events to overwrite any evidence of their attack. These risks can be somewhat reduced if you automate the archival and backup of event log data.

Ideally, all specifically monitored events should be sent to a server that uses Microsoft System Center Operations Manager (SCOM) or some other automated monitoring tool. Such a configuration is particularly important because an attacker who successfully compromises a server could clear the Security log. If all events are sent to a monitoring server, then you will be able to gather forensic information about the attacker's activities.

### Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\EventLogService:SpecifyMaximumFileSizeSecurityLog_ProviderSet
```

### To confirm that the policy was properly applied to the system, check one of the following locations:

Navigate to the following registry location and confirm it is set to <enabled/><data id="Channel\_LogMaxSize" value="196608" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\EventLogService:SpecifyMaximumFileSizeSecurityLog
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

OR

Navigate to the following registry location and confirm it is set to 30000 or 196608.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\EventLog\Security:MaxSize
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: 196,608 or greater:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Event Log Service/Security
Setting Name:	Specify the maximum log file size (KB)
Configuration:	Enabled: 196,608 or greater

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (The default log size is 20,480 KB - this value can be changed by the local administrator using the Log Properties dialog.)

## **CIS Controls:**

Version 7

### **6.4 Ensure adequate storage for logs**

Ensure that all systems that store logs have adequate storage space for the logs generated.

### **18.9.26.3 Setup**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `EventLog.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.26.4 System**

This section contains recommendations for configuring the System Event Log.

This Group Policy section is provided by the Group Policy template `EventLog.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

*18.9.26.4.1 (L1) Ensure 'System: Specify the maximum log file size (KB)' is set to 'Enabled: 32,768 or greater' (Automated)*

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting specifies the maximum size of the log file in kilobytes. The maximum log file size can be configured between 1 megabyte (1,024 kilobytes) and 4 terabytes (4,194,240 kilobytes) in kilobyte increments.

The recommended state for this setting is: Enabled: 32,768 or greater.

### **Rationale:**

If events are not recorded it may be difficult or impossible to determine the root cause of system problems or the unauthorized activities of malicious users

### **Impact:**

When event logs fill to capacity, they will stop recording information unless the retention method for each is set so that the computer will overwrite the oldest entries with the most recent ones. To mitigate the risk of loss of recent data, you can configure the retention method so that older events are overwritten as needed.

The consequence of this configuration is that older events will be removed from the logs. Attackers can take advantage of such a configuration, because they can generate a large number of extraneous events to overwrite any evidence of their attack. These risks can be somewhat reduced if you automate the archival and backup of event log data.

Ideally, all specifically monitored events should be sent to a server that uses Microsoft System Center Operations Manager (SCOM) or some other automated monitoring tool. Such a configuration is particularly important because an attacker who successfully compromises a server could clear the Security log. If all events are sent to a monitoring server, then you will be able to gather forensic information about the attacker's activities.

### Audit:

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\EventLogService:SpecifyMaximumFileSizeSystemLog\_ProviderSet

### To confirm that the policy was properly applied to the system, check one of the following locations:

Navigate to the following registry location and confirm it is set to <enabled/><data id="Channel\_LogMaxSize" value="32768" />.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\EventLogService:SpecifyMaximumFileSizeSystemLog

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

OR

Navigate to the following registry location and confirm it is set to 8000 or 32768.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\EventLog\System:MaxSize

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: 32,768 or greater:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Event Log Service/System
Setting Name:	Specify the maximum log file size (KB)
Configuration:	Enabled: 32,768 or greater

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (The default log size is 20,480 KB - this value can be changed by the local administrator using the Log Properties dialog.)

## **CIS Controls:**

Version 7

### **6.4 Ensure adequate storage for logs**

Ensure that all systems that store logs have adequate storage space for the logs generated.

## **18.9.27 Event Logging**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `EventLogging.admx/adml` that is included with the Microsoft Windows 10 RTM (Release 1507) Administrative Templates (or newer).

## **18.9.28 Event Viewer**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `EventViewer.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.29 Family Safety (formerly Parental Controls)**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `ParentalControls.admx/adml` that is only included with the Microsoft Windows Vista through the Windows 10 RTM (Release 1507) Administrative Templates.

**Note:** This section was initially named *Parental Controls* but was renamed by Microsoft to *Family Safety* starting with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates.

## **18.9.30 File Explorer (formerly Windows Explorer)**

This section contains recommendations to control the availability of options such as menu items and tabs in dialog boxes.

This Group Policy section is provided by the Group Policy template `WindowsExplorer.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

**Note:** This section was initially named *Windows Explorer* but was renamed by Microsoft to *File Explorer* starting with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates.

### **18.9.30.1 Previous Versions**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `PreviousVersions.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

#### **18.9.30.2 (L1) Ensure 'Turn off Data Execution Prevention for Explorer' is set to 'Disabled' (Automated)**

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

Disabling Data Execution Prevention can allow certain legacy plug-in applications to function without terminating Explorer.

The recommended state for this setting is: Disabled.

**Note:** Some legacy plug-in applications and other software may not function with Data Execution Prevention and will require an exception to be defined for that specific plug-in/software.

**Rationale:**

Data Execution Prevention is an important security feature supported by Explorer that helps to limit the impact of certain types of malware.

**Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\FileExplorer:TurnOffDataExecutionPreventionForExplorer\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\FileExplorer:TurnOffDataExecutionPreventionForExplorer

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\Explorer:NoDataExecutionPrevention

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/File Explorer
Setting Name:	Turn off Data Execution Prevention for Explorer
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Data Execution Prevention will block certain types of malware from exploiting Explorer.)

## **CIS Controls:**

Version 7

### 8.3 Enable Operating System Anti-Exploitation Features/ Deploy Anti-Exploit Technologies

Enable anti-exploitation features such as Data Execution Prevention (DEP) or Address Space Layout Randomization (ASLR) that are available in an operating system or deploy appropriate toolkits that can be configured to apply protection to a broader set of applications and executables.

**18.9.30.3 (L1) Ensure 'Turn off heap termination on corruption' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

Without heap termination on corruption, legacy plug-in applications may continue to function when a File Explorer session has become corrupt. Ensuring that heap termination on corruption is active will prevent this.

The recommended state for this setting is: Disabled.

**Rationale:**

Allowing an application to function after its session has become corrupt increases the risk posture to the system.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\FileExplorer:TurnOffHeapTerminationOnCorruption_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\FileExplorer:TurnOffHeapTerminationOnCorruption
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\Explorer>NoHeapTerminationOnCorruption
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/File Explorer
Setting Name:	Turn off heap termination on corruption
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Heap termination on corruption is enabled.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

### **18.9.31 File History**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `FileHistory.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

### **18.9.32 Find My Device**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `FindMy.admx/adml` that is included with the Microsoft Windows 10 Release 1703 Administrative Templates (or newer).

### **18.9.33 Game Explorer**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `GameExplorer.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.9.34 Handwriting**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Handwriting.admx/adml` that is included with the Microsoft Windows 10 Release 1709 Administrative Templates (or newer).

### **18.9.35 HomeGroup**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Sharing.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

### **18.9.36 Import Video**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `CaptureWizard.admx/adml` that is only included with the Microsoft Windows Vista and Windows Server 2008 (non-R2) Administrative Templates.

### **18.9.37 Internet Explorer**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `InetRes.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.9.38 Internet Information Services**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `IIS.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.39 Location and Sensors**

This section contains settings for Locations and Sensors.

This Group Policy section is provided by the Group Policy template `sensors.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

### ***18.9.39.1 (L2) Ensure 'Turn off location' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

#### **Description:**

This policy setting turns off the location feature for the computer.

The recommended state for this setting is: `Enabled`.

#### **Rationale:**

This setting affects the location feature (e.g. GPS or other location tracking). From a security perspective, it's not a good idea to reveal your location to software in most cases, but there are legitimate uses, such as mapping software. However, they should not be used in high security environments.

#### **Impact:**

The location feature is turned off, and all programs on the computer are prevented from using location information from the location feature.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\System:AllowLocation\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\System:AllowLocation

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to 'Enabled':

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/System/AllowLocation
Data type:	Integer
Value:	1

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Programs on the computer are permitted to use location information from the location feature.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.9.40 Maintenance Scheduler**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `msched.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

## **18.9.41 Maps**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WinMaps.admx/adml` that is included with the Microsoft Windows 10 Release 1511 Administrative Templates (or newer).

## **18.9.42 MDM**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `MDM.admx/adml` that is included with the Microsoft Windows 10 Release 1607 & Server 2016 Administrative Templates (or newer).

## **18.9.43 Messaging**

This section contains messaging settings.

This Group Policy section is provided by the Group Policy template `Messaging.admx/adml` that is included with the Microsoft Windows 10 Release 1709 Administrative Templates (or newer).

### ***18.9.43.1 (L2) Ensure 'Allow Message Service Cloud Sync' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

#### **Description:**

This policy setting allows backup and restore of cellular text messages to Microsoft's cloud services.

The recommended state for this setting is: Disabled.

#### **Rationale:**

In a high security environment, data should never be sent to any 3rd party since this data could contain sensitive information.

#### **Impact:**

Cellular text messages will not be backed up to (or restored from) Microsoft's cloud services.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Messaging:  
AllowMessageSync\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
Device\Messaging:AllowMessageSync

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Messaging/AllowMessageSync
Data type:	Integer
Value:	0

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (Cellular text messages can be backed up and restored to Microsoft's cloud services.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.9.44 Microsoft account**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `MSAPolicy.admx/adml` that is included with the Microsoft Windows 10 Release 1703 Administrative Templates (or newer).

## **18.9.45 Microsoft Defender Antivirus (formerly Windows Defender and Windows Defender Antivirus)**

This section contains recommendations related to Microsoft Defender Antivirus.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

**Note:** This section was originally named *Windows Defender* but was renamed by Microsoft to *Windows Defender Antivirus* starting with the Microsoft Windows 10 Release 1703 Administrative Templates. It was renamed (again) to *Microsoft Defender Antivirus* starting with the Microsoft Windows 10 Release 2004 Administrative Templates.

### **18.9.45.1 Client Interface**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

### **18.9.45.2 Exclusions**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

### **18.9.45.3 MAPS**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

### **18.9.45.4 Microsoft Defender Exploit Guard (formerly Windows Defender Exploit Guard)**

This section contains Microsoft Defender Exploit Guard settings.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with the Microsoft Windows 10 Release 1709 Administrative Templates (or newer).

**Note:** This section was originally named *Windows Defender Exploit Guard* but was renamed by Microsoft to *Microsoft Defender Exploit Guard* starting with the Microsoft Windows 10 Release 2004 Administrative Templates.

## **18.9.45.4.1 Attack Surface Reduction**

This section contains Attack Surface Reduction settings.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

### ***18.9.45.4.1.1 (L1) Ensure 'Configure Attack Surface Reduction rules' is set to 'Enabled' (Manual)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting controls the state for the Attack Surface Reduction (ASR) rules.

The recommended state for this setting is: Enabled.

#### **Rationale:**

Attack surface reduction helps prevent actions and apps that are typically used by exploit-seeking malware to infect machines.

#### **Impact:**

When a rule is triggered, a notification will be displayed from the Action Center.

#### **Audit:**

Please see recommendation 18.9.45.4.1.2.

#### **Remediation:**

Please see recommendation 18.9.45.4.1.2.

#### **Default Value:**

Disabled. (No ASR rules will be configured.)

**CIS Controls:**

Version 7

**8.3 Enable Operating System Anti-Exploitation Features/ Deploy Anti-Exploit Technologies**

Enable anti-exploitation features such as Data Execution Prevention (DEP) or Address Space Layout Randomization (ASLR) that are available in an operating system or deploy appropriate toolkits that can be configured to apply protection to a broader set of applications and executables.

**18.9.45.4.1.2 (L1) Ensure 'Configure Attack Surface Reduction rules: Set the state for each ASR rule' is 'configured' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting sets the Attack Surface Reduction rules.

The recommended state for this setting is:

26190899-1602-49e8-8b27-eb1d0a1ce869 - 1 (Block Office communication application from creating child processes)

3b576869-a4ec-4529-8536-b80a7769e899 - 1 (Block Office applications from creating executable content)

5beb7efe-fd9a-4556-801d-275e5ffc04cc - 1 (Block execution of potentially obfuscated scripts)

75668c1f-73b5-4cf0-bb93-3ecf5cb7cc84 - 1 (Block Office applications from injecting code into other processes)

7674ba52-37eb-4a4f-a9a1-f0f9a1619a2c - 1 (Block Adobe Reader from creating child processes)

92e97fa1-2edf-4476-bdd6-9dd0b4dddc7b - 1 (Block Win32 API calls from Office macro)  
9e6c4e1f-7d60-472f-ba1a-a39ef669e4b2 - 1 (Block credential stealing from the Windows local security authority subsystem (lsass.exe))

b2b3f03d-6a65-4f7b-a9c7-1c7ef74a9ba4 - 1 (Block untrusted and unsigned processes that run from USB)

be9ba2d9-53ea-4cdc-84e5-9b1eeee46550 - 1 (Block executable content from email client and webmail)

d3e037e1-3eb8-44c8-a917-57927947596d - 1 (Block JavaScript or VBScript from launching downloaded executable content)

d4f940ab-401b-4efc-aadc-ad5f3c50688a - 1 (Block Office applications from creating child processes)

**Note:** More information on ASR rules can be found at the following link: [Use Attack surface reduction rules to prevent malware infection | Microsoft Docs](#)

**Rationale:**

Attack surface reduction helps prevent actions and apps that are typically used by exploit-seeking malware to infect machines.

**Impact:**

When a rule is triggered, a notification will be displayed from the Action Center.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Defender:AttackSurfaceReductionRules_ProviderSet
```

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 75668c1f-73b5-4cf0-bb93-3ecf5cb7cc84=1|3b576869-a4ec-4529-8536-b80a7769e899=1|d4f940ab-401b-4efc-aadc-ad5f3c50688a=1|92e97fa1-2edf-4476-bdd6-9dd0b4dddc7b=1|5beb7efe-fd9a-4556-801d-275e5ffc04cc=1|d3e037e1-3eb8-44c8-a917-57927947596d=1|9e6c4e1f-7d60-472f-ba1a-a39ef669e4b2=1|b2b3f03d-6a65-4f7b-a9c7-1c7ef74a9ba4=1|be9ba2d9-53ea-4cdc-84e5-9b1eeee46550=1|7674ba52-37eb-4a4f-a9a1-f0f9a1619a2c=1|26190899-1602-49e8-8b27-eb1d0a1ce869=1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Defender:AttackSurfaceReductionRules
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to either `Enable` or `Block`:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Endpoint protection/Microsoft Defender Exploit Guard/Attack Surface Reduction
Setting Name:	Flag credential stealing from the Windows local security authority subsystem
Configuration:	Enable
Setting Name:	Process creation from Adobe Reader (beta)
Configuration:	Block
Setting Name:	Office apps injecting into other processes (no exceptions)
Configuration:	Enable
Setting Name:	Office apps/macros creating executable content
Configuration:	Block
Setting Name:	Office apps launching child processes
Configuration:	Block
Setting Name:	Win32 imports from Office macro code
Configuration:	Block
Setting Name:	Process creation from Office communication products (beta)
Configuration:	Enable
Setting Name:	Obfuscated js/vbs/ps.macro code
Configuration:	Block
Setting Name:	js/vbs executing payload downloaded from Internet (no exceptions)
Configuration:	Block
Setting Name:	Untrusted and unsigned processes that run from USB
Configuration:	Block
Setting Name:	Execution of executable content (exe, dll, ps, js, vbs, etc.) dropped from email (webmail/mail client) (no exceptions)
Configuration:	Block

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Default Value:**

Disabled. (No ASR rules will be configured.)

**CIS Controls:**

Version 7

### 8.3 Enable Operating System Anti-Exploitation Features/ Deploy Anti-Exploit Technologies

Enable anti-exploitation features such as Data Execution Prevention (DEP) or Address Space Layout Randomization (ASLR) that are available in an operating system or deploy appropriate toolkits that can be configured to apply protection to a broader set of applications and executables.

#### ***18.9.45.4.2 Controlled Folder Access***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

### **18.9.45.4.3 Network Protection**

This section contains Windows Network Protection settings.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with the Microsoft Windows 10 Release 1709 Administrative Templates (or newer).

#### *18.9.45.4.3.1 (L1) Ensure 'Prevent users and apps from accessing dangerous websites' is set to 'Enabled: Block' (Automated)*

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

This policy setting controls Microsoft Defender Exploit Guard network protection.

The recommended state for this setting is: Enabled: Block.

##### **Rationale:**

This setting can help prevent employees from using any application to access dangerous domains that may host phishing scams, exploit-hosting sites, and other malicious content on the Internet.

##### **Impact:**

Users and applications will not be able to access dangerous domains.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Defender:EnableNetworkProtection_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Defender:EnableNetworkProtection
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows Defender\PolicyManager:EnableNetworkProtection
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to either `Enable`:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Endpoint protection)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Endpoint protection/Microsoft Defender Exploit Guard/Network Filtering
Setting Name:	Network protection
Configuration:	Enable

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users and applications will not be blocked from connecting to dangerous domains.)

## **CIS Controls:**

Version 7

### **7.4 Maintain and Enforce Network-Based URL Filters**

Enforce network-based URL filters that limit a system's ability to connect to websites not approved by the organization. This filtering shall be enforced for each of the organization's systems, whether they are physically at an organization's facilities or not.

#### **7.6 Log all URL requests**

Log all URL requests from each of the organization's systems, whether onsite or a mobile device, in order to identify potentially malicious activity and assist incident handlers with identifying potentially compromised systems.

### ***18.9.45.5 MpEngine***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with the Microsoft Windows 10 Release 1703 Administrative Templates (or newer).

### ***18.9.45.6 Network Inspection System***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

### ***18.9.45.7 Quarantine***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

## **18.9.45.8 Real-time Protection**

This section contains settings related to Real-time Protection.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

### ***18.9.45.8.1 (L1) Ensure 'Turn on behavior monitoring' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting allows you to configure behavior monitoring for Microsoft Defender Antivirus.

The recommended state for this setting is: Enabled.

#### **Rationale:**

When running an antivirus solution such as Microsoft Defender Antivirus, it is important to ensure that it is configured to heuristically monitor in real-time for suspicious and known malicious activity.

#### **Impact:**

None - this is the default configuration.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Defender:AllowBehaviorMonitoring_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Defender:AllowBehaviorMonitoring
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows Defender\PolicyManager:AllowBehaviorMonitoring
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Defender/Allow
          BehaviorMonitoring
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (Behavior monitoring will be enabled.)

## **CIS Controls:**

Version 7

### **8.1 Utilize Centrally Managed Anti-malware Software**

Utilize centrally managed anti-malware software to continuously monitor and defend each of the organization's workstations and servers.

### ***18.9.45.9 Remediation***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

### ***18.9.45.10 Reporting***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

## **18.9.45.11 Scan**

This section contains settings related to Microsoft Defender scanning.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

### ***18.9.45.11.1 (L1) Ensure 'Scan removable drives' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting allows you to manage whether or not to scan for malicious software and unwanted software in the contents of removable drives, such as USB flash drives, when running a full scan.

The recommended state for this setting is: `Enabled`.

#### **Rationale:**

It is important to ensure that any present removable drives are always included in any type of scan, as removable drives are more likely to contain malicious software brought in to the enterprise managed environment from an external, unmanaged computer.

#### **Impact:**

Removable drives will be scanned during any type of scan by Microsoft Defender Antivirus.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Defender:AllowFullScanRemovableDriveScanning_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Defender:AllowFullScanRemovableDriveScanning
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows Defender\PolicyManager:DisableRemovableDriveScanning
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Defender/AllowFull
          ScanRemovableDriveScanning
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Removable drives will not be scanned during a full scan. Removable drives may still be scanned during quick scan and custom scan.)

## **CIS Controls:**

Version 7

### **8.4 Configure Anti-Malware Scanning of Removable Devices**

Configure devices so that they automatically conduct an anti-malware scan of removable media when inserted or connected.

## **18.9.45.11.2 (L1) Ensure 'Turn on e-mail scanning' is set to 'Enabled' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting allows you to configure e-mail scanning. When e-mail scanning is enabled, the engine will parse the mailbox and mail files, according to their specific format, in order to analyze the mail bodies and attachments. Several e-mail formats are currently supported, for example: pst (Outlook), dbx, mbx, mime (Outlook Express), binhex (Mac).

The recommended state for this setting is: Enabled.

### **Rationale:**

Incoming e-mails should be scanned by an antivirus solution such as Microsoft Defender Antivirus, as email attachments are a commonly used attack vector to infiltrate computers with malicious software.

### **Impact:**

E-mail scanning by Microsoft Defender Antivirus will be enabled.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Defender:AllowEmailScanning\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Defender:AllowEmailScanning

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows Defender\Policy Manager:AllowEmailScanning

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Defender/AllowEmailScanning
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (E-mail scanning by Microsoft Defender Antivirus will be disabled.)

## **CIS Controls:**

Version 7

### **8.1 Utilize Centrally Managed Anti-malware Software**

Utilize centrally managed anti-malware software to continuously monitor and defend each of the organization's workstations and servers.

### **8.2 Ensure Anti-Malware Software and Signatures are Updated**

Ensure that the organization's anti-malware software updates its scanning engine and signature database on a regular basis.

## **18.9.45.12 Security Intelligence Updates (formerly Signature Updates)**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

**Note:** This section was initially named *Signature Updates* but was renamed by Microsoft to *Security Intelligence Updates* starting with the Microsoft Windows 10 Release 1903 Administrative Templates.

## **18.9.45.13 Threats**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsDefender.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

**18.9.45.14 (L1) Ensure 'Configure detection for potentially unwanted applications' is set to 'Enabled: Block' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting controls detection and action for Potentially Unwanted Applications (PUA), which are sneaky unwanted application bundlers or their bundled applications, that can deliver adware or malware.

The recommended state for this setting is: Enabled: Block.

For more information, see this link: [Block potentially unwanted applications with Microsoft Defender Antivirus | Microsoft Docs](#)

**Rationale:**

Potentially unwanted applications can increase the risk of your network being infected with malware, cause malware infections to be harder to identify, and can waste IT resources in cleaning up the applications. They should be blocked from installation.

**Impact:**

Applications that are identified by Microsoft as PUA will be blocked at download and install time.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Defender:PUAProtection\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Defender:PUAProtection

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows Defender\Policy Manager:PUAProtection

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Block:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Defender/PUA Protection
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Applications that are identified by Microsoft as PUA will not be blocked.)

## **CIS Controls:**

Version 7

### **2.7 Utilize Application Whitelisting**

Utilize application whitelisting technology on all assets to ensure that only authorized software executes and all unauthorized software is blocked from executing on assets.

#### **8.1 Utilize Centrally Managed Anti-malware Software**

Utilize centrally managed anti-malware software to continuously monitor and defend each of the organization's workstations and servers.

**18.9.45.15 (L1) Ensure 'Turn off Microsoft Defender AntiVirus' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting turns off Microsoft Defender Antivirus. If the setting is configured to Disabled, Microsoft Defender Antivirus runs and computers are scanned for malware and other potentially unwanted software.

The recommended state for this setting is: Disabled.

**Rationale:**

It is important to ensure a current, updated antivirus product is scanning each computer for malicious file activity. Microsoft provides a competent solution out of the box in Microsoft Defender Antivirus.

Organizations that choose to purchase a reputable 3rd-party antivirus solution may choose to exempt themselves from this recommendation in lieu of the commercial alternative.

**Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Defender:AllowRealtimeMonitoring_ProviderSet
```

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Defender:AllowRealtimeMonitoring
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Defender/Allow
          RealtimeMonitoring
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Microsoft Defender Antivirus runs and computers are scanned for malware and other potentially unwanted software.)

## **CIS Controls:**

Version 7

### **8.1 Utilize Centrally Managed Anti-malware Software**

Utilize centrally managed anti-malware software to continuously monitor and defend each of the organization's workstations and servers.

## **18.9.46 Microsoft Defender Application Guard (formerly Windows Defender Application Guard)**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `AppHVSI.admx/adml` that is included with the Microsoft Windows 10 Release 1703 Administrative Templates (or newer).

**Note:** This section was originally named *Windows Defender Application Guard* but was renamed by Microsoft to *Microsoft Defender Application Guard* starting with the Microsoft Windows 10 Release 2004 Administrative Templates.

## **18.9.47 Microsoft Defender Exploit Guard (formerly Windows Defender Exploit Guard)**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `ExploitGuard.admx/adml` that is included with the Microsoft Windows 10 Release 1709 Administrative Templates (or newer).

**Note:** This section was originally named *Windows Defender Exploit Guard*, but was renamed by Microsoft to *Microsoft Defender Exploit Guard* starting with the Microsoft Windows 10 Release 2004 Administrative Templates.

## **18.9.48 Microsoft Edge**

This section contains recommendations related to the Microsoft Edge web browser, which is available in Windows 10.

This Group Policy section is provided by the Group Policy template MicrosoftEdge.admx/adml that is included with the Microsoft Windows 10 RTM (Release 1507) Administrative Templates (or newer).

### ***18.9.48.1 (L1) Ensure 'Prevent bypassing Windows Defender SmartScreen prompts for files' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This setting lets you decide whether employees can override the SmartScreen Filter warnings about downloading unverified files.

The recommended state for this setting is: Enabled.

#### **Rationale:**

SmartScreen will warn an employee if a file is potentially malicious. Enabling this setting prevents these warnings from being bypassed.

#### **Impact:**

Employees will not be able to ignore SmartScreen Filter warnings on files, and they will be blocked from downloading unverified files (that are potentially malicious) that SmartScreen detects.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Browser:PreventSmartScreenPromptOverrideForFiles\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Browser:PreventSmartScreenPromptOverrideForFiles

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Browser/Prevent
          SmartScreenPromptOverrideForFiles
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Employees will be able to ignore SmartScreen Filter warnings about unverified files and continue the download process.)

## **CIS Controls:**

Version 7

### **7.9 Block Unnecessary File Types**

Block all e-mail attachments entering the organization's e-mail gateway if the file types are unnecessary for the organization's business.

## **18.9.49 Microsoft FIDO Authentication**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `FidoAuth.admx/adml` that is included with the Microsoft Windows 10 Release 1709 Administrative Templates (or newer).

## **18.9.50 Microsoft Secondary Authentication Factor**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `DeviceCredential.admx/adml` that is included with the Microsoft Windows 10 Release 1607 & Server 2016 Administrative Templates (or newer).

## **18.9.51 Microsoft User Experience Virtualization**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `UserExperienceVirtualization.admx/adml` that is included with the Microsoft Windows 10 Release 1607 & Server 2016 Administrative Templates (or newer).

## **18.9.52 NetMeeting**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Conf.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.53 Network Access Protection**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `NAPXPQec.admx/adml` that is only included with the Microsoft Windows Server 2008 (non-R2) through the Windows 8.1 Update & Server 2012 R2 Update Administrative Templates.

## **18.9.54 Network Projector**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `NetworkProjection.admx/adml` that is only included with the Microsoft Windows Vista through the Windows 8.1 Update & Server 2012 R2 Update Administrative Templates.

## **18.9.55 OneDrive (formerly SkyDrive)**

This section contains recommendations related to OneDrive.

The Group Policy settings contained within this section are provided by the Group Policy template `SkyDrive.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

**Note:** This section was initially named *SkyDrive* but was renamed by Microsoft to *OneDrive* starting with the Microsoft Windows 10 RTM (Release 1507) Administrative Templates.

### ***18.9.55.1 (L1) Ensure 'Prevent the usage of OneDrive for file storage' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting lets you prevent apps and features from working with files on OneDrive using the Next Generation Sync Client.

The recommended state for this setting is: Enabled.

#### **Rationale:**

Enabling this setting prevents users from accidentally (or intentionally) uploading confidential or sensitive corporate information to the OneDrive cloud service using the Next Generation Sync Client.

**Note:** This security concern applies to *any* cloud-based file storage application installed on a workstation, not just the one supplied with Windows.

### **Impact:**

Users can't access OneDrive from the OneDrive app and file picker. Windows Store apps can't access OneDrive using the WinRT API. OneDrive doesn't appear in the navigation pane in File Explorer. OneDrive files aren't kept in sync with the cloud. Users can't automatically upload photos and videos from the camera roll folder.

**Note:** If your organization uses Office 365, be aware that this setting will prevent users from saving files to OneDrive/SkyDrive.

**Note #2:** If your organization has decided to implement **OneDrive for Business** and therefore needs to except itself from this recommendation, we highly suggest that you also obtain and utilize the `OneDrive.admx/adml` template that is bundled with the latest OneDrive client, as noted [at this link](#) (this template is not included with the Windows Administrative Templates). Two alternative OneDrive settings in particular from that template are worth your consideration:

- *Allow syncing OneDrive accounts for only specific organizations* - a computer-based setting that restricts OneDrive client connections to only **approved** tenant IDs.
- *Prevent users from synchronizing personal OneDrive accounts* - a user-based setting that prevents use of consumer OneDrive (i.e. non-business).

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\System:DisableOneDriveFileSync\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\System:DisableOneDriveFileSync

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\OneDrive:DisableFileSyncNGSC

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/System/DisableOneDriveFileSync
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Apps and features can work with OneDrive file storage using the Next Generation Sync Client.)

## **CIS Controls:**

Version 7

### **13.4 Only Allow Access to Authorized Cloud Storage or Email Providers**

Only allow access to authorized cloud storage or email providers.

## **18.9.56 Online Assistance**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `HelpAndSupport.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.57 OOBE**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `OOBE.admx/adml` that is included with the Microsoft Windows 10 Release 1809 and Server 2019 Administrative Templates (or newer).

## **18.9.58 Password Synchronization**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `PswdSync.admx/adml` that is only included with the Microsoft Windows Vista through the Windows 8.1 Update & Server 2012 R2 Update Administrative Templates.

## **18.9.59 Portable Operating System**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `ExternalBoot.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

## ***18.9.60 Presentation Settings***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `MobilePCPresentationSettings.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.61 Push To Install**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `PushToInstall.admx/adml` that is included with the Microsoft Windows 10 Release 1709 Administrative Templates (or newer).

## **18.9.62 Remote Desktop Services (formerly Terminal Services)**

This section contains recommendations related to Remote Desktop Services.

This Group Policy section is provided by the Group Policy template `TerminalServer.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

**Note:** This section was initially named *Terminal Services* but was renamed by Microsoft to *Remote Desktop Services* starting with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates.

### **18.9.62.1 RD Licensing (formerly TS Licensing)**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `TerminalServer.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

**Note:** This section was initially named *TS Licensing* but was renamed by Microsoft to *RD Licensing* starting with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates.

## **18.9.62.2 Remote Desktop Connection Client**

This section contains recommendations for the Remote Desktop Connection Client.

This Group Policy section is provided by the Group Policy template `TerminalServer.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.9.62.2.1 RemoteFX USB Device Redirection**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `TerminalServer.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

**18.9.62.2.2 (L1) Ensure 'Do not allow passwords to be saved' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting helps prevent Remote Desktop clients from saving passwords on a computer.

The recommended state for this setting is: Enabled.

**Note:** If this policy setting was previously configured as Disabled or Not configured, any previously saved passwords will be deleted the first time a Remote Desktop client disconnects from any server.

**Rationale:**

An attacker with physical access to the computer may be able to break the protection guarding saved passwords. An attacker who compromises a user's account and connects to their computer could use saved passwords to gain access to additional hosts.

**Impact:**

The password saving checkbox will be disabled for Remote Desktop clients and users will not be able to save passwords.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteDesktopServices:DoNotAllowPasswordSaving\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\RemoteDesktopServices:DoNotAllowPasswordSaving

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows NT\Terminal Services:DisablePasswordSaving

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Remote Desktop Services/Remote Desktop Connection Client
Setting Name:	Do not allow passwords to be saved
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users will be able to save passwords using Remote Desktop Connection.)

## **CIS Controls:**

Version 7

### **16.11 Lock Workstation Sessions After Inactivity**

Automatically lock workstation sessions after a standard period of inactivity.

## **18.9.62.3 Remote Desktop Session Host (formerly Terminal Server)**

This section contains recommendations for the Remote Desktop Session Host.

This Group Policy section is provided by the Group Policy template `TerminalServer.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

**Note:** This section was initially named *Terminal Server* but was renamed by Microsoft to *Remote Desktop Session Host* starting with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates.

### **18.9.62.3.1 Application Compatibility**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `TerminalServer-Server.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

## **18.9.62.3.2 Connections**

This section contains recommendations for Connections to the Remote Desktop Session Host.

This Group Policy section is provided by the Group Policy template `TerminalServer.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.9.62.3.2.1 (L2) Ensure 'Allow users to connect remotely by using Remote Desktop Services' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

#### **Description:**

This policy setting allows you to configure remote access to computers by using Remote Desktop Services.

The recommended state for this setting is: `Disabled`.

#### **Rationale:**

Any account with the *Allow log on through Remote Desktop Services* user right can log on to the remote console of the computer. If you do not restrict access to legitimate users who need to log on to the console of the computer, unauthorized users could download and execute malicious code to elevate their privileges.

#### **Impact:**

None - this is the default configuration, unless Remote Desktop Services has been manually enabled on the Remote tab in the System Properties sheet.

## **Audit:**

Navigate to the following registry location and confirm it is set to 2. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteDesktopServices:AllowUsersToConnectRemotely\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\RemoteDesktopServices:AllowUsersToConnectRemotely

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows NT\Terminal Services:fDenyTSConnections

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Remote Desktop Services/Remote Desktop Session Host/Connections
Setting Name:	Allow users to connect remotely by using Remote Desktop Services
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users cannot connect remotely to the target computer by using Remote Desktop Services, unless it has been manually enabled from the Remote tab in the System Properties sheet.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

### ***18.9.62.3.3 Device and Resource Redirection***

This section contains recommendations related to Remote Desktop Session Host Device and Resource Redirection.

This Group Policy section is provided by the Group Policy template TerminalServer.admx/adml that is included with all versions of the Microsoft Windows Administrative Templates.

**18.9.62.3.3.1 (L1) Ensure 'Do not allow drive redirection' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting prevents users from sharing the local drives on their client computers to Remote Desktop Servers that they access. Mapped drives appear in the session folder tree in Windows Explorer in the following format:

\\\TSClient\\<driveletter>\$

If local drives are shared they are left vulnerable to intruders who want to exploit the data that is stored on them.

The recommended state for this setting is: Enabled.

**Rationale:**

Data could be forwarded from the user's Remote Desktop Services session to the user's local computer without any direct user interaction. Malicious software already present on a compromised server would have direct and stealthy disk access to the user's local computer during the Remote Desktop session.

**Impact:**

Drive redirection will not be possible. In most situations, traditional network drive mapping to file shares (including administrative shares) performed manually by the connected user will serve as a capable substitute to still allow file transfers when needed.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteDesktopServices:DoNotAllowDriveRedirection_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\RemoteDesktopServices:DoNotAllowDriveRedirection
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows NT\Terminal Services:fDisableCdm
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Remote Desktop Services/Remote Desktop Session Host/Device and Resource Redirection
Setting Name:	Do not allow drive redirection
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (An RD Session Host maps client drives automatically upon connection.)

## **CIS Controls:**

Version 7

### **14.6 Protect Information through Access Control Lists**

Protect all information stored on systems with file system, network share, claims, application, or database specific access control lists. These controls will enforce the principle that only authorized individuals should have access to the information based on their need to access the information as a part of their responsibilities.

#### **18.9.62.3.4 Licensing**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `TerminalServer.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

#### **18.9.62.3.5 Printer Redirection**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `TerminalServer.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

#### **18.9.62.3.6 Profiles**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `TerminalServer.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.9.62.3.7 RD Connection Broker (formerly TS Connection Broker)**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `TerminalServer.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

**Note:** This section was initially named *TS Connection Broker* but was renamed by Microsoft to *RD Connection Broker* starting with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates.

### **18.9.62.3.8 Remote Session Environment**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `TerminalServer.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.62.3.9 Security**

This section contains recommendations related to Remote Desktop Session Host Security.

This Group Policy section is provided by the Group Policy template TerminalServer.admx/adml that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.9.62.3.9.1 (L1) Ensure 'Always prompt for password upon connection' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting specifies whether Remote Desktop Services always prompts the client computer for a password upon connection. You can use this policy setting to enforce a password prompt for users who log on to Remote Desktop Services, even if they already provided the password in the Remote Desktop Connection client.

The recommended state for this setting is: Enabled.

#### **Rationale:**

Users have the option to store both their username and password when they create a new Remote Desktop Connection shortcut. If the server that runs Remote Desktop Services allows users who have used this feature to log on to the server but not enter their password, then it is possible that an attacker who has gained physical access to the user's computer could connect to a Remote Desktop Server through the Remote Desktop Connection shortcut, even though they may not know the user's password.

#### **Impact:**

Users cannot automatically log on to Remote Desktop Services by supplying their passwords in the Remote Desktop Connection client. They will be prompted for a password to log on.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteDesktopServices:PromptForPasswordUponConnection_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\RemoteDesktopServices:PromptForPasswordUponConnection
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows NT\Terminal Services:fPromptForPassword
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Remote Desktop Services/Remote Desktop Session Host/Security
Setting Name:	Always prompt for password upon connection
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Remote Desktop Services allows users to automatically log on if they enter a password in the Remote Desktop Connection client.)

## **CIS Controls:**

Version 7

### **16.4 Encrypt or Hash all Authentication Credentials**

Encrypt or hash with a salt all authentication credentials when stored.

### **16.5 Encrypt Transmittal of Username and Authentication Credentials**

Ensure that all account usernames and authentication credentials are transmitted across networks using encrypted channels.

**18.9.62.3.9.2 (L1) Ensure 'Require secure RPC communication' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting allows you to specify whether Remote Desktop Services requires secure Remote Procedure Call (RPC) communication with all clients or allows unsecured communication.

You can use this policy setting to strengthen the security of RPC communication with clients by allowing only authenticated and encrypted requests.

The recommended state for this setting is: Enabled.

**Rationale:**

Allowing unsecure RPC communication can expose the server to man in the middle attacks and data disclosure attacks.

**Impact:**

Remote Desktop Services accepts requests from RPC clients that support secure requests, and does not allow unsecured communication with untrusted clients.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteDesktopServices:RequireSecureRPCCommunication_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\RemoteDesktopServices:RequireSecureRPCCommunication
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows NT\Terminal Services:fEncryptRPCTraffic
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Remote Desktop Services/Remote Desktop Session Host/Security
Setting Name:	Require secure RPC communication
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Remote Desktop Services always requests security for all RPC traffic. However, unsecured communication is allowed for RPC clients that do not respond to the request.)

## **CIS Controls:**

Version 7

### **4.5 Use Multifactor Authentication For All Administrative Access**

Use multi-factor authentication and encrypted channels for all administrative account access.

**18.9.62.3.9.3 (L1) Ensure 'Set client connection encryption level' is set to 'Enabled: High Level' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting specifies whether to require the use of a specific encryption level to secure communications between client computers and RD Session Host servers during Remote Desktop Protocol (RDP) connections. This policy only applies when you are using native RDP encryption. However, native RDP encryption (as opposed to SSL encryption) is not recommended. This policy does not apply to SSL encryption.

The recommended state for this setting is: Enabled: High Level.

**Rationale:**

If Remote Desktop client connections that use low level encryption are allowed, it is more likely that an attacker will be able to decrypt any captured Remote Desktop Services network traffic.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteDesktopServices:ClientConnectionEncryptionLevel_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/><data id="TS\_ENCRYPTION\_LEVEL" value="3" />.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\RemoteDesktopServices:ClientConnectionEncryptionLevel
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 3.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows NT\Terminal Services:MinEncryptionLevel
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: High Level:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Remote Desktop Services/Remote Desktop Session Host/Security
Setting Name:	Set client connection encryption level
Configuration:	Enabled: High Level

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled: High Level. (All communications between clients and RD Session Host servers during remote connections using native RDP encryption must be 128-bit strength. Clients that do not support 128-bit encryption will be unable to establish Remote Desktop Server sessions.)

## **CIS Controls:**

Version 7

### **4.5 Use Multifactor Authentication For All Administrative Access**

Use multi-factor authentication and encrypted channels for all administrative account access.

### **18.9.62.3.10 Session Time Limits**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template TerminalServer.admx/adml that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.9.62.3.11 Temporary folders**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template TerminalServer.admx/adml that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.63 RSS Feeds**

This section contains recommendations related to RSS feeds.

This Group Policy section is provided by the Group Policy template `InetRes.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.9.63.1 (L1) Ensure 'Prevent downloading of enclosures' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting prevents the user from having enclosures (file attachments) downloaded from an RSS feed to the user's computer.

The recommended state for this setting is: `Enabled`.

#### **Rationale:**

Allowing attachments to be downloaded through the RSS feed can introduce files that could have malicious intent.

#### **Impact:**

Users cannot set the Feed Sync Engine to download an enclosure through the Feed property page. Developers cannot change the download setting through feed APIs.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\InternetExplorer:DisableEnclosureDownloading\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\InternetExplorer:DisableEnclosureDownloading

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\InternetExplorer\Feeds:DisableEnclosureDownload

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/RSS Feeds
Setting Name:	Prevent downloading of enclosures
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users can set the Feed Sync Engine to download an enclosure through the Feed property page. Developers can change the download setting through the Feed APIs.)

## **CIS Controls:**

Version 7

### **7.2 Disable Unnecessary or Unauthorized Browser or Email Client Plugins**

Uninstall or disable any unauthorized browser or email client plugins or add-on applications.

## **18.9.64 Search**

This section contains recommendations for Search settings.

This Group Policy section is provided by the Group Policy template `Search.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.9.64.1 OCR**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `SearchOCR.admx/adml` that is only included with the Microsoft Windows 7 & Server 2008 R2 through the Windows 10 Release 1511 Administrative Templates.

## **18.9.64.2 (L2) Ensure 'Allow Cloud Search' is set to 'Enabled: Disable Cloud Search' (Automated)**

### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

### **Description:**

This policy setting allows search and Cortana to search cloud sources like OneDrive and SharePoint.

The recommended state for this setting is: Enabled: Disable Cloud Search.

### **Rationale:**

Due to privacy concerns, data should never be sent to any 3rd party since this data could contain sensitive information.

### **Impact:**

Search and Cortana will not be permitted to search cloud sources like OneDrive and SharePoint.

### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Search:AllowCloudSearch\_ProviderSet

### **To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\Search:AllowCloudSearch

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Disable Cloud Search:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Search/AllowCloudSearch
Data type:	Integer
Value:	0

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled: Enable Cloud Search. (Allow search and Cortana to search cloud sources like OneDrive and SharePoint.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

### **18.9.64.3 (L1) Ensure 'Allow Cortana' is set to 'Disabled' (Automated)**

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting specifies whether Cortana is allowed on the device.

The recommended state for this setting is: Disabled.

#### **Rationale:**

If Cortana is enabled, sensitive information could be contained in search history and sent out to Microsoft.

#### **Impact:**

Cortana will be turned off. Users will still be able to use search to find things on the device and on the Internet.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Experience :AllowCortana\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Experience:AllowCortana

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Experience/AllowCortana
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (Cortana will be allowed on the device.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.9.64.4 (L1) Ensure 'Allow Cortana above lock screen' is set to 'Blocked' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting determines whether or not the user can interact with Cortana using speech while the system is locked.

The recommended state for this setting is: Blocked.

### **Rationale:**

Access to any computer resource should not be allowed when the device is locked.

### **Impact:**

The system will need to be unlocked for the user to interact with Cortana using speech.

### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

**HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\AboveLock:  
AllowCortanaAboveLock\_ProviderSet**

### **To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

**HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
AboveLock:AllowCortanaAboveLock**

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Blocked:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Device restrictions)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Device Restrictions/Locked Screen Experience
Setting Name:	Cortana on locked screen (Desktop only)
Configuration:	Block

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (The user can interact with Cortana using speech while the system is locked.)

## **CIS Controls:**

Version 7

### **16.11 Lock Workstation Sessions After Inactivity**

Automatically lock workstation sessions after a standard period of inactivity.

**18.9.64.5 (L1) Ensure 'Allow indexing of encrypted files' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting controls whether encrypted items are allowed to be indexed. When this setting is changed, the index is rebuilt completely. Full volume encryption (such as BitLocker Drive Encryption or a non-Microsoft solution) must be used for the location of the index to maintain security for encrypted files.

The recommended state for this setting is: Disabled.

**Rationale:**

Indexing and allowing users to search encrypted files could potentially reveal confidential data stored within the encrypted files.

**Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Search:AllowIndexingEncryptedStoresOrItems\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Search:AllowIndexingEncryptedStoresOrItems

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Search/AllowIndexing
          EncryptedStoresOrItems
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Search service components (including non-Microsoft components) are expected not to index encrypted items or encrypted stores.)

## **CIS Controls:**

Version 7

### **16.11 Lock Workstation Sessions After Inactivity**

Automatically lock workstation sessions after a standard period of inactivity.

**18.9.64.6 (L1) Ensure 'Allow search and Cortana to use location' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting specifies whether search and Cortana can provide location aware search and Cortana results.

The recommended state for this setting is: Disabled.

**Rationale:**

In an enterprise managed environment, allowing Cortana and Search to have access to location data is unnecessary. Organizations likely do not want this information shared out.

**Impact:**

Search and Cortana will not have access to location information.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Search:AllowSearchToUseLocation\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Search:AllowSearchToUseLocation

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Search/Allow
          SearchToUseLocation
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (Search and Cortana can access location information.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.9.65 Security Center**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `SecurityCenter.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.66 Server for NIS**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `snis.admx/adml` that is only included with the Microsoft Windows Vista through the Windows 8.1 Update & Server 2012 R2 Update Administrative Templates.

## **18.9.67 Shutdown Options**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WinInit.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.68 Smart Card**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `SmartCard.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.69 Software Protection Platform**

This section contains recommendations related to the Software Protection Platform.

This Group Policy section is provided by the Group Policy template `AVSValidationGP.admx/adml` that is included with the Microsoft Windows 10 RTM (Release 1507) Administrative Templates (or newer).

### ***18.9.69.1 (L2) Ensure 'Turn off KMS Client Online AVS Validation' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

#### **Description:**

The Key Management Service (KMS) is a Microsoft license activation method that entails setting up a local server to store the software licenses. The KMS server itself needs to connect to Microsoft to activate the KMS service, but subsequent on-network clients can activate Microsoft Windows OS and/or their Microsoft Office via the KMS server instead of connecting directly to Microsoft. This policy setting lets you opt-out of sending KMS client activation data to Microsoft automatically.

The recommended state for this setting is: `Enabled`.

#### **Rationale:**

Even though the KMS licensing method does not *require* KMS clients to connect to Microsoft, they still send KMS client activation state data to Microsoft automatically. Preventing this information from being sent can help reduce privacy concerns in high security environments.

#### **Impact:**

The computer is prevented from sending data to Microsoft regarding its KMS client activation state.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Licensing:  
DisallowKMSClientOnlineAVSValidation\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
Device\Licensing:DisallowKMSClientOnlineAVSValidation

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/Licensing/Disallow KMSClientOnlineAVSValidation
Data type:	Integer
Value:	1

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (KMS client activation data will automatically be sent to Microsoft when the device activates.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## ***18.9.70 Sound Recorder***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `SoundRec.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## ***18.9.71 Speech***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Speech.admx/adml` that is included with the Microsoft Windows 10 Release 1703 Administrative Templates (or newer).

## **18.9.72 Store**

This section contains recommendations related to the Microsoft Store.

This Group Policy section is provided by the Group Policy template `WinStoreUI.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates, or by the Group Policy template `WindowsStore.admx/adml` that is included with the Microsoft Windows 10 Release 1511 Administrative Templates (or newer).

### ***18.9.72.1 (L2) Ensure 'Disable all apps from Microsoft Store' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

#### **Description:**

This setting configures the launch of all apps from the Microsoft Store that came pre-installed or were downloaded.

The recommended state for this setting is: `Disabled`.

**Note:** This policy setting only applies to Windows 10 Enterprise and Windows 10 Education editions.

**Note #2:** The name of this setting and the Enabled/Disabled values are incorrectly worded – logically, the title implies that configuring it to `Enabled` will disable all apps from the Microsoft Store, and configuring it to `Disabled` will enable all apps from the Microsoft Store. The opposite is true (and is consistent with the GPME help text). This is a logical wording mistake by Microsoft in the Administrative Template.

#### **Rationale:**

The Store service is a retail outlet built into Windows, primarily for consumer use. In an enterprise managed environment the IT department should be managing the installation of all applications to reduce the risk of the installation of vulnerable software.

#### **Impact:**

All apps from the Microsoft Store that came pre-installed or were downloaded are prevented from launching. Existing Microsoft Store apps will not be updated. Microsoft Store is disabled.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\ApplicationManagement:DisableStoreOriginatedApps\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\ApplicationManagement:DisableStoreOriginatedApps

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to 'Disabled':

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name :	<Enter name>
Description :	<Enter Description>
OMA-URI :	./Device/Vendor/MSFT/Policy/Config/ApplicationManagement/DisableStoreOriginatedApps
Data type:	Integer
Value:	1

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (Microsoft Store apps are permitted to be launched and updated. Microsoft Store is enabled.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

**18.9.72.2 (L1) Ensure 'Only display the private store within the Microsoft Store' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting denies access to the retail catalog in the Microsoft Store, but displays the private store.

The recommended state for this setting is: Enabled.

**Rationale:**

Allowing the private store will allow an organization to control the apps that users have access to add to a system. This will help ensure that unapproved malicious apps are not running on a system.

**Impact:**

Users will not be able to view the retail catalog in the Microsoft Store, but they will be able to view apps in the private store.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\ApplicationManagement:RequirePrivateStoreOnly\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\ApplicationManagement:RequirePrivateStoreOnly

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/ApplicationManagement/Require
          PrivateStoreOnly
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users can access the retail catalog in the Microsoft Store.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

***18.9.72.3 (L1) Ensure 'Turn off Automatic Download and Install of updates' is set to 'Disabled' (Automated)***

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This setting enables or disables the automatic download and installation of Microsoft Store app updates.

The recommended state for this setting is: Disabled.

**Rationale:**

Keeping your system properly patched can help protect against 0 day vulnerabilities.

**Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\ApplicationManagement:AllowAppStoreAutoUpdate\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\ApplicationManagement:AllowAppStoreAutoUpdate

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/ApplicationManagement/Allow
          AppStoreAutoUpdate
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Microsoft Store automatically downloads and installs updates for Microsoft Store apps.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.9.73 Sync your settings**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `SettingSync.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

## **18.9.74 Tablet PC**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.75 Task Scheduler**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `TaskScheduler.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.76 Text Input**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `TextInput.admx/adml` that is only included with the Microsoft Windows 10 RTM (Release 1507) Administrative Templates and Microsoft Windows 10 Release 1511 Administrative Templates.

## **18.9.77 Windows Calendar**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WinCal.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## ***18.9.78 Windows Color System***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsColorSystem.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## ***18.9.79 Windows Customer Experience Improvement Program***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `CEIPEnable.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.80 Windows Defender SmartScreen**

This section contains Windows Defender SmartScreen settings.

This Group Policy section is provided by the Group Policy template `SmartScreen.admx/adml` that is included with the Microsoft Windows 10 Release 1703 Administrative Templates (or newer).

### **18.9.80.1 Explorer**

This section contains recommendations for Explorer-related Windows Defender SmartScreen settings.

The Group Policy settings contained within this section are provided by the Group Policy template `WindowsExplorer.admx/adml` that is included with the Microsoft Windows 10 Release 1703 Administrative Templates (or newer).

#### ***18.9.80.1.1 (L1) Ensure 'Configure Windows Defender SmartScreen' is set to 'Enabled: Warn and prevent bypass' (Automated)***

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

This policy setting allows you to manage the behavior of Windows Defender SmartScreen. Windows Defender SmartScreen helps keep PCs safer by warning users before running unrecognized programs downloaded from the Internet. Some information is sent to Microsoft about files and programs run on PCs with this feature enabled.

The recommended state for this setting is: Enabled: Warn and prevent bypass.

##### **Rationale:**

Windows Defender SmartScreen helps keep PCs safer by warning users before running unrecognized programs downloaded from the Internet. However, due to the fact that some information is sent to Microsoft about files and programs run on PCs some organizations may prefer to disable it.

**Impact:**

Users will be warned before they are allowed to run unrecognized programs downloaded from the Internet.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\SmartScreen:EnableSmartScreenInShell\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\SmartScreen:EnableSmartScreenInShell

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Warn and prevent bypass

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/SmartScreen/Enable
          SmartScreenInShell
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Windows Defender SmartScreen behavior is managed by administrators on the PC by using Windows Defender SmartScreen Settings in Action Center.)

## **CIS Controls:**

Version 7

### 8.3 Enable Operating System Anti-Exploitation Features/ Deploy Anti-Exploit Technologies

Enable anti-exploitation features such as Data Execution Prevention (DEP) or Address Space Layout Randomization (ASLR) that are available in an operating system or deploy appropriate toolkits that can be configured to apply protection to a broader set of applications and executables.

## **18.9.80.2 Microsoft Edge**

This section contains recommendations for Microsoft Edge-related Windows Defender SmartScreen settings.

The Group Policy settings contained within this section are provided by the Group Policy template `SmartScreen.admx/adml` that is included with the Microsoft Windows 10 Release 1703 Administrative Templates (or newer).

### *18.9.80.2.1 (L1) Ensure 'Configure Windows Defender SmartScreen' is set to 'Enabled' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This setting lets you decide whether to turn on SmartScreen Filter. SmartScreen Filter provides warning messages to help protect your employees from potential phishing scams and malicious software.

The recommended state for this setting is: Enabled.

#### **Rationale:**

SmartScreen serves an important purpose as it helps to warn users of possible malicious sites and files. Allowing users to turn off this setting can make the browser become more vulnerable to compromise.

#### **Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Browser:AllowSmartScreen\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Browser:AllowSmartScreen

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to 'Enabled':

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Browser/AllowSmartScreen
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (SmartScreen Filter is turned on.)

## **CIS Controls:**

Version 7

### **8.1 Utilize Centrally Managed Anti-malware Software**

Utilize centrally managed anti-malware software to continuously monitor and defend each of the organization's workstations and servers.

**18.9.80.2.2 (L1) Ensure 'Prevent bypassing Windows Defender SmartScreen prompts for sites' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This setting lets you decide whether employees can override the SmartScreen Filter warnings about potentially malicious websites.

The recommended state for this setting is: Enabled.

**Rationale:**

SmartScreen will warn an employee if a website is potentially malicious. Enabling this setting prevents these warnings from being bypassed.

**Impact:**

Employees will not be able to ignore SmartScreen Filter warnings, and they will be blocked from going to potentially malicious websites that SmartScreen detects.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Browser:PreventSmartScreenPromptOverride_ProviderSet
```

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Browser:PreventSmartScreenPromptOverride
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Browser/Prevent
          SmartScreenPromptOverride
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Employees will be able to ignore SmartScreen Filter warnings about potentially malicious websites and continue to the site.)

## **CIS Controls:**

Version 7

### **8.1 Utilize Centrally Managed Anti-malware Software**

Utilize centrally managed anti-malware software to continuously monitor and defend each of the organization's workstations and servers.

## ***18.9.81 Windows Error Reporting***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `ErrorReporting.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.82 Windows Game Recording and Broadcasting**

This section contains settings for Windows Game Recording and Broadcasting.

This Group Policy section is provided by the Group Policy template `GameDVR.admx/adml` that is included with the Microsoft Windows 10 RTM (Release 1507) Administrative Templates (or newer).

### ***18.9.82.1 (L1) Ensure 'Enables or disables Windows Game Recording and Broadcasting' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This setting enables or disables the Windows Game Recording and Broadcasting features.

The recommended state for this setting is: `Disabled`.

#### **Rationale:**

If this setting is allowed users could record and broadcast session info to external sites which is a privacy concern.

#### **Impact:**

Windows Game Recording will not be allowed.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\ApplicationManagement:AllowGameDVR\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\ApplicationManagement:AllowGameDVR

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/ApplicationManagement
          /AllowGameDVR
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (Recording and Broadcasting (streaming) is allowed.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.9.83 Windows Hello for Business (formerly Microsoft Passport for Work)**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Passport.admx/adml` that is included with the Microsoft Windows 10 RTM (Release 1507) Administrative Templates (or newer).

**Note:** This section was initially named *Microsoft Passport for Work* but was renamed by Microsoft to *Windows Hello for Business* starting with the Microsoft Windows 10 Release 1607 & Server 2016 Administrative Templates.

## **18.9.84 Windows Ink Workspace**

This section contains recommendations related to the Windows Ink Workspace.

This Group Policy section is provided by the Group Policy template `WindowsInkWorkspace.admx/adml` that is included with the Microsoft Windows 10 Release 1607 & Server 2016 Administrative Templates (or newer).

### ***18.9.84.1 (L2) Ensure 'Allow suggested apps in Windows Ink Workspace' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

#### **Description:**

This policy setting determines whether suggested apps in Windows Ink Workspace are allowed.

The recommended state for this setting is: Disabled.

#### **Rationale:**

This Microsoft feature is designed to collect data and suggest apps based on that data collected. Disabling this setting will help ensure your data is not shared with any third party.

#### **Impact:**

The suggested apps in Windows Ink Workspace will not be allowed.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\WindowsInk  
WorkSpace:AllowSuggestedAppsInWindowsInkWorkspace\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
Device\WindowsInkWorkspace:AllowSuggestedAppsInWindowsInkWorkspace

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Name:	<Enter name>
Description:	<Enter Description>
OMA-URI:	./Device/Vendor/MSFT/Policy/Config/WindowsInkWorkspace/AllowSuggestedAppsInWindowsInkWorkspace
Data type:	Integer
Value:	0

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (The suggested apps in Windows Ink Workspace will be allowed.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

**18.9.84.2 (L1) Ensure 'Allow Windows Ink Workspace' is set to 'Enabled: On, but disallow access above lock' OR 'Disabled' but not 'Enabled: On' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting determines whether Windows Ink items are allowed above the lock screen.

The recommended state for this setting is: Enabled: On, but disallow access above lock OR Disabled.

**Rationale:**

Allowing any apps to be accessed while system is locked is not recommended. If this feature is permitted, it should only be accessible once a user authenticates with the proper credentials.

**Impact:**

Windows Ink Workspace will not be permitted above the lock screen.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\WindowsInk  
Workspace:AllowWindowsInkWorkspace\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0 OR 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
WindowsInkWorkspace:AllowWindowsInkWorkspace

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to 'Enabled: On, but disallow access above lock OR Disabled

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/WindowsInkWorkspace/Allow
          WindowsInkWorkspace
Data type: Integer
Value: 0 OR 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (Windows Ink Workspace is permitted above the lock screen.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.9.85 Windows Installer**

This section contains recommendations related to Windows Installer.

This Group Policy section is provided by the Group Policy template `MSI.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.9.85.1 (L1) Ensure 'Allow user control over installs' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This setting controls whether users are permitted to change installation options that typically are available only to system administrators. The security features of Windows Installer normally prevent users from changing installation options that are typically reserved for system administrators, such as specifying the directory to which files are installed. If Windows Installer detects that an installation package has permitted the user to change a protected option, it stops the installation and displays a message. These security features operate only when the installation program is running in a privileged security context in which it has access to directories denied to the user.

The recommended state for this setting is: `Disabled`.

#### **Rationale:**

In an enterprise managed environment, only IT staff with administrative rights should be installing or changing software on a system. Allowing users the ability to have any control over installs can risk unapproved software from being installed or removed from a system, which could cause the system to become vulnerable to compromise.

#### **Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\ApplicationManagement:MSIAallowUserControlOverInstall\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\ApplicationManagement:MSIAallowUserControlOverInstall

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/ApplicationManagement/
          MSIAllowUserControlOverInstall
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (The security features of Windows Installer will prevent users from changing installation options typically reserved for system administrators, such as specifying the directory to which files are installed.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**18.9.85.2 (L1) Ensure 'Always install with elevated privileges' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This setting controls whether or not Windows Installer should use system permissions when it installs any program on the system.

**Note:** This setting appears both in the Computer Configuration and User Configuration folders. To make this setting effective, you must enable the setting in both folders.

**Caution:** If enabled, skilled users can take advantage of the permissions this setting grants to change their privileges and gain permanent access to restricted files and folders. Note that the User Configuration version of this setting is not guaranteed to be secure.

The recommended state for this setting is: Disabled.

**Rationale:**

Users with limited privileges can exploit this feature by creating a Windows Installer installation package that creates a new local account that belongs to the local built-in Administrators group, adds their current account to the local built-in Administrators group, installs malicious software, or performs other unauthorized activities.

**Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\ApplicationManagement:MSIAlwaysInstallWithElevatedPrivileges\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\ApplicationManagement:MSIAlwaysInstallWithElevatedPrivileges

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/ApplicationManagement/
          MSIAlwaysInstallWithElevatedPrivileges
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

**Note #2** This recommendation can also be applied via the *Device restrictions/App Store/Install apps with elevated privileges* profile.

## **Default Value:**

Disabled. (Windows Installer will apply the current user's permissions when it installs programs that a system administrator does not distribute or offer. This will prevent standard users from installing applications that affect system-wide configuration items.)

**CIS Controls:**

Version 7

**4.3 Ensure the Use of Dedicated Administrative Accounts**

Ensure that all users with administrative account access use a dedicated or secondary account for elevated activities. This account should only be used for administrative activities and not internet browsing, email, or similar activities.

## **18.9.86 Windows Logon Options**

This section contains recommendations related to Windows Logon Options.

This Group Policy section is provided by the Group Policy template `WinLogon.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### *18.9.86.1 (L1) Ensure 'Sign-in and lock last interactive user automatically after a restart' is set to 'Disabled' (Automated)*

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting controls whether a device will automatically sign-in the last interactive user after Windows Update restarts the system.

The recommended state for this setting is: `Disabled`.

#### **Rationale:**

Disabling this feature will prevent the caching of user's credentials and unauthorized use of the device, and also ensure the user is aware of the restart.

#### **Impact:**

The device does not store the user's credentials for automatic sign-in after a Windows Update restart. The users' lock screen apps are not restarted after the system restarts. The user is required to present the logon credentials in order to proceed after restart.

## **Audit:**

Navigate to the following registry location and confirm it is set to 2. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\WindowsLog  
on:AllowAutomaticRestartSignOn_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
WindowsLogon:AllowAutomaticRestartSignOn
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Policies\System:  
DisableAutomaticRestartSignOn
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Windows Logon Options
Setting Name:	Sign-in and lock last interactive user automatically after a restart
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (The device securely saves the user's credentials (including the user name, domain and encrypted password) to configure automatic sign-in after a Windows Update restart. After the Windows Update restart, the user is automatically signed-in and the session is automatically locked with all the lock screen apps configured for that user.)

## **CIS Controls:**

Version 7

### **16.11 Lock Workstation Sessions After Inactivity**

Automatically lock workstation sessions after a standard period of inactivity.

## ***18.9.87 Windows Mail***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsMail.admx/adml` that is only included with the Microsoft Windows Vista through the Windows 10 Release 1703 Administrative Templates.

## ***18.9.88 Windows Media Center***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `MediaCenter.admx/adml` that is only included with the Microsoft Windows Vista through Windows 10 Release 1511 Administrative Templates.

## ***18.9.89 Windows Media Digital Rights Management***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsMediaDRM.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## ***18.9.90 Windows Media Player***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsMediaPlayer.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.91 Windows Meeting Space**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsCollaboration.admx/adml` that is only included with the Microsoft Windows Vista and Server 2008 (non-R2) Administrative Templates.

## **18.9.92 Windows Messenger**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsMessenger.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.93 Windows Mobility Center**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `MobilePCMobilityCenter.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **18.9.94 Windows Movie Maker**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `MovieMaker.admx/adml` that is only included with the Microsoft Windows Vista and Server 2008 (non-R2) Administrative Templates.

## **18.9.95 Windows PowerShell**

This section contains recommendations related to Windows PowerShell.

This Group Policy section is provided by the Group Policy template `PowerShellExecutionPolicy.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

### ***18.9.95.1 (L1) Ensure 'Turn on PowerShell Script Block Logging' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting enables logging of all PowerShell script input to the Microsoft-Windows-PowerShell/Operational event log.

The recommended state for this setting is: `Disabled`.

**Note:** In Microsoft's own hardening guidance, they recommend the opposite value, `Enabled`, because having this data logged improves investigations of PowerShell attack incidents. However, the default ACL on the PowerShell Operational log allows Interactive User (i.e. *any* logged on user) to read it, and therefore possibly expose passwords or other sensitive information to unauthorized users. If Microsoft locks down the default ACL on that log in the future (e.g. to restrict it only to Administrators), then we will revisit this recommendation in a future release.

#### **Rationale:**

There are potential risks of capturing passwords in the PowerShell logs. This setting should only be needed for debugging purposes, and not in normal operation, it is important to ensure this is set to `Disabled`.

#### **Impact:**

Logging of PowerShell script input is disabled.

## **Audit:**

Navigate to the following registry location and confirm it is set to 2. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\WindowsPowerShell:TurnOnPowerShellScriptBlockLogging_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\WindowsPowerShell:TurnOnPowerShellScriptBlockLogging
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\PowerShell\ScriptBlockLogging:EnableScriptBlockLogging
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/WindowsPowerShell/
          TurnOnPowerShellScriptBlockLogging
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (PowerShell will log script blocks the first time they are used.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **18.9.96 Windows Reliability Analysis**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `RacWmiProv.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

## **18.9.97 Windows Remote Management (WinRM)**

This section contains recommendations related to Windows Remote Management (WinRM).

This Group Policy section is provided by the Group Policy template `WindowsRemoteManagement.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.9.97.1 WinRM Client**

This section contains recommendations related to the Windows Remote Management (WinRM) client.

This Group Policy section is provided by the Group Policy template `WindowsRemoteManagement.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

#### ***18.9.97.1.1 (L1) Ensure 'Allow Basic authentication' is set to 'Disabled' (Automated)***

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

This policy setting allows you to manage whether the Windows Remote Management (WinRM) client uses Basic authentication.

The recommended state for this setting is: `Disabled`.

**Note:** Clients that use Microsoft's Exchange Online service (Office 365) will require an exception to this recommendation, to instead have this setting set to Enabled. Exchange Online uses Basic authentication over HTTPS, and so the Exchange Online authentication traffic will still be safely encrypted.

##### **Rationale:**

Basic authentication is less robust than other authentication methods available in WinRM because credentials including passwords are transmitted in plain text. An attacker who is able to capture packets on the network where WinRM is running may be able to determine the credentials used for accessing remote hosts via WinRM.

**Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 2. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteManagement:AllowBasicAuthentication\_Client\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\RemoteManagement:AllowBasicAuthentication\_Client

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\WinRM\Client:AllowBasic

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to **Disabled**:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Windows Remote Management (WinRM)/WinRM Client
Setting Name:	Allow Basic authentication
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (The WinRM client does not use Basic authentication.)

## **CIS Controls:**

Version 7

### **16.5 Encrypt Transmittal of Username and Authentication Credentials**

Ensure that all account usernames and authentication credentials are transmitted across networks using encrypted channels.

**18.9.97.1.2 (L1) Ensure 'Allow unencrypted traffic' is set to 'Disabled'  
(Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting allows you to manage whether the Windows Remote Management (WinRM) client sends and receives unencrypted messages over the network.

The recommended state for this setting is: Disabled.

**Rationale:**

Encrypting WinRM network traffic reduces the risk of an attacker viewing or modifying WinRM messages as they transit the network.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 2. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteManagement:AllowUnencryptedTraffic\_Client\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\RemoteManagement:AllowUnencryptedTraffic\_Client

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\WinRM\Client:AllowUnencryptedTraffic

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Windows Remote Management (WinRM) /WinRM Client
Setting Name:	Allow unencrypted traffic
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (The WinRM client sends or receives only encrypted messages over the network.)

## **CIS Controls:**

Version 7

### **14.4 Encrypt All Sensitive Information in Transit**

Encrypt all sensitive information in transit.

**18.9.97.1.3 (L1) Ensure 'Disallow Digest authentication' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting allows you to manage whether the Windows Remote Management (WinRM) client will not use Digest authentication.

The recommended state for this setting is: Enabled.

**Rationale:**

Digest authentication is less robust than other authentication methods available in WinRM, an attacker who is able to capture packets on the network where WinRM is running may be able to determine the credentials used for accessing remote hosts via WinRM.

**Impact:**

The WinRM client will not use Digest authentication.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteManagement:DisallowDigestAuthentication\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\RemoteManagement:DisallowDigestAuthentication

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\WinRM\Client:AllowDigest

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Windows Remote Management (WinRM) /WinRM Client
Setting Name:	Disallow Digest authentication
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (The WinRM client will use Digest authentication.)

## **CIS Controls:**

Version 7

### **16.5 Encrypt Transmittal of Username and Authentication Credentials**

Ensure that all account usernames and authentication credentials are transmitted across networks using encrypted channels.

## **18.9.97.2 WinRM Service**

This section contains recommendations related to the Windows Remote Management (WinRM) service.

This Group Policy section is provided by the Group Policy template `WindowsRemoteManagement.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.9.97.2.1 (L1) Ensure 'Allow Basic authentication' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting allows you to manage whether the Windows Remote Management (WinRM) service accepts Basic authentication from a remote client.

The recommended state for this setting is: `Disabled`.

#### **Rationale:**

Basic authentication is less robust than other authentication methods available in WinRM because credentials including passwords are transmitted in plain text. An attacker who is able to capture packets on the network where WinRM is running may be able to determine the credentials used for accessing remote hosts via WinRM.

#### **Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 2. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteManagement:AllowBasicAuthentication\_Service\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\RemoteManagement:AllowBasicAuthentication\_Service

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\WinRM\Service:AllowBasic

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Windows Remote Management (WinRM) /WinRM Service
Setting Name:	Allow Basic authentication
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (The WinRM service will not accept Basic authentication from a remote client.)

## **CIS Controls:**

Version 7

### **16.5 Encrypt Transmittal of Username and Authentication Credentials**

Ensure that all account usernames and authentication credentials are transmitted across networks using encrypted channels.

**18.9.97.2.2 (L2) Ensure 'Allow remote server management through WinRM' is set to 'Disabled' (Automated)**

**Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

**Description:**

This policy setting allows you to manage whether the Windows Remote Management (WinRM) service automatically listens on the network for requests on the HTTP transport over the default HTTP port.

The recommended state for this setting is: Disabled.

**Rationale:**

Any feature is a potential avenue of attack, those that enable inbound network connections are particularly risky. Only enable the use of the Windows Remote Management (WinRM) service on trusted networks and when feasible employ additional controls such as IPsec.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 2. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteManagement:AllowRemoteServerManagement_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\RemoteManagement:AllowRemoteServerManagement
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows\WinRM\Service:AllowAutoConfig
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Windows Remote Management (WinRM) /WinRM Service
Setting Name:	Allow remote server management through WinRM
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (The WinRM service will not respond to requests from a remote computer, regardless of whether or not any WinRM listeners are configured.)

## **CIS Controls:**

Version 7

### **9.2 Ensure Only Approved Ports, Protocols and Services Are Running**

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

### **9.3 Perform Regular Automated Port Scans**

Perform automated port scans on a regular basis against all systems and alert if unauthorized ports are detected on a system.

**18.9.97.2.3 (L1) Ensure 'Allow unencrypted traffic' is set to 'Disabled'  
(Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting allows you to manage whether the Windows Remote Management (WinRM) service sends and receives unencrypted messages over the network.

The recommended state for this setting is: Disabled.

**Rationale:**

Encrypting WinRM network traffic reduces the risk of an attacker viewing or modifying WinRM messages as they transit the network.

**Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 2. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteManagement:AllowUnencryptedTraffic\_Service\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\RemoteManagement:AllowUnencryptedTraffic\_Service

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\WinRM\Service:AllowUnencryptedTraffic

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Windows Remote Management (WinRM) /WinRM Service
Setting Name:	Allow unencrypted traffic
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (The WinRM service sends or receives only encrypted messages over the network.)

## **CIS Controls:**

Version 7

### **14.4 Encrypt All Sensitive Information in Transit**

Encrypt all sensitive information in transit.

#### **18.9.97.2.4 (L1) Ensure 'Disallow WinRM from storing RunAs credentials' is set to 'Enabled' (Automated)**

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

This policy setting allows you to manage whether the Windows Remote Management (WinRM) service will allow RunAs credentials to be stored for any plug-ins.

The recommended state for this setting is: Enabled.

**Note:** If you enable and then disable this policy setting, any values that were previously configured for RunAsPassword will need to be reset.

##### **Rationale:**

Although the ability to store RunAs credentials is a convenient feature it increases the risk of account compromise slightly. For example, if you forget to lock your desktop before leaving it unattended for a few minutes another person could access not only the desktop of your computer but also any hosts you manage via WinRM with cached RunAs credentials.

##### **Impact:**

The WinRM service will not allow the RunAsUser or RunAsPassword configuration values to be set for any plug-ins. If a plug-in has already set the RunAsUser and RunAsPassword configuration values, the RunAsPassword configuration value will be erased from the credential store on the computer.

If this setting is later Disabled again, any values that were previously configured for RunAsPassword will need to be reset.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteManagement:DisallowStoringOfRunAsCredentials\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\RemoteManagement:DisallowStoringOfRunAsCredentials

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\WinRM\Service:DisableRunAs

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Windows Remote Management (WinRM) /WinRM Service
Setting Name:	Disallow WinRM from storing RunAs credentials
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (The WinRM service will allow the `RunAsUser` and `RunAsPassword` configuration values to be set for plug-ins and the `RunAsPassword` value will be stored securely.)

## **CIS Controls:**

Version 7

### **14.3 Disable Workstation to Workstation Communication**

Disable all workstation to workstation communication to limit an attacker's ability to move laterally and compromise neighboring systems, through technologies such as Private VLANs or microsegmentation.

## **18.9.98 Windows Remote Shell**

This section contains settings related to Windows Remote Shell (WinRS).

This Group Policy section is provided by the Group Policy template `WindowsRemoteShell.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***18.9.98.1 (L2) Ensure 'Allow Remote Shell Access' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 2 (L2) - High Security/Sensitive Data Environment (limited functionality)

#### **Description:**

This policy setting allows you to manage configuration of remote access to all supported shells to execute scripts and commands.

The recommended state for this setting is: `Disabled`.

**Note:** The GPME help text for this setting is incorrectly worded, implying that configuring it to `Enabled` will reject new Remote Shell connections, and setting it to `Disabled` will allow Remote Shell connections. The opposite is true (and is consistent with the title of the setting). This is a wording mistake by Microsoft in the Administrative Template.

#### **Rationale:**

Any feature is a potential avenue of attack, those that enable inbound network connections are particularly risky. Only enable the use of the Windows Remote Shell on trusted networks and when feasible employ additional controls such as IPsec.

#### **Impact:**

New Remote Shell connections are not allowed and are rejected by the workstation.

## **Audit:**

Navigate to the following registry location and confirm it is set to 2. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\RemoteShell:AllowRemoteShellAccess\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <disabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Device\RemoteShell:AllowRemoteShellAccess

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Windows\WinRM\Service\WinRS:AllowRemoteShellAccess

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Computer Configuration/Windows Components/Windows Remote Shell
Setting Name:	Allow Remote Shell Access
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (New Remote Shell connections are allowed.)

## **CIS Controls:**

Version 7

### 9.2 Ensure Only Approved Ports, Protocols and Services Are Running

Ensure that only network ports, protocols, and services listening on a system with validated business needs, are running on each system.

## **18.9.99 Windows Security (formerly Windows Defender Security Center)**

This section contains recommendations related to the Windows Security Center console settings.

This Group Policy section is provided by the Group Policy template `WindowsDefenderSecurityCenter.admx/adml` that is included with the Microsoft Windows 10 Release 1709 Administrative Templates (or newer).

**Note:** This section was originally named *Windows Defender Security Center* but was renamed by Microsoft to *Windows Security* starting with the Microsoft Windows 10 Release 1809 & Server 2019 Administrative Templates.

### **18.9.99.1 Account protection**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsDefenderSecurityCenter.admx/adml` that is included with the Microsoft Windows 10 Release 1803 Administrative Templates (or newer).

## **18.9.99.2 App and browser protection**

This section contains App and browser protection settings.

This Group Policy section is provided by the Group Policy template `WindowsDefenderSecurityCenter.admx/adml` that is included with the Microsoft Windows 10 Release 1709 Administrative Templates (or newer).

### ***18.9.99.2.1 (L1) Ensure 'Prevent users from modifying settings' is set to 'Enabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting prevent users from making changes to the Exploit protection settings area in the Windows Security settings.

The recommended state for this setting is: Enabled.

#### **Rationale:**

Only authorized IT staff should be able to make changes to the exploit protection settings in order to ensure the organizations specific configuration is not modified.

#### **Impact:**

Local users cannot make changes in the Exploit protection settings area.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\WindowsDefenderSecurityCenter:DisallowExploitProtectionOverride\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\WindowsDefenderSecurityCenter:DisallowExploitProtectionOverride

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/WindowsDefenderSecurity
          Center/DisallowExploitProtectionOverride
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Local users are allowed to make changes in the Exploit protection settings area.)

## **CIS Controls:**

Version 7

### 8.3 Enable Operating System Anti-Exploitation Features/ Deploy Anti-Exploit Technologies

Enable anti-exploitation features such as Data Execution Prevention (DEP) or Address Space Layout Randomization (ASLR) that are available in an operating system or deploy appropriate toolkits that can be configured to apply protection to a broader set of applications and executables.

## ***18.9.100 Windows SideShow***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `SideShow.admx/adml` that is only included with the Microsoft Windows Vista Administrative Templates through Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates.

## ***18.9.101 Windows System Resource Manager***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `SystemResourceManager.admx/adml` that is only included with the Microsoft Windows Vista through Windows 8.0 & Server 2012 (non-R2) Administrative Templates.

## **18.9.102 Windows Update**

This section contains recommendations related to Windows Update.

This Group Policy section is provided by the Group Policy template `WindowsUpdate.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **18.9.102.1 Windows Update for Business (formerly Defer Windows Updates)**

This section contains recommendations related to Windows Update for Business.

This Group Policy section is provided by the Group Policy template `WindowsUpdate.admx/adml` that is included with the Microsoft Windows 10 Release 1607 & Server 2016 Administrative Templates (or newer).

**Note:** This section was initially named *Defer Windows Updates* but was renamed by Microsoft to *Windows Update for Business* starting with the Microsoft Windows 10 Release 1709 Administrative Templates.

#### **18.9.102.1.1 (L1) Ensure 'Manage preview builds' is set to 'Enabled: Disable preview builds' (Automated)**

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

This policy setting determines whether users can access the Windows Insider Program controls in Settings -> Update and Security. These controls enable users to make their devices available for downloading and installing preview (beta) builds of Windows software.

The recommended state for this setting is: Enabled: Disable preview builds.

**Rationale:**

It can be risky for experimental features to be allowed in an enterprise managed environment because this can introduce bugs and security holes into systems, making it easier for an attacker to gain access. It is generally preferred to only use production-ready builds.

**Impact:**

Preview builds are prevented from installing on the device.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Update:ManagePreviewBuilds\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Update:ManagePreviewBuilds

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Disable preview builds

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Update/ManagePreviewBuilds
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Preview builds are not installed on the device, unless the user opts-in through Settings -> Update and Security)

## **CIS Controls:**

Version 7

### **2.6 Address unapproved software**

Ensure that unauthorized software is either removed or the inventory is updated in a timely manner

## **18.9.102.1.2 (L1) Ensure 'Select when Quality Updates are received' is set to 'Enabled: 0 days' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This setting controls when Quality Updates are received.

The recommended state for this setting is: Enabled: 0 days.

**Note:** If the "Allow Telemetry" policy is set to 0, this policy will have no effect.

**Note #2:** Starting with Windows 10 R1607, Microsoft introduced a new Windows Update (WU) client behavior called **Dual Scan**, with an eye to cloud-based update management. In some cases, this Dual Scan feature can interfere with Windows Updates from Windows Server Update Services (WSUS) and/or manual WU updates. If you are using WSUS in your environment, you may need to set the above setting to `Not Configured` or configure the setting *Do not allow update deferral policies to cause scans against Windows Update* (added in the Windows 10 Release 1709 Administrative Templates) in order to prevent the Dual Scan feature from interfering. More information on Dual Scan is available at these links:

- [Demystifying “Dual Scan” – WSUS Product Team Blog](#)
- [Improving Dual Scan on 1607 – WSUS Product Team Blog](#)

### **Rationale:**

Quality Updates can contain important bug fixes and/or security patches, and should be installed as soon as possible.

### **Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Update:PauseQualityUpdates\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Update:PauseQualityUpdates

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled: Semi-Annual Channel, 180 or more days

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Update/PauseQualityUpdates
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled: 0 days. (Install new Quality Updates as soon as they are available.)

## **CIS Controls:**

Version 7

### **3.4 Deploy Automated Operating System Patch Management Tools**

Deploy automated software update tools in order to ensure that the operating systems are running the most recent security updates provided by the software vendor.

## **18.9.102.2 (L1) Ensure 'Configure Automatic Updates' is set to 'Enabled' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy setting specifies whether computers in your environment will receive security updates from Windows Update or WSUS. If you configure this policy setting to Enabled, the operating system will recognize when a network connection is available and then use the network connection to search Windows Update or your designated intranet site for updates that apply to them.

After you configure this policy setting to Enabled, select one of the following three options in the Configure Automatic Updates Properties dialog box to specify how the service will work:

- 2 - Notify for download and auto install (*Notify before downloading any updates*)
- 3 - Auto download and notify for install (*Download the updates automatically and notify when they are ready to be installed.*) (*Default setting*)
- 4 - Auto download and schedule the install (*Automatically download updates and install them on the schedule specified below.*)
- 5 - Allow local admin to choose setting (*Leave decision on above choices up to the local Administrators (Not Recommended)*)

The recommended state for this setting is: Enabled.

**Note:** The sub-setting "*Configure automatic updating:*" has 4 possible values – all of them are valid depending on specific organizational needs, however if feasible we suggest using a value of 4 – Auto download and schedule the install. This suggestion is not a scored requirement.

**Note #2:** Organizations that utilize a 3rd-party solution for patching may choose to exempt themselves from this recommendation, and instead configure it to `Disabled` so that the native Windows Update mechanism does not interfere with the 3rd-party patching process.

**Rationale:**

Although each version of Windows is thoroughly tested before release, it is possible that problems will be discovered after the products are shipped. The Configure Automatic Updates setting can help you ensure that the computers in your environment will always have the most recent critical operating system updates and service packs installed.

**Impact:**

Critical operating system updates and service packs will be installed as necessary.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Update:AllowAutoUpdate_ProviderSet
```

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Update:AllowAutoUpdate
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Update/AllowAutoUpdate
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled: 3 - Auto download and notify for install. (Windows finds updates that apply to the computer and downloads them in the background (the user is not notified or interrupted during this process). When the downloads are complete, users will be notified that they are ready to install. After going to Windows Update, users can install them.)

## **CIS Controls:**

Version 7

### **3.4 Deploy Automated Operating System Patch Management Tools**

Deploy automated software update tools in order to ensure that the operating systems are running the most recent security updates provided by the software vendor.

### ***18.9.102.3 (L1) Ensure 'Configure Automatic Updates: Scheduled install day' is set to '0 - Every day' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting specifies when computers in your environment will receive security updates from Windows Update or WSUS.

The recommended state for this setting is: 0 – Every day.

**Note:** This setting is only applicable if 4 – Auto download and schedule the install is selected in Rule 18.9.102.2. It will have no impact if any other option is selected.

#### **Rationale:**

Although each version of Windows is thoroughly tested before release, it is possible that problems will be discovered after the products are shipped. The Configure Automatic Updates setting can help you ensure that the computers in your environment will always have the most recent critical operating system updates and service packs installed.

#### **Impact:**

If 4 – Auto download and schedule the install is selected in Rule 18.9.102.2, critical operating system updates and service packs will automatically download every day (at 3:00 A.M., by default).

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Update:Sch  
eduledInstallDay\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
Update:ScheduledInstallDay

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to 0 – Every day

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Update/ScheduledInstallDay
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Not Defined. (Since the default value of Configure Automatic Updates is 3 – Auto download and notify for install, this setting is not applicable by default.)

## **CIS Controls:**

Version 7

### **3.4 Deploy Automated Operating System Patch Management Tools**

Deploy automated software update tools in order to ensure that the operating systems are running the most recent security updates provided by the software vendor.

## **18.9.102.4 (L1) Ensure 'Remove access to "Pause updates" feature' is set to 'Enabled' (Automated)**

### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

### **Description:**

This policy removes access to "Pause updates" feature.

The recommended state for this setting is: Enabled.

### **Rationale:**

In order to ensure security and system updates are applied, system administrators should control when updates are applied to systems.

### **Impact:**

Users will not be able to select the "Pause updates" option in Windows Update to prevent updates from being installed on a system.

### **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

`HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Update:SetDisablePauseUXAccess_ProviderSet`

### **To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

`HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Update:SetDisablePauseUXAccess`

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceId* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./Device/Vendor/MSFT/Policy/Config/Update/
          SetDisablePauseUXAccess
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Users have access to the "Pause updates" feature.)

## **CIS Controls:**

Version 7

### **3.4 Deploy Automated Operating System Patch Management Tools**

Deploy automated software update tools in order to ensure that the operating systems are running the most recent security updates provided by the software vendor.

## **19 Administrative Templates (User)**

This section contains user-based recommendations from Group Policy Administrative Templates (ADMX).

### **19.1 Control Panel**

This section contains recommendations for Control Panel settings.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

#### **19.1.1 Add or Remove Programs**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `AddRemovePrograms.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

#### **19.1.2 Display**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `ControlPanelDisplay.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

#### **19.1.3 Personalization (formerly Desktop Themes)**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `ControlPanelDisplay.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

**Note:** This section was initially named *Desktop Themes* but was renamed by Microsoft to *Personalization* starting with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates.

## **19.2 Desktop**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.3 Network**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.4 Shared Folders**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `SharedFolders.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.5 Start Menu and Taskbar**

This section contains recommendations for Start Menu and Taskbar settings.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **19.5.1 Notifications**

This section contains recommendations for Notification settings.

This Group Policy section is provided by the Group Policy template `WPN.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

#### *19.5.1.1 (L1) Ensure 'Turn off toast notifications on the lock screen' is set to 'Blocked' (Automated)*

##### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

##### **Description:**

This policy setting turns off toast notifications on the lock screen.

The recommended state for this setting is `Blocked`.

##### **Rationale:**

While this feature can be handy for users, applications that provide toast notifications might display sensitive personal or business data while the device is left unattended.

##### **Impact:**

Applications will not be able to raise toast notifications on the lock screen.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\AboveLock:  
AllowToasts\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\  
AboveLock:AllowToasts

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Blocked:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Device restrictions)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Device Restrictions/Locked Screen Experience
Setting Name:	Toast notifications on lock screen
Configuration:	Block

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Toast notifications on the lock screen are enabled and can be turned off by the administrator or user.)

## **CIS Controls:**

Version 7

### **16.11 Lock Workstation Sessions After Inactivity**

Automatically lock workstation sessions after a standard period of inactivity.

## **19.6 System**

This section contains recommendations for System settings.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **19.6.1 Ctrl+Alt+Del Options**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `CtrlAltDel.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **19.6.2 Display**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Display.admx/adml` that is included with the Microsoft Windows 10 Release 1803 Administrative Templates (or newer).

### **19.6.3 Driver Installation**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `DeviceInstallation.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **19.6.4 Folder Redirection**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `FolderRedirection.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.6.5 Group Policy**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `GroupPolicy.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.6.6 Internet Communication Management**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.7 Windows Components**

This section contains recommendations for Windows Component settings.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **19.7.1 Add features to Windows 8 / 8.1 / 10 (formerly Windows Anytime Upgrade)**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsAnytimeUpgrade.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

**Note:** This section was initially named *Windows Anytime Upgrade* but was renamed by Microsoft to *Add features to Windows x* starting with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates.

## **19.7.2 App runtime**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `AppXRuntime.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

## **19.7.3 Application Compatibility**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `AppCompat.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.7.4 Attachment Manager**

This section contains recommendations related to Attachment Manager.

This Group Policy section is provided by the Group Policy template `AttachmentManager.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***19.7.4.1 (L1) Ensure 'Do not preserve zone information in file attachments' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting allows you to manage whether Windows marks file attachments with information about their zone of origin (such as restricted, Internet, intranet, local). This requires NTFS in order to function correctly, and will fail without notice on FAT32. By not preserving the zone information, Windows cannot make proper risk assessments.

The recommended state for this setting is: `Disabled`.

**Note:** The Attachment Manager feature warns users when opening or executing files which are marked as being from an untrusted source, unless/until the file's zone information has been removed via the "Unblock" button on the file's properties or via a separate tool such as [Microsoft Sysinternals Streams](#).

#### **Rationale:**

A file that is downloaded from a computer in the Internet or Restricted Sites zone may be moved to a location that makes it appear safe, like an intranet file share, and executed by an unsuspecting user. The Attachment Manager feature will warn users when opening or executing files which are marked as being from an untrusted source, unless/until the file's zone information has been removed.

#### **Impact:**

None - this is the default behavior.

## **Audit:**

Navigate to the following registry location and confirm it is set to 2. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\{USER  
SID}\AttachmentManager:DoNotPreserveZoneInformation_ProviderSet
```

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{USER  
GUID}\AttachmentManager:DoNotPreserveZoneInformation
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 2.

```
HKEY_USERS\[USER  
SID]\Software\Microsoft\Windows\CurrentVersion\Policies\Attachments:SaveZoneI  
nformation
```

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Administrative Templates/User Configuration/Windows Components/Attachment Manager
Setting Name:	Do not preserve zone information in file attachments
Configuration:	Disabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Windows marks file attachments with their zone information.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

**19.7.4.2 (L1) Ensure 'Notify antivirus programs when opening attachments' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting manages the behavior for notifying registered antivirus programs. If multiple programs are registered, they will all be notified.

The recommended state for this setting is: Enabled.

**Note:** An updated antivirus program must be installed for this policy setting to function properly.

**Rationale:**

Antivirus programs that do not perform on-access checks may not be able to scan downloaded files.

**Impact:**

Windows tells the registered antivirus program(s) to scan the file when a user opens a file attachment. If the antivirus program fails, the attachment is blocked from being opened.

## **Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\{USER SID}\AttachmentManager:NotifyAntivirusProgram\_ProviderSet

**To confirm that the policy was properly applied to the system, check one of the following locations:**

Navigate to the following registry location and confirm it is set to <enabled/>.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{USER GUID}\AttachmentManager:NotifyAntivirusProgram

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

*OR*

Navigate to the following registry location and confirm it is set to 3.

HKEY\_USERS\[USER SID]\Software\Microsoft\Windows\CurrentVersion\Policies\Attachments:ScanWithAntiVirus

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Administrative Templates)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

Path:	Administrative Templates/User Configuration/Windows Components/Attachment Manager
Setting Name:	Notify antivirus programs when opening attachments
Configuration:	Enabled

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Windows does not call the registered antivirus program(s) when file attachments are opened.)

## **CIS Controls:**

Version 7

### **8.1 Utilize Centrally Managed Anti-malware Software**

Utilize centrally managed anti-malware software to continuously monitor and defend each of the organization's workstations and servers.

## ***19.7.5 AutoPlay Policies***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `AutoPlay.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## ***19.7.6 Backup***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `UserdataBackup.admx/adml` that is included only with the Microsoft Windows Vista through Windows 8.0 & Server 2012 (non-R2) Administrative Templates, as well as the Microsoft Windows 10 RTM (Release 1507) and Windows 10 Release 1511 Administrative Templates.

## ***19.7.7 Calculator***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Programs.admx/adml` that is included with the Microsoft Windows 10 Release 2004 Administrative Templates (or newer).

## **19.7.8 Cloud Content**

This section contains recommendations for Cloud Content.

This Group Policy section is provided by the Group Policy template `CloudContent.admx/adml` that is included with the Microsoft Windows 10 Release 1607 & Server 2016 Administrative Templates (or newer).

### ***19.7.8.1 (L1) Ensure 'Configure Windows spotlight on lock screen' is set to Disabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This policy setting lets you configure Windows Spotlight on the lock screen.

The recommended state for this setting is: `Disabled`.

**Note:** [Per Microsoft TechNet](#), this policy setting only applies to Windows 10 Enterprise and Windows 10 Education editions.

#### **Rationale:**

Enabling this setting will help ensure your data is not shared with any third party. The Windows Spotlight feature collects data and uses that data to display suggested apps as well as images from the internet.

#### **Impact:**

Windows Spotlight will be turned off and users will no longer be able to select it as their lock screen.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Experience :ConfigureWindowsSpotlightOnLockScreen_ProviderSet
```

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 2.

```
HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Experience:ConfigureWindowsSpotlightOnLockScreen
```

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./User/Vendor/MSFT/Policy/Config/Experience/Configure
          WindowsSpotlightOnLockScreen
Data type: Integer
Value: 2
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Enabled. (Windows Spotlight is set as the lock screen provider.)

## **CIS Controls:**

Version 7

### **16.11 Lock Workstation Sessions After Inactivity**

Automatically lock workstation sessions after a standard period of inactivity.

**19.7.8.2 (L1) Ensure 'Do not suggest third-party content in Windows spotlight' is set to 'Enabled' (Automated)**

**Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

**Description:**

This policy setting determines whether Windows will suggest apps and content from third-party software publishers.

The recommended state for this setting is: Enabled.

**Rationale:**

Enabling this setting will help ensure your data is not shared with any third party. The Windows Spotlight feature collects data and uses that data to display suggested apps as well as images from the internet.

**Impact:**

Windows Spotlight on lock screen, Windows tips, Microsoft consumer features and other related features will no longer suggest apps and content from third-party software publishers. Users may still see suggestions and tips to make them more productive with Microsoft features and apps.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\Experience :AllowThirdPartySuggestionsInWindowsSpotlight\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 1.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\Experience :AllowThirdPartySuggestionsInWindowsSpotlight

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Enabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./User/Vendor/MSFT/Policy/Config/Experience/Allow
          ThirdPartySuggestionsInWindowsSpotlight
Data type: Integer
Value: 1
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Apps and content from third-party software publishers will be suggested in addition to Microsoft apps and content.)

## **CIS Controls:**

Version 7

### **5.1 Establish Secure Configurations**

Maintain documented, standard security configuration standards for all authorized operating systems and software.

## **19.7.9 Credential User Interface**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `CredUI.admx/adml` that is included with the Microsoft Windows 10 Release 1607 & Server 2016 Administrative Templates (or newer).

## **19.7.10 Data Collection and Preview Builds**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `DataCollection.admx/adml` that is included with the Microsoft Windows 10 Release 1607 & Server 2016 Administrative Templates (or newer).

## **19.7.11 Desktop Gadgets**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `sidebar.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

## **19.7.12 Desktop Window Manager**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `DWM.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **19.7.13 Digital Locker**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `DigitalLocker.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **19.7.14 Edge UI**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `EdgeUI.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

### **19.7.15 File Explorer (formerly Windows Explorer)**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

**Note:** This section was initially named *Windows Explorer* but was renamed by Microsoft to *File Explorer* starting with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates.

### **19.7.16 File Revocation**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `FileRevocation.admx/adml` that is included with the Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates (or newer).

## **19.7.17 IME**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `EAIME.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates (or newer).

## **19.7.18 Import Video**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `CaptureWizard.admx/adml` that is only included with the Microsoft Windows Vista and Windows Server 2008 (non-R2) Administrative Templates.

## **19.7.19 Instant Search**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WordWheel.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.7.20 Internet Explorer**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `IinetRes.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.7.21 Location and Sensors**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Sensors.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

## **19.7.22 Microsoft Edge**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `MicrosoftEdge.admx/adml` that is included with the Microsoft Windows 10 RTM (Release 1507) Administrative Templates (or newer).

## **19.7.23 Microsoft Management Console**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `MMC.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.7.24 Microsoft User Experience Virtualization**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `UserExperienceVirtualization.admx/adml` that is included with the Microsoft Windows 10 Release 1607 & Server 2016 Administrative Templates (or newer).

## **19.7.25 NetMeeting**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Conf.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.7.26 Network Projector**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `NetworkProjection.admx/adml` that is only included with the Microsoft Windows Vista through the Windows 8.1 Update & Server 2012 R2 Update Administrative Templates.

## **19.7.27 Network Sharing**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Sharing.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.7.28 OOBE**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `OOBE.admx/adml` that is included with the Microsoft Windows 10 Release 1809 and Server 2019 Administrative Templates (or newer).

## **19.7.29 Presentation Settings**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `MobilePCPresentationSettings.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.7.30 Remote Desktop Services (formerly Terminal Services)**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `TerminalServer.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

**Note:** This section was initially named *Terminal Services* but was renamed by Microsoft to *Remote Desktop Services* starting with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates.

### **19.7.31 RSS Feeds**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `InetRes.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **19.7.32 Search**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Search.admx/adml` that is included with the Microsoft Windows 7 & Server 2008 R2 Administrative Templates (or newer).

### **19.7.33 Sound Recorder**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `SoundRec.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### **19.7.34 Store**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WinStoreUI.admx/adml` that is included with the Microsoft Windows 8.0 & Server 2012 (non-R2) Administrative Templates and Microsoft Windows 8.1 & Server 2012 R2 Administrative Templates, or by the Group Policy template `WindowsStore.admx/adml` that is included with the Microsoft Windows 10 Release 1511 Administrative Templates (or newer).

## **19.7.35 Tablet PC**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Windows.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.7.36 Task Scheduler**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `TaskScheduler.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.7.37 Windows Calendar**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WinCal.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.7.38 Windows Color System**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsColorSystem.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.7.39 Windows Defender SmartScreen**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `SmartScreen.admx/adml` that is included with the Microsoft Windows 10 Release 1703 Administrative Templates (or newer).

## **19.7.40 Windows Error Reporting**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `ErrorReporting.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

## **19.7.41 Windows Hello for Business (formerly Microsoft Passport for Work)**

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `Passport.admx/adml` that is included with the Microsoft Windows 10 RTM (Release 1507) Administrative Templates (or newer).

**Note:** This section was initially named *Microsoft Passport for Work* but was renamed by Microsoft to *Windows Hello for Business* starting with the Microsoft Windows 10 Release 1607 & Server 2016 Administrative Templates.

## **19.7.42 Windows Installer**

This section contains recommendations related to Windows Installer.

This Group Policy section is provided by the Group Policy template `MSI.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***19.7.42.1 (L1) Ensure 'Always install with elevated privileges' is set to 'Disabled' (Automated)***

#### **Profile Applicability:**

- Level 1 (L1) - Corporate/Enterprise Environment (general use)

#### **Description:**

This setting controls whether or not Windows Installer should use system permissions when it installs any program on the system.

**Note:** This setting appears both in the Computer Configuration and User Configuration folders. To make this setting effective, you must enable the setting in both folders.

**Caution:** If enabled, skilled users can take advantage of the permissions this setting grants to change their privileges and gain permanent access to restricted files and folders. Note that the User Configuration version of this setting is not guaranteed to be secure.

The recommended state for this setting is: Disabled.

#### **Rationale:**

Users with limited privileges can exploit this feature by creating a Windows Installer installation package that creates a new local account that belongs to the local built-in Administrators group, adds their current account to the local built-in Administrators group, installs malicious software, or performs other unauthorized activities.

#### **Impact:**

None - this is the default behavior.

**Audit:**

Navigate to the following registry location and confirm it is set to 1. This location confirms that the *Device Configuration Policy* from Intune was received and can also confirm what the winning policy is.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\current\device\ApplicationManagement:MSIAlwaysInstallWithElevatedPrivileges\_ProviderSet

**To confirm that the policy was properly applied to the system, check the following location:**

Navigate to the following registry location and confirm it is set to 0.

HKEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\PolicyManager\Providers\{GUID}\Default\ApplicationManagement:MSIAlwaysInstallWithElevatedPrivileges

**Note:** The GUID can be found in the first registry location mentioned above. The key will contain *ADMXInstanceData* in its name.

## **Remediation:**

To establish the recommended configuration, set the following *Device Configuration Policy* to Disabled:

To access the *Device Configuration Policy* from the Intune Home page:

- Click *Devices*
- Click *Configuration profiles*
- Click *Create profile*
- Select the *platform* (Windows 10 and later)
- Select the *profile* (Custom)
- Click *Create*
- Enter a *Name*
- Click *Next*
- Configure the following *Setting*

```
Name: <Enter name>
Description: <Enter Description>
OMA-URI: ./User/Vendor/MSFT/Policy/Config/ApplicationManagement/
          MSIAlwaysInstallWithElevatedPrivileges
Data type: Integer
Value: 0
```

- Select *OK*
- Continue through the *Wizard* to *complete* the creation of the profile (profile assignments, applicability etc.)

**Note:** More than one configuration setting from each of the *Configuration profiles* (ex: Administrative Templates, Custom etc.) can be added to each *Device Configuration Policy*.

## **Default Value:**

Disabled. (Windows Installer will apply the current user's permissions when it installs programs that a system administrator does not distribute or offer. This will prevent standard users from installing applications that affect system-wide configuration items.)

## **CIS Controls:**

Version 7

### **4.3 Ensure the Use of Dedicated Administrative Accounts**

Ensure that all users with administrative account access use a dedicated or secondary account for elevated activities. This account should only be used for administrative activities and not internet browsing, email, or similar activities.

### ***19.7.43 Windows Logon Options***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WinLogon.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

### ***19.7.44 Windows Mail***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsMail.admx/adml` that is only included with the Microsoft Windows Vista through Windows 10 Release 1703 Administrative Templates.

### ***19.7.45 Windows Media Center***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `MediaCenter.admx/adml` that is only included with the Microsoft Windows Vista through Windows 10 Release 1511 Administrative Templates.

### ***19.7.46 Windows Media Player***

This section is intentionally blank and exists to ensure the structure of Windows benchmarks is consistent.

This Group Policy section is provided by the Group Policy template `WindowsMediaPlayer.admx/adml` that is included with all versions of the Microsoft Windows Administrative Templates.

# Appendix: Summary Table

Control		Set Correctly	
		Yes	No
<b>1</b>	<b>Account Policies</b>		
<b>1.1</b>	<b>Password Policy</b>		
1.1.1	(L1) Ensure 'Enforce password history' is set to '24 or more passwords' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
1.1.2	(L1) Ensure 'Maximum password age' is set to '60 or fewer days, but not 0' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
1.1.3	(L1) Ensure 'Minimum password age' is set to '1 or more day(s)' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
1.1.4	(L1) Ensure 'Minimum password length' is set to '14 or more characters' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
1.1.5	(L1) Ensure 'Password must meet complexity requirements' is set to 'Numbers, lowercase, uppercase and special characters required' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>1.2</b>	<b>Account Lockout Policy</b>		
<b>2</b>	<b>Local Policies</b>		
<b>2.1</b>	<b>Audit Policy</b>		
<b>2.2</b>	<b>User Rights Assignment</b>		
2.2.1	(L1) Ensure 'Access Credential Manager as a trusted caller' is set to 'No One' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.2	(L1) Ensure 'Access this computer from the network' is set to 'Administrators, Remote Desktop Users' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.3	(L1) Ensure 'Act as part of the operating system' is set to 'No One' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.4	(L1) Ensure 'Allow log on locally' is set to 'Administrators, Users' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.5	(L1) Ensure 'Back up files and directories' is set to 'Administrators' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.6	(L1) Ensure 'Change the system time' is set to 'Administrators, LOCAL SERVICE' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.7	(L1) Ensure 'Create a pagefile' is set to 'Administrators' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.8	(L1) Ensure 'Create a token object' is set to 'No One' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.9	(L1) Ensure 'Create global objects' is set to 'Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.10	(L1) Ensure 'Create permanent shared objects' is set to 'No One' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>

Control		Set Correctly	
		Yes	No
2.2.11	(L1) Configure 'Create symbolic links' is set to 'Administrators' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.12	(L1) Ensure 'Debug programs' is set to 'Administrators' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.13	(L1) Ensure 'Deny access to this computer from the network' to include 'Guests, Local account' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.14	(L1) Ensure 'Deny log on locally' to include 'Guests' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.15	(L1) Ensure 'Deny log on through Remote Desktop Services' to include 'Guests, Local account' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.16	(L1) Ensure 'Enable computer and user accounts to be trusted for delegation' is set to 'No One' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.17	(L1) Ensure 'Force shutdown from a remote system' is set to 'Administrators' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.18	(L1) Ensure 'Generate security audits' is set to 'LOCAL SERVICE, NETWORK SERVICE' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.19	(L1) Ensure 'Impersonate a client after authentication' is set to 'Administrators, LOCAL SERVICE, NETWORK SERVICE, SERVICE' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.20	(L1) Ensure 'Increase scheduling priority' is set to 'Administrators, Window Manager\Window Manager Group' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.21	(L1) Ensure 'Load and unload device drivers' is set to 'Administrators' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.22	(L1) Ensure 'Lock pages in memory' is set to 'No One' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.23	(L1) Ensure 'Manage auditing and security log' is set to 'Administrators' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.24	(L1) Ensure 'Modify an object label' is set to 'No One' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.25	(L1) Ensure 'Modify firmware environment values' is set to 'Administrators' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.26	(L1) Ensure 'Perform volume maintenance tasks' is set to 'Administrators' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.27	(L1) Ensure 'Profile single process' is set to 'Administrators' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.28	(L1) Ensure 'Restore files and directories' is set to 'Administrators' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.2.29	(L1) Ensure 'Take ownership of files or other objects' is set to 'Administrators' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>2.3</b>	<b>Security Options</b>		

Control		Set Correctly	
		Yes	No
<b>2.3.1</b>	<b>Accounts</b>		
2.3.1.1	(L1) Ensure 'Accounts: Administrator account status' is set to 'Disabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.1.2	(L1) Ensure 'Accounts: Block Microsoft accounts' is set to 'Users can't add or log on with Microsoft accounts' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.1.3	(L1) Ensure 'Accounts: Guest account status' is set to 'Disabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.1.4	(L1) Ensure 'Accounts: Limit local account use of blank passwords to console logon only' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.1.5	(L1) Configure 'Accounts: Rename administrator account' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.1.6	(L1) Configure 'Accounts: Rename guest account' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>2.3.2</b>	<b>Audit</b>		
<b>2.3.3</b>	<b>DCOM</b>		
<b>2.3.4</b>	<b>Devices</b>		
2.3.4.1	(L1) Ensure 'Devices: Allowed to format and eject removable media' is set to 'Administrators and Interactive Users' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.4.2	(L2) Ensure 'Devices: Prevent users from installing printer drivers' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>2.3.5</b>	<b>Domain controller</b>		
<b>2.3.6</b>	<b>Domain member</b>		
<b>2.3.7</b>	<b>Interactive logon</b>		
2.3.7.1	(L1) Ensure 'Interactive logon: Do not require CTRL+ALT+DEL' is set to 'Disabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.7.2	(L1) Ensure 'Interactive logon: Don't display last signed-in' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.7.3	(L1) Ensure 'Interactive logon: Machine inactivity limit' is set to '900 or fewer second(s), but not 0' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.7.4	(L1) Configure 'Interactive logon: Message text for users attempting to log on' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.7.5	(L1) Configure 'Interactive logon: Message title for users attempting to log on' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>2.3.8</b>	<b>Microsoft network client</b>		
2.3.8.1	(L1) Ensure 'Microsoft network client: Digitally sign communications (always)' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>

Control		Set Correctly	
		Yes	No
2.3.8.2	(L1) Ensure 'Microsoft network client: Digitally sign communications (if server agrees)' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.8.3	(L1) Ensure 'Microsoft network client: Send unencrypted password to third-party SMB servers' is set to 'Disabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>2.3.9</b>	<b>Microsoft network server</b>		
2.3.9.1	(L1) Ensure 'Microsoft network server: Digitally sign communications (always)' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.9.2	(L1) Ensure 'Microsoft network server: Digitally sign communications (if client agrees)' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>2.3.10</b>	<b>Network access</b>		
2.3.10.1	(L1) Ensure 'Network access: Do not allow anonymous enumeration of SAM accounts' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.10.2	(L1) Ensure 'Network access: Do not allow anonymous enumeration of SAM accounts and shares' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.10.3	(L1) Ensure 'Network access: Restrict anonymous access to Named Pipes and Shares' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.10.4	(L1) Ensure 'Network access: Restrict clients allowed to make remote calls to SAM' is set to 'Administrators: Remote Access: Allow' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.10.5	(L1) Ensure 'Network access: Shares that can be accessed anonymously' is set to 'None' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>2.3.11</b>	<b>Network security</b>		
2.3.11.1	(L1) Ensure 'Network security: Allow Local System to use computer identity for NTLM' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.11.2	(L1) Ensure 'Network Security: Allow PKU2U authentication requests to this computer to use online identities' is set to 'Disabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.11.3	(L1) Ensure 'Network security: Do not store LAN Manager hash value on next password change' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
2.3.11.4	(L1) Ensure 'Network security: LAN Manager authentication level' is set to 'Send NTLMv2 response only. Refuse LM & NTLM' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>

Control		Set Correctly	
		Yes	No
2.3.11.5	(L1) Ensure 'Network security: Minimum session security for NTLM SSP based (including secure RPC) clients' is set to 'Require NTLMv2 session security, Require 128-bit encryption' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>2.3.12</b>	<b>Recovery console</b>		
<b>2.3.13</b>	<b>Shutdown</b>		
<b>2.3.14</b>	<b>System cryptography</b>

18.9.5.1	(L1) Ensure 'Let Windows apps activate with voice while the system is locked' is set to 'Disabled' (Automated)	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<b>18.9.6</b>	<b>App runtime</b>		
18.9.6.1	(L1) Ensure 'Allow Microsoft accounts to be optional' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<b>18.9.7</b>	<b>Application Compatibility</b>		
<b>18.9.8</b>	<b>AutoPlay Policies</b>		
18.9.8.1	(L1) Ensure 'Disallow Autoplay for non-volume devices' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input checked="" type="checkbox"/>
18.9.8.2	(L1) Ensure 'Set the default behavior for AutoRun' is set to 'Enabled: Do not execute any autorun commands' (Automated)	<input type="checkbox"/>	<input checked="" type="checkbox"/>
18.9.8.3	(L1) Ensure 'Turn off Autoplay' is set to 'Enabled: All drives' (Automated)	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<b>18.9.9</b>	<b>Backup</b>		
<b>18.9.10</b>	<b>Biometrics</b>		
<b>18.9.11</b>	<b>BitLocker Drive Encryption</b>		
<b>18.9.11.1</b>	<b>Fixed Data Drives</b>		
18.9.11.1.1	(BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Control		Set Correctly	
		Yes	No
18.9.11.1.2	(BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Allow data recovery agent' is set to 'Enabled: True' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.11.1.3	(BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Recovery Password' is set to 'Enabled: Allow 48-digit recovery password' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.11.1.4	(BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Omit recovery options from the BitLocker setup wizard' is set to 'Enabled: True' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.11.1.5	(BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Save BitLocker recovery information to AD DS for fixed data drives' is set to 'Enabled: False' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.11.1.6	(BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Configure storage of BitLocker recovery information to AD DS' is set to 'Enabled: Backup recovery passwords and key packages' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.11.1.7	(BL) Ensure 'Choose how BitLocker-protected fixed drives can be recovered: Do not enable BitLocker until recovery information is stored to AD DS for fixed data drives' is set to 'Enabled: False' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>18.9.11.2</b>	<b>Operating System Drives</b>		
18.9.11.2.1	(BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.11.2.2	(BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Allow data recovery agent' is set to 'Enabled: False' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.11.2.3	(BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Recovery Password' is set to 'Enabled: Require 48-digit recovery password' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.11.2.4	(BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Recovery Key' is set to 'Enabled: Do not allow 256-bit recovery key' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.11.2.5	(BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Omit recovery options from the BitLocker setup wizard' is set to 'Enabled: True' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>

Control		Set Correctly	
		Yes	No
18.9.11.2.6	(BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Save BitLocker recovery information to AD DS for operating system drives' is set to 'Enabled: True' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.11.2.7	(BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Configure storage of BitLocker recovery information to AD DS:' is set to 'Enabled: Store recovery passwords and key packages' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.11.2.8	(BL) Ensure 'Choose how BitLocker-protected operating system drives can be recovered: Do not enable BitLocker until recovery information is stored to AD DS for operating system drives' is set to 'Enabled: True' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.11.2.9	(BL) Ensure 'Require additional authentication at startup' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.11.2.10	(BL) Ensure 'Require additional authentication at startup: Allow BitLocker without a compatible TPM' is set to 'Enabled: False' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>18.9.11.3</b>	<b>Removable Data Drives</b>		
18.9.11.3.1	(BL) Ensure 'Deny write access to removable drives not protected by BitLocker' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.11.3.2	(BL) Ensure 'Deny write access to removable drives not protected by BitLocker: Do not allow write access to devices configured in another organization' is set to 'Enabled: False' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>18.9.12</b>	<b>Camera</b>		
18.9.12.1	(L2) Ensure 'Allow Use of Camera' is set to 'Disabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>18.9.13</b>	<b>Cloud Content</b>		
18.9.13.1	(L1) Ensure 'Turn off Microsoft consumer experiences' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>18.9.14</b>	<b>Connect</b>		
18.9.14.1	(L1) Ensure 'Require pin for pairing' is set to 'Enabled: First Time' OR 'Enabled: Always' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>18.9.15</b>	<b>Credential User Interface</b>		
18.9.15.1	(L1) Ensure 'Do not display the password reveal button' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.15.2	(L1) Ensure 'Enumerate administrator accounts on elevation' is set to 'Disabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>18.9.16</b>	<b>Data Collection and Preview Builds</b>		
18.9.16.1	(L1) Ensure 'Allow Telemetry' is set to 'Enabled: 0 - Security [Enterprise Only]' or 'Enabled: 1 - Basic' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>

Control		Set Correctly	
		Yes	No
18.9.16.2	(L2) Ensure 'Configure Authenticated Proxy usage for the Connected User Experience and Telemetry service' is set to 'Enabled: Disable Authenticated Proxy usage' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.16.3	(L1) Ensure 'Do not show feedback notifications' is set to 'Enabled' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
18.9.16.4	(L1) Ensure 'Toggle user control over Insider builds' is set to 'Disabled' (Manual)	<input type="checkbox"/>	<input type="checkbox"/>
<b>18.9.17</b>	<b>Delivery Optimization</b>		
18.9.17.1	(L1) Ensure 'Download Mode' is NOT set to 'Enabled: Internet' (Automated)	<input type="checkbox"/>	<input type="checkbox"/>
<b>18.9.18</b>	<b>Desktop Gadgets</b>		
<b>18.9.19</b>	<b>Desktop Window Manager</b>		
<b>18.9.20</b>	<b>Device and Driver Compatibility</b>		
<b>18.9.21</b>	<b>Device Registration (formerly Workplace Join)</b>
